Java Message Service David A Chappell, Richard Monson-Haefel, 2000-12-04 This book is a thorough introduction to Java Message Service JMS the standard Java application program interface API from Sun Microsystems that supports the formal communication known as messaging between computers in a network JMS provides a common interface to standard messaging protocols and to special messaging services in support of Java programs The messages exchange crucial data between computers rather than between users information such as event notification and service requests Messaging is often used to coordinate programs in dissimilar systems or written in different programming languages Using the JMS interface a programmer can invoke the messaging services of IBM s MQSeries Progress Software s SonicMQ and other popular messaging product vendors In addition JMS supports messages that contain serialized Java objects and messages that contain Extensible Markup Language XML pages Messaging is a powerful new paradigm that makes it easier to uncouple different parts of an enterprise application Messaging clients work by sending messages to a message server which is responsible for delivering the messages to their destination Message delivery is asynchronous meaning that the client can continue working without waiting for the message to be delivered The contents of the message can be anything from a simple text string to a serialized Java object or an XML document Java Message Service shows how to build applications using the point to point and publish and subscribe models how to use features like transactions and durable subscriptions to make an application reliable and how to use messaging within Enterprise JavaBeans It also introduces a new EJB type the MessageDrivenBean that is part of EJB 2.0 and discusses integration of messaging into J2EE [Java Message Service API Tutorial and Reference](#) Mark Hapner, 2002 Java Message Service JMS represents a powerful solution for communicating between Java enterprise applications software components and legacy systems In this authoritative tutorial and comprehensive reference Sun s Java Message Service architects offer start to finish coverage of peer to peer JMS development with Java 2 Platform Enterprise Edition Release 1.3 JMS is now fully integrated into the J2EE platform and this is the first book to show how to make the most of JMS in the context of sophisticated J2EE application development The authors begin by introducing the JMS API to developers who are new to it Then with the help of extensive programming examples they demonstrate key JMS techniques for enabling applications to create send receive and read messages and for integrating with existing back office and enterprise systems Coverage includes consuming messages asynchronously with message driven beans producing messages from application clients accessing entity beans from message driven bean producing messages from session beans and much more For all Java developers building applications that must communicate and share information *Java Message Service (JMS) for J2EE* Levent Erdogan, Levent Erdogan, 2002 This book will cover not only the concepts but also present simple examples to explain the concepts and real sample applications to show how to use those concepts and techniques [Java Message Service](#) Mark Richards, Richard Monson-Haefel, David A
