concerns about the individual combat service member's ability to avoid performance degradation in conjunction with the need to maintain both mental and physical capabilities in highly stressful situations have led to an interest in developing methods by which commanders can monitor the status of the combat service members in the field. This report examines appropriate biological markers, monitoring technologies currently available and in need of development, and appropriate algorithms to interpret the data obtained in order to provide information for command decisions relative to the physiological readiness of each combat service member. More specifically, this report also provides responses to questions posed by the military relative to monitoring the metabolic regulation during prolonged exhaustive efforts where nutrition, hydration, and repair mechanisms may be mismatched to intakes and rest or where specific metabolic derangements are present. *Driver Distraction* Michael A. Regan, John D. Lee, Kristie Young, 2008-10-15. Certain activities and events both inside and outside a vehicle can distract drivers and lead to degraded performance. New technologies such as entertainment, communication, and driver assistance systems play a significant role in distraction. This unique volume defines driver distraction, discusses various causes, and explains how to measure acceptable and unacceptable levels of distraction. Several chapters address measurement techniques based on performance and epidemiological studies. Most importantly, the text explores ways to mitigate driver distraction as well as countermeasures including vehicle design and effective legislation. *New Zealand Journal of Psychology*, 2007.
