Parallel Computer Vision Leonard Uhr, 2014-08-05 [Parallel Computer Vision](#) [The SIMD Model of Parallel Computation](#)

Robert Cypher, Jorge L.C. Sanz, 2012-12-06 1 1 Background There are many paradigmatic statements in the literature claiming that this is the decade of parallel computation A great deal of research is being devoted to developing architectures and algorithms for parallel machines with thousands or even millions of processors Such massively parallel computers have been made feasible by advances in VLSI very large scale integration technology In fact a number of computers having over one thousand processors are commercially available Furthermore it is reasonable to expect that as VLSI technology continues to improve massively parallel computers will become increasingly affordable and common However despite the significant progress made in the field many fundamental issues still remain unresolved One of the most significant of these is the issue of a general purpose parallel architecture There is currently a huge variety of parallel architectures that are either being built or proposed The problem is whether a single parallel computer can perform efficiently on all computing applications [Image Understanding Workshop](#) ,1990 [Visual Information Representation, Communication, and Image Processing](#)

Ya-Qin Zhang, 1999-05-25 Discusses recent advances in the related technologies of multimedia computers videophones video over Internet HDTV digital satellite TV and interactive computer games The text analyzes ways of achieving more effective navigation techniques data management functions and higher throughput networking It synthesizes data on visual information venues tracking the enormous commercial potential for new components and compatible systems
