Computer based techniques can lead a student to a clearer understanding of problem areas in a subject. The Letts Key Facts Revision Software series provides suites of programs specifically designed to devote weight into these areas of difficulty. Each package contains up to 10 interactive programs based on major topics found in all the current 16+ (O-Level, GCE, CSE and GCSE) syllabuses.

As an integral part of a revision scheme the programs will assist understanding and reinforce learning. A variety of approaches is used to maximise the student's interest and to introduce an element of enjoyment into topic study. Graphics are presented in an imaginative, interactive way as a positive teaching aid. An illustrated booklet provides information on how to get the most out of the programs.

Computer Studies

Ten interactive programs, approved by subject teachers and tested by students are contained on two cassette tapes. Topics included are:

- History of computers and information processing
- Computer systems
- Input and output devices, storage media
- Flowcharts
- High-level languages
- Low-level languages
- Operating systems and systems software
- Data organisation
- Bit representation of data
- Digital logic

Titles in the series

Attention Arthur F. Kramer, Douglas A. Wiegmann, Alex Kirlik, 2007 The study of attention in the laboratory has been crucial to understanding the mechanisms that support several different facets of attentional processing Our ability to both divide attention among multiple tasks and stimuli and selectively focus it on task relevant information while ignoring distracting task irrelevant information as well as how top down and bottom up factors influence the way that attention is directed within and across modalities Equally important however is research that has attempted to scale up to the real world this empirical work on attention that has traditionally been well controlled by limited laboratory paradigms and phenomena These types of basic and theoretically guided applied research on attention have benefited immeasurably from the work of Christopher Wickens This book honors Wickens many important contributions to the study of attention by bringing together researchers who examine real world attentional problems and questions in light of attentional theory The research fostered by Wickens contributions will enrich not only our understanding of human performance in complex real world systems but also reveal the gaps on our knowledge of basic attentional processes

Cumulated Index Medicus, 1989 Routledge Handbook of Art, Science, and Technology Studies Hannah Rogers, Megan Halpern, Dehlia Hannah, Kathryn de Ridder-Vignone, 2021-12-22 Art and science work is experiencing a dramatic rise coincident with burgeoning Science and Technology Studies STS interest in this area Science has played the role of muse for the arts inspiring imaginative reconfigurations of scientific themes and exploring their cultural resonance Conversely the arts are often deployed in the service of science communication illustration and popularization STS scholars have sought to resist the instrumentalization of the arts by the sciences emphasizing studies of theories and practices across disciplines and the distinctive and complementary contributions of each The manifestation of this commonality of creative and epistemic practices is the emergence of Art Science and Technology Studies ASTS as the interdisciplinary exploration of art science This handbook defines the modes practices crucial literature and research interests of this emerging field It explores the questions methodologies and theoretical implications of scholarship and practice that arise at the intersection of art and STS Further ASTS demonstrates how the arts are intervening in STS Drawing on methods and concepts derived from STS and allied fields including visual studies performance studies design studies science communication and aesthetics and the

knowledge of practicing artists and curators ASTS is predicated on the capacity to see both art and science as constructions of human knowledge making Accordingly it posits a new analytical vernacular enabling new ways of seeing understanding and thinking critically about the world This handbook provides scholars and practitioners already familiar with the themes and tensions of art science with a means of connecting across disciplines It proposes organizing principles for thinking about art science across the sciences social sciences humanities and arts Encounters with art and science become meaningful in relation to practices and materials manifest as perceptual habits background knowledge and cultural norms As the chapters in this handbook demonstrate a variety of STS tools can be brought to bear on art science so that systematic research can be conducted on this unique set of knowledge making practices
