

There's a trick to the Graceful Exit. It begins with the vision to recognize when a job, a life stage, a relationship is over - and to let go. It means leaving what's over without denying its validity or its past importance in our lives.

Visions of the End of the Cold War in Europe, 1945-1990 Frédéric Bozo, Marie-Pierre Rey, N. Piers Ludlow, Bernd Rother, 2012-03-01 Exploring the visions of the end of the Cold War that have been put forth since its inception until its actual ending, this volume brings to the fore the reflections, programmes and strategies that were intended to call into question the bipolar system and replace it with alternative approaches or concepts. These visions were associated not only with prominent individuals, organized groups and civil societies but were also connected to specific historical processes or events. They ranged from actual, thoroughly conceived programmes to more blurred utopian aspirations or simply the belief that the Cold War had already in effect come to an end. Such visions reveal much about the contexts in which they were developed and shed light on crucial moments and phases of the Cold War.

Astroparticle Physics - Proceedings Of The International School Dimitri V Nanopoulos, 1991-11-15 The interface between particle physics and cosmology, known as astroparticle physics, can play a key role in our understanding of the universe. This international school, cosponsored by the Houston Advanced Research Center (HARC) and the Superconducting Super Collider Laboratory (SSC), was proposed as an effort to coordinate the explosion in knowledge and attract researchers to this fascinating discipline.

Current Topics In Astrofundamental Physics - 1st Course In The International School Of Astrophysics "D Chalonge" Normalized Sanchez, 1992-11-20 This volume provides an updated understanding of the progress and current problems in the interplay between fundamental physics, astrophysics and cosmology. In the last years, the cross-section between these fields has been increasing both at the theoretical and experimental levels: particle physics experiments, astronomical observations, space satellite data. Such interplay has fruitfully influenced research activity, setting up Astrofundamental physics. Topics covered in this volume are: early universe, large scale structure of the universe, dark matter problem, cosmic microwave background radiation, gravitational wave astronomy and neutrino astrophysics. The interrelation between these topics is important and a source of problems at the frontiers of present knowledge and experimental limits. Latest available data are constraining theory and models in these topics. The book reviews achievements, confronts theory and models with observations and provides information on the latest developments and discussions on future prospects. It also

includes a section on stellar spectroscopy and spectrophotometry which covers Daniel Chalonge's work as well as present progress and future prospects in these fields
