

# Fortran History

- Before Fortran, programs were written in assembly language (very tedious to say the least)
  - low-level commands such as “load x from memory into register 7” or “add values in registers 10 and 11 and write result to register 4”
- Fortran was the first widely-used high-level computer language
  - 1957
  - Developed by IBM for scientific applications
  - Program written on a specially formatted green sheet, then entered as punched cards

**Current Trends in High Performance Computing and Its Applications** Wu Zhang, Zhangxin

Chen, Roland Glowinski, Weiqin Tong, 2005-12-12. A large international conference on High Performance Computing and its

applications was held in Shanghai, China, August 8-10, 2004. It served as a forum to present current work by researchers and

software developers from around the world as well as to highlight activities in the high performance computing area. It aimed

to bring together research scientists, application engineers, and software developers to discuss problems and solutions and to identify

new issues in this area. The conference focused on the design and analysis of high performance computing algorithms, tools,

and platforms and their scientific engineering, medical, and industrial applications. It drew about 150 participants from Canada,

China, Germany, India, Iran, Japan, Mexico, Singapore, South Korea, the United Kingdom, and the United States of America. More

than 170 papers were received on a variety of subjects in modern high performance computing and its applications, such as

numerical and software algorithm design and analysis, grid computing, advanced adaptive and parallel algorithm development,

distributing debugging tools, computational grid and network environment design, computer simulation, and visualization, and

computational language study and their applications to science engineering and medicine This book contains ninety papers that are representative in these subjects It serves as an excellent research reference for graduate students scientists and engineers who work with high performance computing for problems arising in science engineering and medicine This conference would not have been possible without the support of a number of organizations and agencies and the assistance of many people

**Tools for High Performance Computing 2018 / 2019** Hartmut Mix, Christoph Niethammer, Huan Zhou, Wolfgang E. Nagel, Michael M. Resch, 2021-05-22 This book presents the proceedings of the 12th International Parallel Tools Workshop held in Stuttgart Germany during September 17 18 2018 and of the 13th International Parallel Tools Workshop held in Dresden Germany during September 2 3 2019 The workshops are a forum to discuss the latest advances in parallel tools for high performance computing High performance computing plays an increasingly important role for numerical simulation and modeling in academic and industrial research At the same time using large scale parallel systems efficiently is becoming more difficult A number of tools addressing parallel program development and analysis has emerged from the high performance computing community over the last decade and what may have started as a collection of a small helper scripts has now matured into production grade frameworks Powerful user interfaces and an extensive body of documentation together create a user friendly environment for parallel tools

*Computational Science and Its Applications - ICCSA 2004* Antonio Laganà, Marina L. Gavrilova, Vipin Kumar, Youngsong Mun, C.J. Kenneth Tan, Osvaldo Gervasi, 2004-05-07 The natural mission of Computational Science is to tackle all sorts of human problems and to work out intelligent automata aimed at alleviating the burden of working out suitable tools for solving complex problems For this reason Computational Science though originating from the need to solve the most challenging problems in science and engineering computational science is the key player in the fight to gain fundamental advances in astronomy biology chemistry environmental science physics and several other scientific and engineering disciplines is increasingly turning its attention to all fields of human activity In all activities in fact intensive computation information handling knowledge synthesis the use of ad hoc devices etc increasingly need to be exploited and coordinated regardless of the location of both the users and the various and heterogeneous computing platforms As a result the key to understanding the explosive growth of this discipline lies in two adjectives that more and more appropriately refer to Computational Science and its applications interoperable and ubiquitous Numerous examples of ubiquitous and interoperable tools and applications are given in the present four LNCS volumes containing the contributions delivered at the 2004 International Conference on Computational Science and its Applications ICCSA 2004 held in Assisi Italy May 14 17 2004
