Applied Intelligent Systems John Fulcher, 2012-10-16 Humans have always been hopeless at predicting the future most people now generally agree that the margin of viability in prophecy appears to be 1 ten years Even sophisticated research endeavours in this arena tend to go 2 off the rails after a decade or so The computer industry has been particularly prone to bold and often way off the mark predictions for example I think there is a world market for maybe five computers Thomas J Watson IBM Chairman 1943 I have traveled the length and breadth of this country and talked with the best people and I can assure you that data processing is a fad that won't last out the year Prentice Hall Editor 1957 There is no reason why anyone would want a computer in their home Ken Olsen founder of DEC 1977 and 640K ought to be enough for anybody Bill Gates CEO Microsoft 1981 3 The field of Artificial Intelligence right from its inception has been particularly plagued by bold prediction syndrome and often by leading practitioners who should know better AI has received a lot of bad press 4 over the decades and a lot of it deservedly so How often have we groaned in despair at the latest by the year 20xx we will all have insert your own particular hobby horse here e g *Korea and the Knowledge-based Economy* Carl J. Innovations in Big Data Mining and Embedded Knowledge Anna Esposito, Antonietta M. Esposito, Lakhmi C. Jain, 2019-07-03 This book addresses the usefulness of knowledge discovery through data mining With this aim contributors from different fields propose concrete problems and applications showing how data mining and discovering embedded knowledge from raw data can be beneficial to social organizations domestic spheres and ICT markets Data mining or knowledge discovery in databases KDD has received increasing interest due to its focus on transforming large amounts of data into novel valid useful and structured knowledge by detecting concealed patterns and relationships The concept of knowledge is broad and speculative and has promoted epistemological debates in western philosophies The intensified interest in knowledge management and data mining stems from the difficulty in identifying computational models able to approximate human behaviors and abilities in resolving organizational social and physical problems Current ICT interfaces are not yet adequately advanced to support and simulate the abilities of physicians teachers assistants or housekeepers in domestic spheres And unlike in industrial contexts where abilities are routinely applied the domestic world is continuously changing and unpredictable There are challenging questions in this field Can
