Into The Vortex:

The Vortex State N. Bontemps, Yvan Bruynseraede, Guy Deutscher, Aharon Kapitulnik, 2012-12-06 One of the most spectacular consequences of the description of the superfluid condensate in superfluid He or in superconductors as a single macroscopic quantum state is the quantization of circulation resulting in quantized vortex lines This book draws no distinction between superfluid He³ and He⁴ and superconductors The reader will find the essential introductory chapters and the most recent theoretical and experimental progress in our understanding of the vortex state in both superconductors and superfluids from lectures given by leading experts in the field both experimentalists and theoreticians who gathered in Carg se for a NATO ASI The peculiar features related to short coherence lengths 2D geometry high temperatures disorder and pinning are thoroughly discussed

Coupling Processes in the Lower and Middle Atmosphere E.V. Thrane, Tom A. Blix, David C. Fritts, 2012-12-06 The NATO Advanced Research Workshop on Coupling Processes in the Lower and Middle atmosphere held in Loen Norway in May 1992 was in the estimation of apparently all participants an enormous success The 18 invited speakers included many of the leaders in the field and resulted in the attendance of a large number of contributing speakers and observers The subject of the workshop was itself very timely given the increasing awareness within the international community of the sensitivity of the atmosphere to coupling between adjacent layers different latitudes and various scales of motion It was also very beneficial to bring together researchers with different approaches to the same or similar problems For example experimentalists benefitted from the inputs of modelers and theoreticians concerning the needs of current models and the most pressing problems and unknowns Likewise theoreticians were challenged to apply themselves to realistic problems and saw their theories tested against geophysical data These discussions led to meaningful exchanges of ideas and challenges to or displacement of conventional wisdom in some areas Indeed possibly the greatest benefit of the workshop was the exposure of many participants to other areas of research or approaches to problems relevant to their own work Workshop topics were confined to dynamical coupling processes in order to examine progress in a relatively focussed area Nevertheless the results presented spanned spatial scales from molecular to global and temporal scales from seconds to decades

Processes in GeoMedia—Volume IV Tatiana Chaplina, 2021-11-15 This book corresponds to the fourth volume of the series focused on Processes in GeoMedia and their research on the dynamic of natural systems geosphere hydrosphere atmosphere and their interactions the human contribution to naturally occurring processes are

among the most urgent and essential scientific problems The widespread introduction of computer technology has allowed calculating complex phenomena previously unavailable for analysis The creation and improvement of a new generation of geophysical instruments remote observing systems based on the ship aircraft and satellite allow obtaining a large amount of data to reflect the broad picture of the processes objectively The articles included in this book also reflect a critical position in laboratory modeling of research in geo environments and testing

Low-Dimensional Systems: Theory, Preparation, and Some Applications Luis M. Liz-Marzán, Michael Giersig, 2012-12-06 This volume contains papers presented at the NATO Advanced Research Workshop ARW Dynamic Interactions in Quantum Dot Systems held at Hotel Atrium in Puszczykowo near Poznan Poland May 16 19 2002 The term low dimensional systems which is used in the title of this volume refers to those systems which contain at least one dimension that is intermediate between those characteristic of atoms molecules and those of the bulk material Depending on how many dimensions lay within this range we generally speak of quantum wells quantum wires and quantum dots As such an intermediate state some properties of low dimensional systems are very different to those of their molecular and bulk counterparts These properties generally include optical electronic and magnetic properties and all these are partially covered in this book The main goal of the workshop was to discuss the actual state of the art in the broad area of nanotechnology The initial focus was on the innovative synthesis of nanomaterials and their properties such as quantum size effects superparamagnetism or field emission These topics lead us into the various field based interactions including plasmon magnetic spin and exciton coupling The newer more sophisticated methods for characterization of nanomaterials were discussed as well as the methods for possible industrial applications In general chemists and physicists as well as experts on both theory and experiments on nanosized regime structures were brought together to discuss the general phenomena underlying their fields of interest from different points of view

Progress in Low Temperature Physics, 2005-11-03 A number of interrelated areas of low temperature physics are brought together in this volume The four topics are presented as separate chapters First is the study of the Kibble Zurek mechanism for defect formation following quench cooling of superfluid ^3He and its relation to quantum field theory Properties of heavy fermion materials are described next with special attention to the competition between magnetism and superconductivity Some of the newest correlated electron systems are discussed and the arguments for possible unconventional nature of the superconducting order parameter are presented for these systems including the novel coexistence of ferromagnetism and superconductivity Highly polarized degenerate Fermi liquids are of substantial interest in many areas of physics The most complete description of observations of thermodynamic and transport phenomena are reviewed here for the case of polarized liquid ^3He obtained by rapid melting from a polarized solid and subsequent rapid refrigeration Properties of the melting curve of ^3He and the related technique of melting curve thermometry are described in detail Superfluid ^3He and Quantum Field Theory Large Scale structure of the Universe Unconventional Superconductivity Heavy Fermions Quantum Phase

Vortices in Unconventional Superconductors and Superfluids Rudolf Huebener, 2002-01-22 Topological defects are generic in continuous media In the relativistic quantum vacuum they are known as cosmic strings in superconductors as quantized flux lines and in superfluids low density atomic Bose Einstein condensates and neutron stars as quantized vortex lines This collection of articles by leading scientists presents a modern treatment of the physics of vortex matter mainly applied to unconventional superconductors and superfluids but with extensions to other areas of physics **Modern trends in Superconductivity and Superfluidity** M. Yu. Kagan, 2013-12-11 This book concisely presents the latest trends in the physics of superconductivity and superfluidity and magnetism in novel systems as well as the problem of BCS BEC crossover in ultracold quantum gases and high T_c superconductors It further illuminates the intensive exchange of ideas between these closely related fields of condensed matter physics over the last 30 years of their dynamic development The content is based on the author s original findings obtained at the Kapitza Institute as well as advanced lecture courses he held at the Moscow Engineering Physical Institute Amsterdam University Loughborough University and LPTMS Orsay between 1994 and 2011 In addition to the findings of his group the author discusses the most recent concepts in these fields obtained both in Russia and in the West The book consists of 16 chapters which are divided into four parts The first part describes recent developments in superfluid hydrodynamics of quantum fluids and solids including the fashionable subject of possible supersolidity in quantum crystals of ^4He while the second describes BCS BEC crossover in quantum Fermi Bose gases and mixtures as well as in the underdoped states of cuprates The third part is devoted to non phonon mechanisms of superconductivity in unconventional anomalous superconductors including some important aspects of the theory of high T_c superconductivity The last part considers the anomalous normal state of novel superconductive materials and materials with colossal magnetoresistance CMR The book offers a valuable guide for senior level undergraduate students and graduate students
