Research Report ,2001 The Virtual Sand Table ,2001 This report examines the application of an intelligent tutoring system ITS for use in training a complex skill during the Field Artillery Captains Career Course Based on a technology transfer agreement between the U S Army Training and Doctrine Command and the U S Army Research institute for the Behavioral and Social Sciences an ITS originally developed for the Navy was adapted for use in a sand table exercise The exercise required students to deploy multiple launch rocket system assets during a reconnaissance and selection of position task The task was conventionally taught using miniature replications of vehicles and launchers on a large table of sand An ITS version of the exercise called the Virtual Sand Table replicated the training with the added advantage of informative feedback and computer based coaching during the exercise A comparison group n 209 used the conventional sand table and the treatment group n 105 used the Virtual Sand Table during a four hour training exercise Results as measured by a hands on performance test indicated superior performance by the Virtual Sand Table treatment group with an effect size of just over one standard deviation Stinet *Expert Systems and Intelligent Computer-aided Instruction*

Educational Technology Magazine Staff, 1991 *Assessment of Problem Solving Using Simulations* Eva Baker, Jan Dickieson, Wallace Wulfeck, Harold F. O'Neil, 2017-09-25 This volume explores the application of computer simulation technology to measurement issues in education especially as it pertains to problem based learning Whereas most assessments related to problem solving are based on expensive and time consuming measures i e think aloud protocols or performance assessments that require extensive human rater scoring this book relies on computerization of the major portion of the administration scoring and reporting of problem solving assessments It is appropriate for researchers

Computers As Cognitive Tools Susanne P. Lajoie, Sharon J. Derry, 2013-05-13 Highlighting and illustrating several important and interesting theoretical trends that have emerged in the continuing development of instructional technology this book's organizational framework is based on the notion of two opposing camps One evolves out of the intelligent tutoring movement which employs artificial intelligence technologies in the service of student modeling and precision diagnosis and the other emerges from a constructivist developmental perspective that promotes exploration and social interaction but tends to reject the methods and goals of the student modelers While the notion of opposing camps tends to create an artificial rift between groups of researchers it represents a conceptual distinction that is inherently more interesting and informative than the relatively meaningless divide often drawn between intelligent and unintelligent instructional systems An evident trend is that researchers in both camps view their computer learning environments as cognitive tools that can enhance learning performance and understanding Cognitive tools are objects provided by the instructional environment that allow students to incorporate new auxiliary methods or symbols into their social problem solving which otherwise would be unavailable A final section of the book represents researchers who are assimilating and accommodating the wisdom and creativity of their neighbors from both camps perhaps forming the look of technology for the future When the idea of model tracing in a computer based environment is combined with appreciation for creative mind extension cognitive tools and for how a community of learners can facilitate learning a camp is created where AI technologists and social constructivist learning theorists can feel equally at home *Authoring Tools for Advanced Technology Learning Environments* T. Murray, S. Blessing, S. Ainsworth, 2013-04-18 This edited book gives a comprehensive picture of the state of the art in authoring systems and authoring tools for advanced technology instructional systems It includes descriptions of fifteen systems and research projects from almost every significant effort in the field The book will appeal to researchers teachers and advanced students working in education instructional technology and computer based education psychology cognitive science and computer science Building Intelligent Interactive Tutors Beverly Park Woolf, 2010-07-28 Building Intelligent Interactive Tutors discusses educational systems that assess a student's knowledge and are adaptive to a student's learning needs The impact of computers has not been generally felt in education due to lack of hardware teacher training and sophisticated software and because current instructional software is neither truly responsive to student needs nor flexible enough to emulate teaching Dr Woolf taps into 20 years of research on intelligent tutors to bring designers and developers a broad range of issues and methods that produce the best intelligent learning environments possible whether for classroom or life long learning The book describes multidisciplinary approaches to using computers for teaching reports on research development and real world experiences and discusses intelligent tutors web based learning systems adaptive learning systems intelligent agents and intelligent multimedia It is recommended for professionals graduate students and others in computer science and

educational technology who are developing online tutoring systems to support e learning and who want to build intelligence into the system Combines both theory and practice to offer most in depth and up to date treatment of intelligent tutoring systems available Presents powerful drivers of virtual teaching systems including cognitive science artificial intelligence and the Internet Features algorithmic material that enables programmers and researchers to design building components and intelligent systems

Learning to Solve Problems David H. Jonassen, 2010-09-13 This book provides a comprehensive up to date look at problem solving research and practice over the last fifteen years The first chapter describes differences in types of problems individual differences among problem solvers as well as the domain and context within which a problem is being solved Part one describes six kinds of problems and the methods required to solve them Part two goes beyond traditional discussions of case design and introduces six different purposes or functions of cases the building blocks of problem solving learning environments It also describes methods for constructing cases to support problem solving Part three introduces a number of cognitive skills required for studying cases and solving problems Finally Part four describes several methods for assessing problem solving Key features includes Teaching Focus The book is not merely a review of research It also provides specific research based advice on how to design problem solving learning environments Illustrative Cases A rich array of cases illustrates how to build problem solving learning environments Part two introduces six different functions of cases and also describes the parameters of a case Chapter Integration Key theories and concepts are addressed across chapters and links to other chapters are made explicit The idea is to show how different kinds of problems cases skills and assessments are integrated Author expertise A prolific researcher and writer the author has been researching and publishing books and articles on learning to solve problems for the past fifteen years This book is appropriate for advanced courses in instructional design and technology science education applied cognitive psychology thinking and reasoning and educational psychology Instructional designers especially those involved in designing problem based learning as well as curriculum designers who seek new ways of structuring curriculum will find it an invaluable reference tool

Facilitating the Development and Use of Interactive Learning Environments Charles P. Bloom, R. Bowen Loftin, 2020-08-27 Intelligent tutoring technology is on the verge of a breakthrough into the mainstream of training and education Over the past 25 years researchers have learned not only what it takes to develop an effective intelligent tutoring system ITS but also what it takes to deploy and use one the true barometer of a technology's success This volume brings together a cross section of ITS researchers from academia industry and the government to talk about their experiences in ITS development and technology transfer both successful and unsuccessful Section 1 is devoted to detailed descriptions of tools and methods ITS developers can employ during development to facilitate technology adoption It includes discussions of the paradigmatic change in learning and instructional design that ITS fosters techniques for gathering design information for ITS domains where empirical or knowledge based methods are inappropriate and the conduct of cost benefits analyses to facilitate ITS funding

decisions Sections 2 and 3 offer numerous case studies of ITS deployment from both industry and the government All of these case studies regardless of outcome provide valuable insights into the dos and don'ts of ITS technology transfer This volume will be an invaluable resource for all researchers and developers of ITS as well as for managers and personnel in education and training organizations who must adopt and use ITS technology and information systems and computing support organization professionals who must support it if it is to succeed
