Intelligent Design And Manufacturing:

Intelligent Design and Manufacturing Andrew Kusiak, 1992 Focuses on design and manufacturing and a variety of issues pertinent to successful techniques involving concurrent engineering Considers product design and manufacturing constraints simultaneously emphasizing the consideration of every element of the product's life cycle from concept through disposal Examines such areas as quality cost scheduling and user needs Design and manufacturing problems are thoroughly discussed and solutions are given by using numerous modern applications and implements including basic artificial intelligence tools

Intelligent Design and Manufacturing for Prototyping Amit Bagchi (ed), American Society of Mechanical Engineers. Winter Annual Meeting, 1991 **Intelligent Design Using Expertise Knowledge, Manufacturing Data, and Legacy Codes**, 1998 The mission of the national laboratories has changed from weapon design and production to stockpile maintenance Design engineers are becoming few in number and years worth of experience is about to be lost What will happen when new weapons are designed or retrofits need to be made Who will know the lessons learned in the past What process will be followed When and what software codes should be used Intelligent design is the answer to the questions posed above for weapon design for any design An interactive design development environment will allow the designers of the future access to the knowledge of yesterday today and tomorrow Design guides rules of thumb lessons learned production capabilities production data process flow and analysis codes will be included in intelligent design An intelligent design environment is being developed as a heuristic knowledge based system and as a diagnostic design tool The system provides the framework for incorporating rules of thumb from experienced design engineers available manufacturing processes including the newest ones and manufacturing databases with current data to help reduce design margins The system also has the capability to access analysis and legacy codes appropriately A modular framework allows for various portions to be added or deleted based on the application This paper presents the driving forces for developing an intelligent design environment and an overview of the system This overview will include the system architecture and how it relates to the capture and utilization of design and manufacturing knowledge The paper concludes with a discussion of realized and expected benefits

Multi-Agent Systems for Concurrent Intelligent Design and Manufacturing Weiming Shen,Douglas H. Norrie,J-P. Barthes,2003-09-02 Agent Technology or Agent Based Approaches is a new paradigm for developing software applications It has been hailed as the next significant breakthrough in software development and the new revolution in software after object technology or object oriented programming In this context an agent is a computer system which is capable of acting autonomously in its environment in order to meet its design objectives So in the area of concurrent design and manufacturing a manufacturing resource namely a machine or an operator may cooperate and negotiate with other agents for task assignment and an existing engineering software can be integrated with a distributed integrated engineering design and manufacturing system Hence in agent based systems there is no centralized system control structure and no pre defined agenda for the system execution as exist in traditional systems This book systematically describes the principles key issues and applications of agent technology in relation to concurrent engineering design and manufacturing It introduces the methodology standards frameworks tools and languages of agent based approaches and presents a general procedure for building agent based concurrent engineering design and manufacturing systems Both professional and university researchers and postgraduates should find this an invaluable presentation of the corresponding theories and methods with some practical examples for developing multi agent systems in the domain
