**Interest Rate Swaps** Nasser Saber, 1994 In little more than a decade the interest rate swap market has grown from zero to a phenomenal size of nearly 4 trillion Corporate users in virtually all segments of the economy now find swaps the instrument of choice for a variety of trading hedging and funding activities Yet the very ease with which they can be adapted in different capacities lends an air of mystery to swaps Many who have used an interest rate swap to meet a particular goal find that the same instrument was used at another time to meet a very different market need Thus swaps despite their convenience and popularity are still commonly referred to as complex or arcane Interest Rate Swaps Valuation Trading and Processing dispels the mystery surrounding these versatile tools showing how they evolved naturally within the international financial marketplace and pointing out the similarities between swaps and more conventional treasury products Interest Rate Swaps shows that valuation pricing and portfolio management of swaps likewise follow the most basic principles of finance This coherent overview also focuses on new issues specifically related to swaps such as accounting and taxation credit risk and capital adequacy requirement and systems and back office processing Presenting each chapter from the point of view of hands on practitioners in the swap market Interest Rate Swaps offers a macro to micro format with each chapter beginning with general background and then gradually moving to operational details a description of different interest rate swaps and their applications numerous examples of valuation accounting and credit exposure calculation with a description of the numerical methods used in these areas a checklist for running a successful swap back office and reconciliation and control methods between front and back office systems Interest Rate Swaps is the first ever coherent overview of swaps that offers users a full perspective on different aspects of these versatile instruments

Behind the Swap Andrew DeJoy, 2022-05-10 Andrew DeJoy's Behind the Swap offers a middle office perspective on the risks and miscommunications in post trade

processing and provides a framework and solutions for a better approach In August of 2020 Citibank made one of the worst mistakes in banking history it accidentally sent out almost 900 million of its own funds Many of the recipients didn't give back the money Citibank sued And a federal court ruled that the recipients could keep the funds Citibank's error is not surprising The underlying contributors that led to the mistaken payment permeate the global financial services industry Manual data entry decades old technological infrastructure inadequate training and systems that can't interact with one another are just a few of the problems that face post trade processing the machinery behind financial markets Unfortunately years of neglect by regulators and financial institutions themselves has left this infrastructure needlessly complex astoundingly inefficient frequently inaccurate and woefully inadequate for modern financial markets The problems are easy to see but difficult to admit For financial institutions the current system costs billions of dollars each year in labor systems maintenance and lost funds For regulators the current system precludes the ability to track systemic risk It also artificially inflates the stability of the global financial system For lawyers and prosecutors the current system allows ample opportunity for unlawful misconduct such as rogue trading and fraud Andrew DeJoy's *Behind the Swap* examines the risks involved in post trade processing in swaps and derivative markets and provides solutions to better control those risks While Andrew doesn't claim to have all the answers he does believe there is a better system that is both achievable and necessary
