Heavy Weather Avoidance and Route Design Mike Ma-Li Chen, Lee S. Chesneau,2008-10 In Heavy Weather Avoidance Chen and Chesneau merge the seamanship of a master mariner and the forecast expertise of a senior meteorologist providing readers with double barrel exposure to what actually goes on in the atmosphere and on the sea s surface Mariners and recreational sailors are more concerned about the implications of volatile weather rather than its fluid dynamics From start to finish the authors have cut to the chase creating a readable text brimming with useful graphics It s focused on the root cause of how and why bad weather develops and where it s likely to go There s enough theory provided for a reader to get a feel for how air mass energy transfer works but just as the theoretical aspect takes on a mission of its own there s a shift to more practical self forecasting and storm avoidance wisdom Captain Ma Li Chen shares his well tested routing strategy and describes how it factors in the use of the 500 Mb chart

Searching for 2D Superconductivity in La2-xSrxCuO4 Single Crystals Itzik Kapon,2019-07-11 A new experimental method the Stiffnessometer is developed to measure elementary properties of a superconductor including the superconducting stiffness and the critical current This technique has many advantages over existing methods such as the ability to measure these properties while minimally disturbing the system the ability to measure large penetration depths comparable to sample size as necessary when approaching the critical temperature and the ability to measure critical currents without attaching contacts and heating the sample The power of this method is demonstrated in a study of the penetration depth of LSCO where striking evidence is found for two separate critical temperatures for the in plane and out of plane directions The results in the thesis are novel important and currently have no theoretical explanation The stiffnessometer is a tool with great potential to explore new grounds in condensed matter physics
