Estimating Projecting Input Output Coe:

Nonparametric Estimation of Educational Production and Costs using Data Envelopment Analysis Vincent

Blackburn,Shae Brennan,John Ruggiero,2014-06-07 This book provides a complete analysis of educational production and costs using the nonparametric technique known as Data Envelopment Analysis DEA The book focuses on estimation of technical allocative and scale efficiency in the public sector characterized by the influence of exogenous socio economic variables State of the art DEA models will be presented and fully discussed Specific education topics important to policy makers including adequacy technical allocative and scale efficiency productivity and environmental costs will be analyzed To illustrate how these techniques can be applied to school systems worldwide the authors use data on Australian elementary and high schools to develop nonparametric measures that will help inform current policy debate in Australia The purpose of the book is to provide a comprehensive analysis of educational production using numerous public sector DEA models We provide a review of DEA with SAS programming code to estimate technical scale and allocative efficiency in chapter 2 In chapter 3 we extend the DEA models to control for exogenous factors of production SAS code is also provided to estimate all public sector models We use simulated data to illustrate the results Chapters 4 6 provide a complete analysis of the primary and secondary schools We analyze input and output oriented models and derive measures of technical allocative and scale efficiency We also provide estimates of environmental costs that arise from schools facing different operating environments based on socioeconomic conditions In addition we show how DEA can provide insight on adequacy the minimum cost of providing a pre defined adequate education The models presented are consistent with public sector production in general and educational production in particular We also provide a complete analysis of educational productivity for both primary and secondary schools using state of the art public sector Malmquist measures The authors use current data on Australian schools to highlight important policy questions related to efficiency and productivity given concerns that schools are not allocatively scarce resources in an economic efficient way This research focus comes at an important watershed moment in the Australian Federal Governments current involvement in designing new nationally consistent funding models for both government and non government schooling sectors with effect from 2014 A new National School Resourcing Standard is proposed to be implemented signaling a move to resource adequacy school efficiency and value for money dimensions These standards are consistent with the measures presented and estimated in this book As a result the models implemented in this book can serve as the basis to evaluate the funding changes associated with the transition from a centralized to a new decentralized set of school funding arrangements

Software Sizing, Estimation, and Risk Management Daniel D. Galorath,Michael W. Evans,2006-03-15 To achieve consistent software project success under the pressures of today s software development environment software organizations require achievable plans including viable estimates of schedule resources and risks To estimate realistically you must understand how to apply sound estimation processes tools and data

Software Sizing **Health and Environmental Risk Assessment** P. F. Ricci, M. D. Rowe, 2013-10-22 Process and input output analysis have emerged as the two principal methods of analyzing health risks of energy technologies This book describes applications and differences between these two methods with discussions of sources of error and uncertainty data limitations and some solutions to common problems Its goals are to provide understanding of the strengths and weaknesses of the methods and to provide a basis for standardizing risk assessment for energy policy analysis Sections of the book describe risk analysis and develop issues common to both the process and input output methods describe data bases and their limitations discuss use of environmental models for generating environmental information not available in data bases describe applications of the methods in case studies and discuss the state of the art of the two models and opportunities for combining them to take advantage of their relative strengths and weaknesses **Fossil, solar, geothermal energy, and basic research** United States.
