**GPRS Networks** Geoff Sanders, Lionel Thorens, Manfred Reisky, Oliver Rulik, Stefan Deylitz, 2003-10-10 GPRS is a packet based wireless communication service that offers data rates from 9.05 up to 171.2 Kbps and continuous connection to the Internet

for mobile phone and computer users GPRS is based on GSM communications and complements existing services such as circuit switched cellular phone connections and the Short Message Service SMS GPRS represents the bridge between 2G and 3G mobile telecommunications and is commonly referred to as 2.5G Implementation of GPRS requires modification of the existing GSM networks in that GSM is a circuit switched technology while GPRS is packet oriented GPRS enables packet data the same as is used by an Ethernet LAN WAN or the Internet to be sent to and from a mobile station e.g. mobile phone PDA or Laptop WAP and SMS can also be sent using GPRS and individuals working with GPRS need to learn and understand how the mobile stations the air interface network architecture protocol structures and signalling procedures must be modified GPRS offers much higher data rates than GSM and can be combined with 3G technologies such as EDGE to give even higher bit rates It offers many benefits for customers and network operators such as volume rather than time dependent billing and more efficient use of network resources Due to the worldwide delay in implementing 3G solutions such as CDMA and UMTS the demand for GPRS is still growing GPRS Networks Offers detailed information ranging from standards to practical implementation Answers how and why rather than just simply re stating GPRS specifications Provides comprehensive coverage in a single volume Essential reading for all telecommunications project managers field engineers technical staff in network operator and manufacturing organisations GPRS application and service developers Datacoms IT engineers The comprehensive coverage also makes this a superb reference for students of computer science telecommunications and electrical engineering

*EU Competition Law, Data Protection and Online Platforms: Data as Essential Facility* Inge Graef, 2016-10-17. All are agreed that the digital economy contributes to a dynamic evolution of markets and competition. Nonetheless, concerns are increasingly raised about the market dominance of a few key players. Because these companies hold the power to drive rivals out of business, regulators have begun to seek scope for competition enforcement in cases where companies claim that withholding data is needed to satisfy customers and cut costs. This book is the first focus on how competition law enforcement tools can be applied to refusals of dominant firms to give access to data on online platforms such as search engines, social networks, and e-commerce platforms, commonly referred to as the gatekeepers of the Internet. The question arises whether the denial of a dominant firm to grant competitors access to its data could constitute a refusal to deal and lead to competition law liability under the so-called essential facilities doctrine, according to which firms need access to shared knowledge in order to be able to compete. A possible duty to share data with rivals also brings to the forefront the interaction of competition law with data protection legislation, considering that the required information may include personal data of individuals. Building on the refusal to deal concept and using a multidisciplinary approach, the analysis covers such issues and topics as the following: data portability, interoperability, data as a competitive advantage or entry barrier in digital markets, market definition and dominance with respect to data, disruptive versus sustaining innovation, role of intellectual property regimes, economic trade-off in essential facilities cases, relationship of competition enforcement with data protection law, and data-related competition concerns in merger cases. The author draws on a wealth of relevant material, including EU and US decision-making, practice, case law, and policy documents, as well as economic and empirical literature on the link between competition and innovation. The book concludes with a proposed framework for the application of the essential facilities doctrine to potential forms of abuse of dominance relating to data. In addition, it makes suggestions as to how data protection interests can be integrated into competition policy. An invaluable contribution to ongoing academic and policy discussions about how data-related competition concerns should be addressed under competition law, the analysis clearly demonstrates how existing competition tools for market definition and assessment of dominance can be applied to online platforms. It will be of immeasurable value to the many jurists, business persons, and academics concerned with this very timely subject.
