*Interacting Code Motion Transformations: Their Impact and Their Complexity* Oliver Rüthing, 2007-12-03 Code motion techniques are integrated in many optimizing production and research compilers They are still a major topic of ongoing research in program optimization but traditional methods are restricted by a narrow focus on their immediate effects A more ambitious approach is to investigate the interdependencies between distinct component transformations This monograph provides a comprehensive account of the methods most accepted in practice for program analysis and program transformation for imperative languages It also develops a scenario systematically and step by step which overcomes the structural restrictions that had previously long resisted attack The author presents formal proofs for all the steps leading to this breakthrough though the reader may skip the proofs and consult the technical details as needed yet still enjoy a smooth introduction to the central principles of code motion

**Lectures on Petri Nets II: Applications** Wolfgang Reisig, Grzegorz Rozenberg, 1998-11-04 The two volume set originates from the Advanced Course on Petri Nets held in Dagstuhl Germany in September 1996 beyond the lectures given there additional chapters have been commissioned to give a well balanced presentation of the state of the art in the area Together with its companion volume *Lectures on Petri Nets I Basic Models* this

book is the actual reference for the area and addresses professionals students lecturers and researchers who are interested in systems design and would like to learn to use Petri nets familiar with subareas of the theory or its applications and wish to view the whole area interested in learning about recent results presented within a unified framework planning to apply Petri nets in practical situations interested in the relationship of Petri nets to other models of concurrent systems     *Program Analysis and Compilation, Theory and Practice* Thomas Reps, Mooly Sagiv, Jörg Bauer, 2007-06-05 Reinhard Wilhelm's career in Computer Science spans more than a third of a century This Festschrift volume published to honor him on his 60th Birthday on June 10 2006 includes 15 refereed papers by leading researchers his graduate students and research collaborators as well as current and former colleagues who all attended a celebratory symposium held at Schloss Dagstuhl Germany     **Static Analysis** Giorgio Levi, 1998-09-02 This book constitutes the refereed proceedings of the 5th International Symposium on Static Analysis SAS 98 held in Pisa Italy in September 1998 The 20 revised full papers presented were carefully reviewed and selected from a total of 48 submissions Also included is an invited tutorial The papers are organized in topical sections on data flow analysis logic programming concurrency abstract domains partial evaluation type inference and optimization The invited tutorial by David Schmidt and Bernhard Steffen is entitled data flow analysis as model checking of abstract interpretations     Optimal Interprocedural Program Optimization Jens Knoop, 2003-06-26 Starting from the intraprocedural basic case this monograph focuses on interprocedural optimization It emphasizes the analogies and essential differences between intraprocedural and interprocedural optimization and offers cookbook style support for constructing the underlying algorithms It is aimed at compiler constructors and researchers interested in the systematic transfer of intraprocedural optimizations to the interprocedural setting as well as students seeking a gentle introduction to the field     **Correct System Design** Ernst-Rüdiger Olderog, Bernhard Steffen, 1999-09-22 Computers are gaining more and more control over systems that we use or rely on in our daily lives privately as well as professionally In safety critical applications as well as in others it is of paramount importance that systems controlled by a computer or computing systems themselves reliably behave in accordance with the specification and requirements in other words here correctness of the system of its software and hardware is crucial In order to cope with this challenge software engineers and computer scientists need to understand the foundations of programming how different formal theories are linked together how compilers correctly translate high level programs into machine code and why transformations performed are justifiable This book presents 17 mutually reviewed invited papers organized in sections on methodology programming automation compilation and application     Proceedings , 1998     **20 Years of the ACM SIGPLAN Conference on Programming Language Design and Implementation** Kathryn S. **Data Access and Storage Management for Embedded Programmable Processors** Francky Catthoor, K. Danckaert, K.K. Kulkarni, E. Brockmeyer, Per Gunnar Kjeldsberg, T. van Achteren, Thierry Omnes, 2013-03-14 Data Access and Storage Management for Embedded Programmable Processors gives an overview of the state of the art in system level data access and storage management for embedded programmable processors The targeted application domain covers complex embedded real time multi media and communication applications Many of these applications are data dominated in the sense that their cost related aspects namely power consumption and footprint are heavily influenced if not dominated by the data access and storage aspects The material is mainly based on research at IMEC in this area in the period 1996 2001 In order to deal with the stringent timing requirements and the data dominated characteristics of this domain we have adopted a target architecture style that is compatible with modern embedded processors and we have developed a systematic step wise methodology to make the exploration and optimization of such applications feasible in a source to source precompilation approach

**Worst-Case Execution Time Aware Compilation Techniques for Real-Time Systems** Paul Lokuciejewski, Peter Marwedel, 2010-09-24 For real time systems the worst case execution time WCET is the key objective to be considered Traditionally code for real time systems is generated without taking this objective into account and the WCET is computed only after code generation Worst Case Execution Time Aware Compilation Techniques for Real Time Systems presents the first comprehensive approach integrating WCET considerations into the code generation process Based on the proposed reconciliation between a compiler and a timing analyzer a wide range of novel optimization techniques is provided Among others the techniques cover source code and assembly level optimizations exploit machine learning techniques and address the design of modern systems that have to meet multiple objectives Using these optimizations the WCET of real time applications can be reduced by about 30% to 45% on the average This opens opportunities for decreasing clock speeds costs and energy consumption of embedded processors The proposed techniques can be used for all types real time systems

including automotive and avionics IT systems
