*Developments In Language Theory: Foundations, Applications, And Perspectives - Proceedings Of The 4th International Conference* Grzegorz Rozenberg,W Thomas,2000-11-07 The theory of formal languages is one of the oldest branches of theoretical computer science Its original aim in the fifties and sixties was to clarify the laws and algorithms that underlie the definition and compilation of programming languages Since then formal language theory has changed very much Today it includes mathematical topics like combinatorics of words word equations and coding theory but it also covers connections to linguistics for example the study of contextual grammars new computational paradigms like DNA computing and a wide range of applications among them hypertext processing database theory and formal program verification Many of these themes of modern formal language theory are represented in this volume *Grammatical Inference* Vasant Honavar,1998-07 This book constitutes the refereed proceedings of the Fourth International Colloquium on Grammatical Inference ICGI 98 held in Ames Iowa in July 1998 The 23 revised full papers were carefully reviewed and selected for inclusion in the book from a total of 35 submissions The book addresses a wide range of grammatical inference theory such as automata induction grammar induction automatic language acquisition etc as well as a variety of applications in areas like syntactic pattern recognition adaptive intelligent agents diagnosis computational biology data mining and knowledge discovery *Advances in Artificial Life* Jozef Kelemen,Petr Sosik,2001-08-29 This book constitutes the refereed proceedings of the 6th European Conference on Artificial Life ECAL 2001 held in Prague Czech Republic in September 2001 The 54 revised papers and 25 posters presented together with five invited papers were carefully reviewed and selected from

numerous submissions The book reflects the state of the art in ALife It is divided into topical sections on agents in environments artificial chemistry cellular and neural systems collaborative systems evolution robotics vision visualization language and communication and miscellaneous

**Grammar Systems** Erzsebet Csuhaj-Varju, Jurgen Dassow, Jozef Kelemen, Gheorghe Paun, 2018-12-07 First Published in 1994 The central problem of the classic formal language theory concerns the generation the recognition of languages by grammars automata respectively However in present day computer science in artificial intelligence in cognitive psychology and in other related fields we have to deal more and more with complex tasks distributed among a set of processors which are working together in a well defined way Parallel computers computer nets distributed data bases and knowledge sources are practical materializations of this idea Similarly the psychologists speak about the modularity of mind in problem solving theories there appear many models based on cognitive agents cooperation As the formal language theory is involved in most of these circumstances for example as a theoretical framework well developed from a mathematical point of view for modelling aspects whose essence can be captured at the level of symbol systems of the syntax of collections of strings of abstract symbols a clear challenge appears for it to consider systems of grammars automata working together for generating recognizing a language In this context notions such as distribution cooperation communication concurrency synchronization parallelism etc should be formalized and enlightened The present monograph is an attempt to answer this challenge

*Formal Languages and Applications* Carlos Martin-Vide, Victor Mitran, Gheorghe Păun, 2013-03-09 Formal Languages and Applications provides a comprehensive study aid and self tutorial for graduates students and researchers The main results and techniques are presented in an readily accessible manner and accompanied by many references and directions for further research This carefully edited monograph is intended to be the gateway to formal language theory and its applications so it is very useful as a review and reference source of information in formal language theory

disciplinary applications of different modern engineering fields can result in synergistic effects Information technology and computer modeling are the underlying tools that play a major role at any stages of developing intelligent systems Chapters in the present volume have been written by eminent scientists from different parts of the world dealing with challenging problems for efficient modeling of intelligent systems The reader can find different characteristics and methodologies of computational intelligence with real life applications Various facets of intelligent engineering and information technology are addressed Starting with theoretical issues from pseudo analysis to parametric classes of digital fuzzy conjunctions for hardware implementation of fuzzy systems diverse aspects of control including quantum as well as fuzzy control and hybrid approaches intelligent robotics dealing with mobile and autonomous robots and new trends approaches and results on information technology machines materials and manufacturing and issues of intelligent systems and complex processes are covered

*Multi-Agent Systems* Faisal Alkhateeb, Eslam Al Maghayreh, Iyad Abu Doush, 2011-04-01 A multi agent system MAS is a system composed of multiple interacting intelligent agents Multi agent systems can be used to solve problems which are difficult or impossible for an individual agent or monolithic system to solve Agent systems are open and extensible systems that allow for the deployment of autonomous and proactive software components Multi agent systems have been brought up and used in several application domains

Grammars and Automata for String Processing Carlos Martin-Vide, Victor Mitrana, 2004-11-23 The conventional wisdom was that biology influenced mathematics and computer science But a new approach has taken hold that of transferring methods and tools from computer science to biology The reverse trend is evident in Grammars and Automata for String Processing From Mathematics and Computer Science to Biology and Back The contributors address the structural syntactical view of the domain Mathematical linguistics and computer science can offer various tools for modeling complex macromolecules and for analyzing and simulating biological issues This collection is valuable for students and researchers in biology computer science and applied mathematics
