**User-Centred Design of Systems** Jan Noyes, Chris Baber, 2012-12-06 System design has conventionally been the province of engineers and the approaches taken to the design of systems have conventionally led to formal specification of the system The past decade or two has seen the rise of another approach that of human computer interaction HCI Given the number of incidents and accidents which are attributed to human error it is sensible to develop an approach to system design which views humans as an essential element in the system Thus an important aspect of designing systems is the study of the interaction between humans and the technology that they use In terms of bringing computers and computing to a wide audience the 1980s were the boom years The first personal computer PC was launched onto the market in February 1978 and since then PCs have become a common place feature of our homes offices schools retail outlets hospitals banks etc Within Western society today there are very few organisations that have not been infiltrated by computer technology and few individuals who have not had experience of computers However the increase in use of computers has not been matched with a corresponding spread of training of users much of the human computer interaction research has sought to design systems which do not require special training i e which people can simply walk up to and use Not surprisingly this has resulted in a number of difficulties some of which have yet to be satisfactorily resolved

**Hagenberg Business Process Modelling Method** Felix Kossak, Christa Illibauer, Verena Geist, Christine Natschläger, Thomas Ziebmayer, Bernhard Freudenthaler, Theodorich Kopetzky, Klaus-Dieter Schewe, 2016-04-27 This book presents a proposal for designing business process management BPM systems that comprise much more than just process modelling Based on a purified Business Process Model and Notation BPMN variant the authors present proposals for several important issues in BPM that have not been adequately considered in the BPMN 2.0 standard It focusses on modality as well as actor and user interaction modelling and offers an enhanced communication concept In order to render models executable the semantics of the modelling language needs to be described rigorously enough to prevent deviating interpretations by different tools For this reason the semantics of the necessary concepts introduced in this book are defined using the Abstract State Machine ASM method Finally the authors show how the different parts of the model fit together using a simple example process and

introduce the enhanced Process Platform eP2 architecture which binds all the different components together The resulting method is named Hagenberg Business Process Modelling H BPM after the Austrian village where it was designed The motivation for the development of the H BPM method stems from several industrial projects in which business analysts and software developers struggled with redundancies and inconsistencies in system documentation due to missing integration The book is aimed at researchers in business process management and industry 4 0 as well as advanced professionals in these areas
