Everybody's Comet Alan Hale, 1996 Discovered in July 1995 by Alan Hale and Thomas Bopp Comet Hale Bopp was the brightest comet ever seen at its distance This gives the history of its discovery explains how to view it from fall 1996 to spring 1997 and explains the relationship of comets to the birth of our solar system and to asteroids meteors and eclipses of the sun and moon **Comet Hale-Bopp** Robert Burnham, 1997-01-28 How to find view and photograph the comet of the century [An Observer's Guide to Comet Hale-Bopp](#) Don Machholz, 1996 **The Comet Hale-Bopp Book** Thomas A. Hockey, 1996 A fascinating introduction to the recently discovered Comet Hale Bopp that will soon burst onto the celestial scene The comet will be one of the most studied and perhaps brightest It arrives on the heels of other recent comets in the year of the comet Hockey's book fills the long standing demand for a guidebook that helps everyone gripped by comet fever appreciate this spectacular event It is written in a lucid style for a non technical readership Biographical details and first person quotes from Alan Hale and Thomas Bopp among others humanize the science behind the comet and capture the feel of what could well be the astronomical event of the decade The book provides the reader with charts and tables to locate and observe the comet Hockey tells the story of the comet's discovery astronomer's reaction to it and their preparation for its arrival It also discusses other famous comets including Comet Halley Comet Shoemaker Levy 9 and Comet Hyakutake and their significance This is a well written account of everything you need to know to enjoy Comet Hale Bopp The level of writing is most appropriate for young teens but their parents will pick it up and learn a great deal as well I was particularly impressed with how well the author handles scientific concepts for this audience They are deftly woven into the text and should inspire young readers to see science as an exciting process not a collection of factoids Dr Catharine Garmany University of Colorado Boulder Chair Education Advisory Board American Astronomical Society It is refreshing to see this authoritative little book The book is especially suitable for younger readers observers and amateur astronomers The profuse photo illustrations include not only some of the better NASA and large telescope images of comets asteroids and craters but also shots of current science personalities including the discoverers Hale and Bopp All in all the book gives an easy introduction to why scientists and naturalists are excited about the approach of a new major comet Perhaps the most inspiring chapters for many readers will be the last two which detail how and where to watch for the comet the role of amateurs in comet studies and how to understand and use small telescopes I recommend it for younger readers and applaud the author for introducing a whole new generation of readers to their own personal comet and hence to the wonders of the universe around us Dr William K Hartmann Planetary Science Institute Tucson Author of *Astronomy the Cosmic Journey* and *Moons and Planets* co author of *The Modern Theory for the Origin of the Moon* Mariner 9 space probe imaging team co investigator Space Artist Hockey has the first time astronomical observer clearly in his sights young astronomers will enjoy Hockey John Hughes *Sky and Telescope* February 1997 This book correctly identifies itself as a fascinating introduction to

the recently discovered Comet Hale Bopp Author Thomas Hockey is a professional planetary scientist and a professor at a university Northern Iowa noted for its emphasis on quality astronomy education It is therefore not surprising that this book is clear and accurate Hockey has a distinctive conversational style which is neither pedantic nor slick his book reads like a story from cover to cover It is neither a textbook nor an encyclopedia on comets Prof John R Percy Astronomer University of Toronto Chair International Astronomical Union Commission The Teaching of Astronomy If you are interested in either finding Comet Hale Bopp or learning about the mysterious lore of comets then this is the book for you Hockey is a real story teller when he relates the discovery of Hale Bopp he shows how the roles played by both amateur and professional astronomy knit together Hockey writes in a casual easy to read style which makes concepts clear without resorting to math I especially recommend this book for teachers and their students Prof Mary Kay Hemenway Astronomer University of Texas at Austin Education Officer American Astronomical Society I find the book to be a rare gem in the popular science canon which by my personal standards covers a fascinating subject is of relevance to the scientific community and well written Bruce Gain Editor Earth Space Review The interested public will find this book both entertaining and informative Prof Thomas E Cravens Astronomer University of Kansas A fascinating introduction to the recently discovered Comet Hale Bopp America Online The Comet Hale Bopp Book is a nicely illustrated guide It has been targeted at the novice and or younger audience and meets this objective admirably The text is written in a modern easy to read style and is littered with analogies which help the reader relate to such things as astronomical distance scales and the like Chapter three is typical of the books excellent non technical narrative The author manages to discuss gravity and orbital dynamics in just 9 pages yet leaves the reader with a clear understanding of how and why comets orbit the Sun This book is a lucid well written text and is well suited to help the novice comet enthusiast discover the delights of comet watching Vello Tabur Comet Discoverer

