## Introducing Science:

*Introducing Science through Images* Maria E. Gigante, 2018-06-01 An examination of how images can serve as communication tools to popularize science in the public eye As funding for basic scientific research becomes increasingly difficult to secure public support becomes essential Because of its promise for captivating nonexpert publics the practice of merging art and imagery with science has been gaining traction in the scientific community While images have been used with greater frequency in recent years their value is often viewed as largely superficial To the contrary Maria E Gigante posits in *Introducing Science through Images* the value of imagery goes far beyond mere aesthetics visual elements are powerful communication vehicles The images examined in this volume drawn from a wide range of historical periods serve an introductory function that is they appear in a position of primacy relative to text and like the introduction to a speech have the potential to make audiences attentive and receptive to the forthcoming content Gigante calls them portal images and explicates their utility in science communication both to popularize and mystify science in the public eye Gigante analyzes how science has been represented by various types of portal images frontispieces portraits of scientists popular science magazine covers and award winning scientific images from Internet visualization competitions Using theories of rhetoric and visual communication she addresses the weak connection between scientific communities and the public and explores how visual elements can best be employed to garner public support for research

*Science | Environment | Health* Albert Zeyer, Regula Kyburz-Graber, 2021-12-09 This book provides a fascinating insight into the on going process of self reflection in the Science Environment Health S E H community The basic vision of a new S E H pedagogy is to establish a transdisciplinary dialogue between the three educational fields of science education environmental education and health education This approach finds growing interest among science educators Since 2014 the ESERA special interest group S E H has united both experienced

and junior researchers all over Europe in a burgeoning research community This book presents a selection of results of these vibrant activities Systems theory has turned out to be a stimulating theoretical framework for S E H The limits of predictability in complex living systems result in structural uncertainty for decision making and they ask for emphasising and rethinking the role of pedagogical concepts like informed citizenship and scientific literacy They challenge crude scientific determinism in environmental and health education which all too often ends up with students eco and health depression Instead S E H conceives coping with uncertainty in terms of an interplay between cognitive and affective factors The horizon of the future remains always open Hope must never die in a new S E H pedagogy Chapter 3 is available open access under a Creative Commons Attribution 4 0 International License via [link.springer.com](https://link.springer.com)
