Atmospheric Flight in the Twentieth Century P. Galison,A. Roland,2013-03-07 All technologies differ from one another They are as varied as humanity s interaction with the physical world Even people attempting to do the same thing produce multiple technologies For example John H White discovered more than 1 1000 patents in the 19th century for locomotive smokestacks Yet all technologies are processes by which humans seek to control their physical environment and bend nature to their purposes All technologies are alike The tension between likeness and difference runs through this collection of papers All focus on atmospheric flight a twentieth century phenomenon But they approach the topic from different disciplinary perspectives They ask disparate questions And they work from distinct agendas Collectively they help to explain what is different about aviation how it differs from other technologies and how flight itself has varied from one time and place to another The importance of this topic is manifest Flight is one of the defining technologies of the twentieth century Jay David Bolter argues in Turing s Man that certain technologies in certain ages have had the power not only to transform society but also to shape the way in which people understand their relationship with the physical world A defining technology says Bolter resembles a magnifying glass which collects and focuses seemingly disparate ideas in a culture into

Flight Physics E. Torenbeek,H. Wittenberg,2009-07-06 Knowledge is not merely everything we have come to know but also ideas we have pondered long enough to know in which way they are related and 1 how these ideas can be put to practical use Modern aviation has been made possible as a result of much scientific search However the very first useful results of this research became available a considerable length of time after the aviation pioneers had made their first flights Apparently researchers were not able to find an adequate explanation for the occurrence of lift until the beginning of the 21st century Also for the fundamentals of stability and control there was no theory available that the pioneers could rely on Only after the first motorized flights had been successfully made did researchers become more interested in the science of aviation which from then on began to take shape In modern day life many millions of passengers are transported every year by air People in the western societies take to the skies on average several times a year Especially in areas surrounding busy airports travel by plane has been on the rise since the end of the Second World War Despite becoming familiar with the sight of a jumbo jet commencing its flight once or twice a day many find it astonishing that such a colossus with a mass of several hundred thousands of kilograms can actually lift off from the ground **On the Frontier** Richard P. Hallion,1984 On the Frontier Richard Hallion,1984 A Bibliography of British History, 1914-1989 Keith Robbins,American Historical Association,Royal Historical Society (Great Britain),1996 Containing over 25 000 entries this unique volume will be absolutely indispensable for all those with an interest in Britain in the twentieth century Accessibly arranged by theme with helpful introductions to each chapter a huge range of topics is covered There is a comprehensive index
