**Commercial Design Using Revit Architecture 2012** Daniel John Stine,2011-05-18 Commercial Design Using Revit Architecture 2012 is designed for the architectural student using Revit Architecture 2012 The intent is to provide the student with a well rounded knowledge of tools and techniques for use in both school and industry This text takes a project based approach to learning Revit Architecture in which the student develops a three story office building Each book comes with a DVD containing numerous video presentations of the written material General building codes and industry standard conventions are covered in a way that is applicable to the current exercise The

first two chapters are intended to get the reader familiar with the user interface and many of the common menus and tools of Revit Architecture 2012. A small office is created in chapter two to show just how easy it is to get started using Revit Architecture. By the end of chapter two the student will be excited and prepared to take on a much larger project. Throughout the rest of the book the student develops a three story office building. The drawings start with the floor plans and develop all the way to photo realistic renderings like the one on the cover of this book. In these chapters the many tools and features of Revit Architecture 2012 are covered in greater detail.

**Heritage Building Information Modelling for Implementing UNESCO Procedures** Ahmad Hamed Baik, 2020-06-15. The main aim of this book is to develop and explore the value of new innovative digital content to help satisfy UNESCO's World Heritage nomination file requirements. Through a detailed exploration of two BIM case studies from Jeddah, Saudi Arabia, the book uniquely connects the use of Heritage BIM to the documentation methods used by UNESCO and demonstrates how this provides a contribution to both countries with heritage sites and UNESCO as an organisation. The research and practical examples in the book seek to address both the lack of a comprehensive method of submitting a nomination file to UNESCO and the lack of authentic engineering information in countries where extensive heritage sites exist. It looks at answering the following questions: How can Heritage Building Information Modelling (HBIM) be used to better maintain, protect and record the updated information of historical buildings? How can HBIM provide innovation in creating the missing information for the assignment of UNESCO's World Heritage status? What additional value can a sustainable update of HBIM data provide for such sites? How can HBIM improve the cultural value of heritage buildings in the short, medium and long term as well as provide a better future for historical buildings? This book will be useful reading for researchers and practitioners in the areas of heritage conservation, archaeology, World Heritage nomination, HBIM, digital technology and engineering, remote sensing, laser scanning and architectural technology.
