Java In Distributed Systems Concurrency Distribution And Persistence:

Java in Distributed Systems Marko Boger, 2001-05-25 Large and complex software systems such as Internet applications depend on distributed applications Although Java has helped reduce the complexity of distributed systems developers still have to contend with diverse hardware platforms remote communication over networks and system failures Java in Distributed Systems provides a comprehensive guide for anyone wishing to deepen their knowledge of Java in distributed applications Beginning with a tutorial guide to distributed programming in the Java environment it shows you how building blocks from threads to Jini can help you to fulfil Sun's vision that the Network is the Computer It then goes on to focus on aspects that are still challenging researchers such as concurrency distribution and persistence Key Features One of the few books to focus specifically on Java for building distributed applications Coverage includes threads sockets RMI CORBA Voyager Mobile agents JDBC object oriented databases Java spaces and Jini Includes advanced chapters on the cutting edge of Java language development including the author's own proposed Dejay Distributed Java an open source project that offers a unified approach to concurrency distribution and persistence *Distributed, Embedded and Real-time Java Systems* M. Teresa Higuera-Toledano, Andy J. Wellings, 2012-02-07 Research on real time Java technology has been prolific over the past decade leading to a large number of corresponding hardware and software solutions and frameworks for distributed and embedded real time Java systems This book is aimed primarily at researchers in real time embedded systems particularly those who wish to understand the current state of the art in using Java in this domain Much of the work in real time distributed embedded and real time Java has focused on the Real time Specification for Java RTSJ as the underlying base technology and consequently many of the Chapters in this book address issues with or solve problems using this framework Describes innovative techniques in scheduling memory management quality of service and communication systems supporting real time Java applications Includes coverage of multiprocessor embedded systems and parallel programming Discusses state of the art resource management for embedded systems including Java's real time garbage collection and parallel collectors Considers hardware support for the execution of Java programs including how programs can interact with functional accelerators Includes coverage of Safety Critical Java for development of safety critical embedded systems *Modeling and Processing for Next-Generation Big-Data Technologies* Fatos Xhafa, Leonard Barolli, Admir Barolli, Petraq Papajorgji, 2014-11-04 This book covers the latest advances in Big Data technologies and provides the readers with a comprehensive review of the state of the art in Big Data processing analysis analytics and other related topics It presents new models algorithms software solutions and methodologies covering the full data cycle from data gathering to their visualization and interaction and includes a set of case studies and best practices New research issues challenges and opportunities shaping the future agenda in the field of Big Data are also identified and presented throughout the book which is intended for researchers scholars advanced students software developers and practitioners working at the forefront in

their field **Scientific Engineering for Distributed Java Applications** Nicolas Guelfi, Egidio Astesiano, Gianna Reggio, 2003-07-01 FIDJI 2002 was an international forum for researchers and practitioners interested in the advances in and applications of software engineering for distributed application development. Concerning the technologies the workshop focused on Java related technologies. It was an opportunity to present and observe the latest research results and ideas in these areas. All papers submitted to this workshop were reviewed by at least two members of the International Program Committee. Acceptance was based primarily on the originality and contribution. We selected for these postworkshop proceedings 16 papers amongst 33 submitted, two tutorials and two keynotes. FIDJI 2002 was aimed at promoting a scientific approach to software engineering. The scope of the workshop included the following topics: design of distributed Java applications, Java related technologies, software and system architecture, engineering and development methodologies, development methodologies for UML, development methodologies for reliable distributed systems, component based development methodologies, management of evolutions, iterations in the analysis, design, implementation and test phases, dependability support during system lifecycle, managing inconsistencies during application development, atomicity and exception handling in system development, software architectures, frameworks and design patterns for developing distributed systems, integration of formal techniques in the development process, formal analysis and grounding of modeling notation and techniques. e.g. *Approximation Theory* Ole Christensen, Khadija Laghrida Christensen, 2004-03-18 This concisely written book gives an elementary introduction to a classical area of mathematics: approximation theory in a way that naturally leads to the modern field of wavelets. The exposition is driven by ideas rather than technical details and proofs demonstrate the dynamic nature of mathematics and the influence of classical disciplines on many areas of modern mathematics and applications. Key features and topics: Description of wavelets in words rather than mathematical symbols. Elementary introduction to approximation using polynomials, Weierstrass and Taylor's theorems. Introduction to infinite series with emphasis on approximation theoretic aspects. Introduction to Fourier analysis. Numerous classical illustrative examples and constructions. Discussion of the role of wavelets in digital signal processing and data compression such as the FBI's use of wavelets to store fingerprints. Minimal prerequisites: elementary calculus. Exercises that may be used in undergraduate and graduate courses on infinite series and Fourier series. *Approximation Theory: From Taylor Polynomials to Wavelets* will be an excellent textbook or self study reference for students and instructors in pure and applied mathematics, mathematical physics and engineering. Readers will find motivation and background material pointing toward advanced literature and research topics in pure and applied harmonic analysis and related areas. *Holonic Control for Large Scale Automated Logistic Systems* Cornelis Versteeg, 2004 *Advances in Distributed Systems* Sacha Krakowiak, Santosh Shrivastava, 2003-06-26 In 1992 we initiated a research project on large scale distributed computing systems LSDCS. It was a collaborative project involving research institutes and universities in Bologna, Grenoble, Lausanne, Lisbon, Rennes, Rocquencourt, Newcastle and

Twente The World Wide Web had recently been developed at CERN but its use was not yet as common place as it is today and graphical browsers had yet to be developed It was clear to us and to just about everyone else that LSDCS comprising several thousands to millions of individual computer systems nodes would be coming into existence as a consequence both of technological advances and the demands placed by applications We were excited about the problems of building large distributed systems and felt that serious rethinking of many of the existing computational paradigms algorithms and structuring principles for distributed computing was called for In our research proposal we summarized the problem domain as follows We expect LSDCS to exhibit great diversity of node and communications capability Nodes will range from mobile laptop computers workstations to supercomputers Whereas mobile computers may well have unreliable low bandwidth communications to the rest of the system other parts of the system may well possess high bandwidth communications capability To appreciate the problems posed by the sheer scale of a system comprising thousands of nodes we observe that such systems will be rarely functioning in their entirety

Objects and Databases Klaus R. Dittrich, Giovanna Guerrini, Isabella Merlo, Marta Oliva, M. Elena Rodriguez, 2003-06-29 These post proceedings contain the revised versions of the papers presented at the Symposium on Objects and Databases which was held in Sophia Antipolis France June 13 2000 in conjunction with the Fourteenth European Conference on Object Oriented Programming ECOOP 2000 This event continued the tradition established the year before in Lisbon Portugal with the First Workshop on Object Oriented Databases The goal of the symposium was to bring together researchers working in various corners of the field of objects and databases to discuss the current state of research in the field and to critically evaluate existing solutions in terms of their current usage their successes and limitations and their potential for new applications The organizing committee received 21 papers which were reviewed by a program committee of people active in the field of objects and databases There were 3 reviews for each paper and finally the organizing committee selected 9 long papers 2 short papers and a demonstration to be presented and discussed at the symposium The selected papers cover a wide spectrum of topics including data modeling concepts persistent object languages consistency and integrity of persistent data storage structures class versioning and schema evolution query languages and temporal object oriented databases In addition to the regular papers the symposium included an invited presentation given by Prof Malcolm Atkinson from the University of Glasgow Scotland where he heads the Persistence and Distribution Group
