capitalize on the technology's latest rise in popularity. This fifth edition, written by Bill Burke and Richard Monson Haefel, has been updated to capture the very latest need to know Java technologies in the same award-winning fashion that drove the success of the previous four strong-selling editions. Bill Burke, Chief Architect at JBoss Inc, represents the company on the EJB 3.0 and Java EE 5 specification committees. Richard Monson Haefel is one of the world's leading experts on Enterprise Java. Enterprise JavaBeans 3.0 5th Edition is organized into two parts: the technical manuscript followed by the JBoss workbook. The technical manuscript explains what EJB is, how it works, and when to use it. The JBoss workbook provides step-by-step instructions for installing, configuring, and running the examples from the manuscript on the JBoss 4.0 Application Server. Although EJB makes application development much simpler, it's still a complex and ambitious technology that requires a great deal of time to study and master. But now, thanks to Enterprise JavaBeans 3.0 5th Edition, you can overcome the complexities of EJBs and learn from hundreds of practical examples that are large enough to test key concepts but small enough to be taken apart and explained in the detail that you need. Now you can harness the complexity of EJB with just a single resource by your side.

Enterprise JavaBeans Richard Monson-Haefel, 2001. This third edition explains the underlying technology, Java classes and interfaces, component model, and runtime behavior of Enterprise JavaBeans. In addition, the book contains an architecture overview, information on resource management, and primary services design strategies and XML deployment descriptors.

Java Web Services Unleashed Robert J. Brunner, 2002. This text provides Java developers with in-depth coverage of Web Services technology. It includes contributions from recognized Web Services experts and architects, including the Web Services team at IBM.

Helps identify scenarios and applications where Web services can provide the best ROI for your company. Foreword by Brown and Hagel, bestselling Web services authors of *Out of the Box*.

Mastering Web Services Security Bret Hartman, Donald J. Flinn, Konstantin Beznosov, Shirley Kawamoto, 2003-02-17. Application of Web Service Technologies on a B2B Communication Platform by Means of a Pattern and UML Based Software Development Process Arnd Schnieders, 2003-09-29. Inhaltsangabe. Abstract: There are about 230,000 establishments in the Spanish hotel, restaurant, and catering industry, accounting for a turnover of about 15.6 thousand million euros. All of them sell food to private consumers. On the other hand, suppliers and traders supply the catering trade with food and beverage products.

Usually the different players in this food distribution network trade products by means of orders which are placed manually. This is a process which can be enhanced through the application of computer and Internet technology. A project lately also supported by the Spanish government is supposed to fill this gap. This project is called Catanet and has been established three years ago. Actually the Catanet platform is used by more than 100 customers amongst them very important industry players like Lauren Films, Pepsi, Unilever and Nestle. Some of them will carry out a significant part of their overall food orders by the Catanet platform which corresponds to a turnover volume of many million euros. In the former version of the Catanet platform clients had to apply a web page based interface in order to use the Catanet services. As this approach prohibited the full exploitation of the benefits the use of computer assistance provides e.g. human participation still constitutes an inevitable and crucial part of the transaction the interaction is completely asynchronous an additional level is being added to the Catanet platform eliminating these shortcomings. During the time of this work the number of Catanet customers has grown explosively increasing also the diversity of the customer's computer systems. Additionally new subprojects could be launched due to the acquisition of a government grant. These encompassed among others new value added services demanded by the customers like an instant messaging module and a module for the automatic update of the local product catalogue. The characteristics of the IT infrastructure of the new customers which will carry out transactions with a serious turnover via the Catanet platform and the necessity to integrate the new subprojects required an adaptation of the design of the platform prototype which had been developed by this time and which is described in this work. Within this context the decision has been done to use .NET Framework based programs on the customer side instead of Java which had been used so far. The reasons for this were besides the easier integration with the IT *J2EE and JAX* Michael Yawn, Mike Yawn, 2002 CD ROM contains Source code Tools for developing and deploying Web services *Mastering BEA WebLogic Server* Gregory Nyberg, Robert Patrick, Paul Bauerschmidt, Jeff McDaniel, Raja Mukherjee, 2004-03-15 Designed to show experienced developers how to become power developers with BEA WebLogic Covers BEA WebLogic Server version 8.1 and earlier versions A perfect companion to the bestselling book Mastering Enterprise JavaBeans Second Edition 0471 41711 4 Companion Web site includes technology updates and links to related sites