Comet of the Century Fred Schaaf, 1997 The twentieth century has been a disappointment comet wise but the object now approaching Comet Hale Bopp bears a striking resemblance to the Great Comet of 1811 the biggest headed and most enduringly visible comet ever known Will Hale Bopp be our Comet of the Century In this book whose publication is timed to coincide

Comet of the Century Fred Schaaf, 1996-12-10 His keen astronomical interest bubbles from every page The book we will still be consulting a decade from now is Schaaf's SKY TELESCOPE The book of the century on comets NORTHERN LIGHTS The book that will still be useful long after Hale Bopp has dimmed from view is Schaaf's Comet of the Century SPACE VIEWS So well written that it will appeal even to the reader who does not know the difference between an asteroid and an adenoid PATRICK MOORE

astronomers the holy grail of observation is to discover a comet not least because comets always bear the name of their discoverer

Hunting and Imaging Comets was written for comet hunters and digital imagers who want to discover rediscover monitor and make pictures of comets using astronomical CCD cameras and DSLRs The old days of the purely visual comet hunter are pretty much over but this is not to say that amateurs have lost interest in finding comets The books also covers the discovery of comet fragments in the SOHO image data CCD monitoring of older comets prone to violent outbursts the imaging of new NEOs Near Earth Objects that have quite often been revealed as comets not asteroids by amateur astronomers and the finding of recent comets impacting Jupiter

Great Comets Robert Burnham, 2000-05-04 Spectacular and mysterious objects that come and go in the night sky comets have dwelt in our popular culture for untold ages As remnants from the formation of the Solar system they are objects of key scientific research and space missions As one of nature s most potent and dramatic dangers they pose a threat to our safety and yet they were the origin of our oceans and perhaps even life itself This beautifully illustrated book tells the story of the biggest and most awe inspiring of all comets those that have earned the title Great Robert Burnham focuses on the Great comets Hyakutake in 1996 and Hale Bopp in 1997 which gripped attention worldwide because for many they were the first comets ever seen He places these two recent comets in the context of their predecessors from past ages among them the famous Comet Halley *Great Comets* explains the exciting new discoveries that have come from these magnificent objects and profiles the spaceprobes to comets due for launch in the next few years The book even takes a peek behind Hollywood s science fiction fantasies to assess the real risks humanity faces from potential impacts of both comets and asteroids For everyone interested in astronomy this exciting book reveals the secrets of the Great Comets and provides essential tools for keeping up to date with comet discoveries in the future Robert Burnham has been an amateur astronomer since the mid 1950s He has been a senior editor of *Astronomy* magazine 1986-88 and is the author of many books and CD ROMS including *Comet Hale Bopp Find and Enjoy the Great Comet* and *Comet Explorer*

Popular Mechanics ,1995-12 Composition and Origin of Cometary Materials K. Altwegg,P. Ehrenfreund,Johannes Geiss,W.F. Huebner,2012-12-06 Comet nuclei are the most primitive bodies in the solar system They have been created far away from the early Sun and their material properties have been altered the least since their formation Thus the composition and structure of comet nuclei provide the best information about the chemical and thermodynamic conditions in the nebula from which our solar system formed In this volume cometary experts review a broad spectrum of ideas and conclusions based on in situ measurement of Comet Halley and remote sensing observations of the recent bright Comets Hale Bopp and Hyakutake The chemical character of comet nuclei suggests many close similarities with the composition of interstellar clouds It also suggests material mixing from the inner solar nebula and challenges the importance of the accretion shock in the outer nebula The book is intended to serve as a guide for researchers and graduate students working in the field of planetology and solar system exploration Several special indexes focus the reader s attention to detailed results and discussions It concludes with recommendations for laboratory investigations and for advanced modeling of comets the solar nebula and the collapse of interstellar clouds Inside Out Dana Xavier Kerola,2009-05-27 This work is a new look at the age old philosophical question of the mind body duality The author adeptly demonstrates that there is not really any conflict in the two seemingly opposing views When it is realized that the universe is governed purely by physical laws the supposed dichotomy dissolves Inspired by his long running exploration of the panorama of pop music the author blends in references to song lyrics as he explains the ways in which the lives of human beings are inextricably tied to the larger precedent world of planets stars and galaxies His personal reflections on reality include topics ranging from the epistemology of satellite remote sensing to fundamental discussions of anthropology astronomy and atmospheric science He also offers thoughtful commentary on our quest to continue present and future space exploration as he forecasts what will become of the universe and us in the very distant future Inside Out Looking for Ourselves in Time and Space will appeal to both the general reader and research scientists alike *Hale and Bopp* John David,Blanchette, Dave,2003
