Exploring Macrophage Roles in Cancer Progression and Therapeutic Targeting Yu Kato, George S. Karagiannis, David Entenberg, 2025-05-21 Macrophages are a pivotal component of the immune system known for their versatility and essential roles in development tissue repair and immune responses In the context of cancer

macrophages exhibit dual roles they can contribute to antitumor immunity or conversely promote tumor progression and metastasis Tumor associated macrophages TAMs within the primary tumor microenvironment are known to facilitate tumor malignancy while metastasis associated macrophages MAMs aid in tumor cell survival and dissemination to distant organs Despite the approval of immune checkpoint inhibitors for various cancer types refractory cancers remain a significant challenge highlighting the need for novel therapeutic strategies Recent studies have underscored the importance of targeting macrophages and their associated molecules as potential anticancer and antimetastatic therapies However a comprehensive understanding of macrophage biology in cancer initiation and metastasis is still lacking necessitating further investigation into their roles and therapeutic potential This research topic aims to elucidate the roles of macrophages in tumor initiation and metastasis with a focus on exploring their potential as therapeutic targets By investigating the complex interactions between macrophages and cancer cells this research seeks to address the unmet needs in refractory cancers and develop innovative strategies for cancer prevention and treatment Key questions include how macrophages contribute to cancer progression and how their biology can be modulated to inhibit tumor growth and metastasis

Exploring the Interaction between Health-promoting and Health Risk Behaviours in Health Huixuan Zhou, Feng Jiang, Yi-lang Tang, 2024-05-28

Health related behaviours play positive or negative roles in people's health For instance health risk behaviours such as sedentary behaviours e.g binge watching TV and playing computer games the use of alcohol tobacco or other substances and lack of sleep have been found to negatively affect the physical and mental health of people On the other hand some studies show that health promoting behaviours such as physical activity and healthy dietary habits can mitigate or reverse the negative effects of health risk behaviours on health outcomes In the meantime some studies indicate that the harmful effects of some health risk behaviours may not be mitigated by health promoting behaviours For instance some studies show that sedentary behaviours and physical activity are independently associated with some physical and mental health outcomes interventions to increase physical activity with and without decreasing sedentary time lead to different health outcomes Clearly more research is needed to show the interaction between health promoting behaviours and health risk behaviours in health which could shed light on the management of health related behaviours
