Non-chemical Methods for Disinfestation of Stored Products M Loganathan, Jeyan Moses, 2025-05-05 This reference book covers traditional and recent technologies in the disinfestation of stored foods. Storage of durables is challenging and demands scientific management protocols. Chemical fumigants have been used for decades and several reports detail their impact on the environment in addition to other concerns. This book focuses on the use of non-chemical methods of disinfestation in durables like cereals, pulses, oilseeds, millets and spices. It discusses important disinfestation techniques like biological control, extreme temperature based approaches, insect repellent packaging and nano based techniques. The book also covers the detection of pests and some chemical methods of disinfestation. It is an important reference for professionals, researchers, industry personnel and post graduate students in the field of food and grain storage.

Key Features: Focuses on the non-chemical methods for grain disinfestation. Reviews the rising need for a shift to non-chemical methods of disinfestation of stored foods. Includes a blend of topics on entomology, food engineering, food design and regulations. Discusses conventional methods of disinfestation as well as chemical approaches. Covers topics like extreme temperature based approaches, dielectric heating, insect traps and use of inert materials.

Alternatives to Pesticides in Stored-Product IPM Bhadriraju Subramanyam, David W. Hagstrum, 2012-12-06 Insects associated with raw grain and processed food cause qualitative and quantitative losses. Preventing these losses caused by stored product insects is essential from the farmer's field to the consumer's table. While traditional pesticides play a significant role in stored product integrated pest management (IPM), there has recently been and will continue to be a greater emphasis on alternative approaches. Alternatives to Pesticides in Stored Product IPM details the most promising methods ranging from extreme temperatures to the controversial radiation and from insect resistant packaging to pathogens. This collection is essential for anyone in academia, industry or government interested in pest ecology or food or grain science.
