Integral Representations And Structure Of Finite Group Rings:

Integral Representations and Structure of Finite Group Rings Klaus W. Roggenkamp, 1980 This is an extended version of a series of eight lectures presented in the Séminaire de mathématiques supérieures of the Université de Montréal in 1979 Readers should be familiar with homological algebra but the text does not assume any familiarity with integral representation theory Most of the needed machinery and their proofs are included Integral Representations and Applications Klaus W. Roggenkamp, 2006-11-14 **Structure Theorems of Unit Groups** Eric Jespers, Ángel del Río, 2015-11-13 This two volume graduate textbook gives a comprehensive state of the art account of describing large subgroups of the unit group of the integral group ring of a finite group and more generally of the unit group of an order in a finite dimensional semisimple rational algebra Since the book is addressed to graduate students as well as young researchers all required background on these diverse areas both old and new is included Supporting problems illustrate the results and complete some of the proofs Volume 1 contains all the details on describing generic constructions of units and the subgroup they generate Volume 2 mainly is about structure theorems and geometric methods Without being encyclopaedic all main results and techniques used to achieve these results are included Basic courses in group theory ring theory and field theory are assumed as background Infinite Groups And Group Rings - Proceedings Of The Ams Special Session Jon M Corson, Martyn R Dixon, Martin J Evans, Frank D Roehl, 1993-09-07 This proceedings volume consists of contributed papers which deal with diverse topics ranging from logical questions to geometric methods and covering both integral group rings and group algebras Some papers are research announcements or of a descriptive nature while others are research papers *Representation Theory of Finite Groups and Associative Algebras* Charles W. Curtis, Irving Reiner, 2006 Provides an introduction to various aspects of the representation theory of finite groups This book covers such topics as general non commutative algebras Frobenius algebras representations over non algebraically closed fields and fields of non zero characteristic and integral representations Representation Theory II. Proceedings of the Fourth International Conference on Representations of Algebras, held in Ottawa, Canada, August 16-25, 1984 Vlastimil Dlab, Peter Gabriel, Gerhard Michler, 2006-11-14 Proceedings of the International Conference on Algebra Dedicated to the Memory of A. I. Mal'cev Leonid A. Bokut', A. I. Kostrikin, 1992 **Linear Representations of Partially Ordered Sets and Vector Space Categories** Daniel Simson, 1993-01-01 This volume provides an elementary yet comprehensive introduction to representations of partially ordered sets and bimodule matrix problems and their use in representation theory of algebras It includes a discussion of representation types of algebras and partially ordered sets Various characterizations of representation finite and representation tame partially ordered sets are offered and a description of their indecomposable representations is given Auslander Reiten theory is demonstrated together with a computer accessible algorithm for determining indecomposable representations and the Auslander Reiten quiver of any representation finite partially ordered

set **Group Rings and Class Groups** K.W. Roggenkamp, M.J. Taylor, 2012-12-06 The first part of the book centers around the isomorphism problem for finite groups i.e. which properties of the finite group G can be determined by the integral group ring $\mathbb{Z}G$ The authors have tried to present the results more or less self-contained and in as much generality as possible concerning the ring of coefficients In the first section the class sum correspondence and some related results are derived This part is the proof of the subgroup rigidity theorem Scott Roggenkamp Weiss which says that a finite subgroup of the p -adic integral group ring of a finite p -group is conjugate to a subgroup of the finite group A A counterexample to the conjecture of Zassenhaus that group basis are rationally conjugate is presented in the semilocal situation Scott Roggenkamp To this end an extended version of Clifford theory for p -adic integral group rings is presented Moreover several examples are given to demonstrate the complexity of the isomorphism problem The second part of the book is concerned with various aspects of the structure of rings of integers as Galois modules It begins with a brief overview of major results in the area thereafter the majority of the text focuses on the use of the theory of Hopf algebras It begins with a thorough and detailed treatment of the required foundational material and concludes with new and interesting applications to cyclotomic theory and to elliptic curves with complex multiplication Examples are used throughout both for motivation and also to illustrate new ideas

Representation Theory of Finite Groups and Finite-Dimensional Algebras Michler, Ringel, 2012-12-06 From April 1 1984 until March 31 1991 the Deutsche Forschungsgemeinschaft has sponsored the project Representation Theory of Finite Groups and Finite Dimensional Algebras The proposal for this project was submitted by B Huppert Mainz B Fischer Bielefeld G Michler Essen H Pahlings Aachen and C M Ringel Bielefeld in order to strengthen the interaction between the different research areas in representation theory The Deutsche Forschungsgemeinschaft has given many research positions and fellowships for young algebraists enabling them to do research at their own universities or as visitors at well known research institutions in America Australia England and France The whole project benefitted very much from an extensive exchange programme between German and American scientists sponsored by the Deutsche Forschungsgemeinschaft and by the National Science Foundation of the United States This volume presents lectures given in a final conference and reports by members of the project It is divided into two parts The first part contains seven survey articles describing recent advances in different areas of representation theory These articles do not only concentrate on the work done by the German research groups but also inform on major developments of the subject at all The volume omits those topics already treated in book form In particular it does not contain a survey on K **Group Rings of Finite Groups Over p -adic Integers** Wilhelm Plesken, 1983-10

Orders and Generic Constructions of Units Eric Jespers, Ángel del Río, 2015-11-13 This two volume graduate textbook gives a comprehensive state of the art account of describing large subgroups of the unit group of the integral group ring of a finite group and more generally of the unit group of an order in a finite dimensional semisimple

rational algebra Since the book is addressed to graduate students as well as young researchers all required background on these diverse areas both old and new is included Supporting problems illustrate the results and complete some of the proofs Volume 1 contains all the details on describing generic constructions of units and the subgroup they generate Volume 2 mainly is about structure theorems and geometric methods Without being encyclopaedic all main results and techniques used to achieve these results are included Basic courses in group theory ring theory and field theory are assumed as background
