Examination of Musculoskeletal Injuries Sandra J. Shultz,Peggy A. Houglum,David H. Perrin,2015-11-10 Examination of Musculoskeletal Injuries Fourth Edition With Web Resource guides current and future athletic trainers and rehabilitation professionals through the examination and evaluation of musculoskeletal injuries both on and off the field The text presents injury examination strategies in on site acute and clinical settings and provides the information on mastering the skills needed for the Board of Certification examination for athletic trainers as determined by the sixth edition of Athletic Training Role Delineation Study Practice Analysis for entry level athletic trainers This updated

fourth edition contains foundational information on a wide spectrum of injuries and the appropriate tests for examining and diagnosing them. Readers will learn to obtain an accurate injury history from the patient, inspect the injury and related areas, test motion, control palpate both bone and soft tissues, and examine function in order to gauge the player's readiness to return to play. The fourth edition also includes the following enhancements: A new online video library contains more than 51 short video clips that correspond to and demonstrate evaluation techniques for various musculoskeletal disorders found throughout the text. Full color photos and medical artwork have been added throughout the text to clarify testing techniques and enhance knowledge of relevant body structures. Substantial updates provide the most recent evidence based clinical information. An expanded selection of special tests and injury specific examinations are now presented in a more accessible format and include a photo or video description of the purpose, patient and clinician positions for the test procedures performed, and possible outcomes. The content of *Examination of Musculoskeletal Injuries Fourth Edition With Web Resource* has been restructured and focused to provide applicable information in a straightforward manner. Part I is aimed at entry level students and presents general and introductory skills for each component of injury examination including basic terminology and a breakdown of the examination procedure. Each component is then explored in depth along with general purposes and techniques. Part I ends by incorporating the various components into a systematic strategy for examination based on severity of injury and environment. Part II then applies the principles learned in the previous chapters to the recognition and examination of injuries organized by specific regions of the body. Each chapter includes strategies for examination immediately after an injury as well as examinations seen later in a clinical setting. To assist student comprehension and knowledge retention, key terms are in boldface throughout the text and are defined in the glossary. Symbols throughout the text alert students to essential procedures and highlight important information. The web resource houses printable tables of special tests, examination checklists, and forms that students can use in laboratory work and review sessions, and a robust video library. To aid instructors, the text includes a suite of ancillary materials featuring a test package, instructor guide, and presentation package, plus image bank. *Examination of Musculoskeletal Injuries Fourth Edition With Web Resource* is an essential resource for students of athletic training and therapy, as well as current practitioners in the field who wish to use evidence based procedures in their clinical practice to ensure safe and accurate diagnoses of injuries. **Thieme**

Comparative Anatomy and Phylogeny of Primate Muscles and Human Evolution Rui Diogo,Bernard A. Wood,2012-01-11 This book challenges the assumption that morphological data are inherently unsuitable for phylogeny reconstruction argues that both molecular and morphological phylogenies should play a major role in systematics and provides the most comprehensive review of the comparative anatomy homologies and evolution of the head neck pectoral and upper limb muscles of primates Chapters 1 and 2 provide an introduction to the main aims and methodology of the book Chapters 3 and 4 and Appendices I and II present the data obtained from dissections of the head neck pectoral and upper limb muscles of representative members of all the major primate groups including modern humans and compare these data with the information available in the literature Appendices I and II provide detailed textual attachments innervation function variations and synonyms and visual high quality photographs information about each muscle for the primate taxa included in

the cladistic study of Chapter 3 thus providing the first comprehensive and up to date overview of the comparative anatomy of the head neck pectoral and upper limb muscles of primates The most parsimonious tree obtained from the cladistic analysis of 166 head neck pectoral and upper limb muscle characters in 18 primate genera and in representatives of the Scandentia Dermoptera and Rodentia is fully congruent with the evolutionary molecular tree of Primates thus supporting the idea that muscle characters are particularly useful to infer phylogenies The combined anatomical materials provided in this book point out that modern humans have fewer head neck pectoral and upper limb muscles than most other living primates but are consistent with the proposal that facial and vocal communication and specialized thumb movements have probably played an important role in recent human evolution This book will be of interest to primatologists comparative anatomists functional morphologists zoologists physical anthropologists and systematists as well as to medical students physicians and researchers interested in understanding the origin evolution homology and variations of the muscles of modern humans
