are challenging and demanding present issues in many domains like soil sciences hydrology water management water quality management ecology The mathematical modelling required by these processes revealed from the beginning interesting and difficult mathematical problems so that the attention was redirected to the theoretical mathematical aspects involved Then the qualitative results found were used for the explanation of certain behaviours of the physical processes which had made the object of the initial study and for giving answers to the real problems that arise in the soil science practice In this way the work evidences a perfect topic for an applied mathematical research This book was written in the framework of my research activity within the Institute of Mathematical Statistics and Applied Mathematics of the Romanian Academy
