History of Computing: Software Issues Ulf Hashagen, Reinhard Keil-Slawik, Arthur L. Norberg, 2013-06-29 *Mapping the History of Computing-software*, 2000 ICHC 2000 Ulf Hashagen, Reinhard Keil-Slawik, Arthur Lawrence Norberg, William Aspray, Michael Sean Mahoney, Heinz Nixdorf MuseumsForum, Charles Babbage Institute, Heinz Nixdorf Institut, 2000 **Unimagined Futures - ICT Opportunities and Challenges** Leon Strous, Roger Johnson, David Alan Grier, Doron Swade, 2020-12-05 This Festschrift Unimagined Futures ICT Opportunities and Challenges is the first Festschrift in the IFIP AICT series It examines key challenges facing the ICT community today While addressing the contemporary challenges the book provides the opportunity to look back to help understand the contemporary scene and identify appropriate future responses to them Experts in different areas of the ICT scene have contributed to this IFIP 60th anniversary book which will be a key input to the ICT community worldwide on setting policy priorities and agendas for the coming decade In addition a number of contributions look specifically at the role of professionals and of national regional and global organizations in disseminating the benefits of ICT to humanity worldwide **Two Bits** Christopher M. Kelty, 2008-06-09 Ethnographic study of the programmers engineers and hackers who have shaped the internet since the 1970s and the battles that have been waged amongst them over the development of open source software *Software Process Improvement for Small and Medium Enterprises: Techniques and Case Studies* Oktaba, Hanna, Piattini, Mario, 2008-04-30 Software engineering is of major importance to all enterprises however the key areas of software quality and software process improvement standards and models are currently geared toward large organizations where most software organizations are small and medium enterprises Software Process Improvement for Small and Medium Enterprises Techniques and Case Studies offers practical and useful guidelines models and techniques for improving software processes and products for small and medium enterprises utilizing the authoritative demonstrative tools of case studies and lessons learned to provide academics scholars and practitioners with an invaluable research source **Programmed Visions** Wendy Hui Kyong Chun, 2013-01-11 A theoretical examination of the surprising emergence of software as a guiding metaphor for our neoliberal world New media thrives on cycles of obsolescence and renewal from celebrations of cyber everything to Y2K from the dot com bust to the next big things mobile mobs Web 3.0 cloud computing In Programmed Visions Wendy Hui Kyong Chun argues that these cycles result in part from the ways in which new media encapsulates a logic of programmability New media proliferates programmed visions which seek to shape and predict even embody a future based on past data These programmed visions have also made computers based on metaphor metaphors for metaphor itself for a general logic of substitutability Chun argues that the clarity offered by software as metaphor should make us pause because software also engenders a profound sense of ignorance who knows what lurks behind our smiling interfaces behind the objects we click and manipulate The combination of what can be seen and not seen known knowable and not known its

separation of interface from algorithm and software from hardware makes it a powerful metaphor for everything we believe is invisible yet generates visible logical effects from genetics to the invisible hand of the market from ideology to culture

Histories of Computing Michael Sean Mahoney, 2011-06-20 Computer technology is pervasive in the modern world its role ever more important as it becomes embedded in a myriad of physical systems and disciplinary ways of thinking The late Michael Sean Mahoney was a pioneer scholar of the history of computing one of the first established historians of science to take seriously the challenges and opportunities posed by information technology to our understanding of the twentieth century Mahoney s work ranged widely from logic and the theory of computation to the development of software and applications as craft work But it was always informed by a unique perspective derived from his distinguished work on the history of medieval mathematics and experimental practice during the Scientific Revolution His writings offered a new angle on very recent events and ideas and bridged the gaps between academic historians and computer scientists Indeed he came to believe that the field was irreducibly pluralistic and that there could be only histories of computing In this collection Thomas Haigh presents thirteen of Mahoney s essays and papers organized across three categories historiography software engineering and theoretical computer science His introduction surveys Mahoney s work to trace the development of key themes illuminate connections among different areas of his research and put his contributions into context The volume also includes an essay on Mahoney by his former students Jed Z Buchwald and D Graham Burnett The result is a landmark work of interest to computer professionals as well as historians of technology and science
