Logic And Language:

Logic, Language, and Meaning L. T. F. Gamut,1991 Logic, Language, and Meaning, Volume 1 L. T. F. Gamut,1991
Although the two volumes of Logic Language and Meaning can be used independently of one another together they provide a comprehensive overview of modern logic as it is used as a tool in the analysis of natural language Both volumes provide exercises and their solutions Volume 1 Introduction to Logic begins with a historical overview and then offers a thorough introduction to standard propositional and first order predicate logic It provides both a syntactic and a semantic approach to inference and validity and discusses their relationship Although language and meaning receive special attention this introduction is also accessible to those with a more general interest in logic In addition the volume contains a survey of such topics as definite descriptions restricted quantification second order logic and many valued logic The pragmatic approach to non truthconditional and conventional implicatures are also discussed Finally the relation between logic and formal syntax is treated and the notions of rewrite rule automation grammatical complexity and language hierarchy are explained **Logic, Language, and Meaning: Intentional logic and logical grammar** L. T. F. Gamut,1991 **Logic and Language** Gilbert Ryle,1963 Logic, Language, and Meaning. Vol. 2 L. T. F. Gamut,1991 **Logic, Language and Philosophy** Fenrong Liu,Martin J. B. Stokhof,2024 This book provides a first introduction to two key systems that play a role in any variety or application of logic classical propositional logic and classical predicate logic It also contains pointers to variations and alternatives to logics that deal with a wider range of concepts This book provides examples of the application of logic to philosophical problems and illustrates some of the philosophical problems that are raised by logic itself This book aims to give the reader a first glimpse of the wide variety of tastes smells and textures that await them once they have trained their palate to appreciate the standard dishes of the logic cuisine *Meaning and Argument* Ernest Lepore,Sam Cumming,2009-08-24 This book shifts introductory logic from the traditional emphasis on proofs to the symbolization of arguments Handbook of Logic and Language Johan F.A.K. van Benthem,Alice ter Meulen,2010-12-17 The logical study of language is becoming more interdisciplinary playing a role in fields such as computer science artificial intelligence cognitive science and game theory This new edition written by the leading experts in the field presents an overview of the latest developments at the interface of logic and linguistics as well as a historical perspective It is divided into three parts covering Frameworks General Topics and Descriptive Themes Completely revised and updated includes over 25% new material Discusses the interface between logic and language Many of the authors are creators or active developers of the theories
 Handbook of Logic and Language J. van Benthem,Alice G. B. ter Meulen,1997 This Handbook documents the main trends in current research between logic and language including its broader influence in computer science linguistic theory and cognitive science The history of the combined study of Logic and Linguistics goes back a long way at least to the work of the scholastic philosophers in the Middle Ages At the beginning of this century the subject was revitalized through the

pioneering efforts of Gottlob Frege Bertrand Russell and Polish philosophical logicians such as Kazimierz Ajdukiewicz Around 1970 the landmark achievements of Richard Montague established a junction between state of the art mathematical logic and generative linguistic theory Over the subsequent decades this enterprise of Montague Grammar has flourished and diversified into a number of research programs with empirical and theoretical substance This appears to be the first Handbook to bring logic language interface to the fore Both aspects of the interaction between logic and language are demonstrated in the book i e firstly how logical systems are designed and modified in response to linguistic needs and secondly how mathematical theory arises in this process and how it affects subsequent linguistic theory The Handbook presents concise impartial accounts of the topics covered Where possible an author and a commentator have cooperated to ensure the proper breadth and technical content of the papers The Handbook is self contained and individual articles are of the highest quality

On the Logic and Learning of Language Sean A. Fulop, 2004-10-14 This book presents the author's research on automatic learning procedures for categorial grammars of natural languages The research program spans a number of intertwined disciplines including syntax semantics learnability theory logic and computer science The theoretical framework employed is an extension of categorial grammar that has come to be called multimodal or type logical grammar The first part of the book presents an expository summary of how grammatical sentences of any language can be deduced with a specially designed logical calculus that treats syntactic categories as its formulae Some such Universal Type Logic is posited to underlie the human language faculty and all linguistic variation is captured by the different systems of semantic and syntactic categories which are assigned in the lexicons of different languages The remainder of the book is devoted to the explicit formal development of computer algorithms which can learn the lexicons of type logical grammars from learning samples of annotated sentences The annotations consist of semantic terms expressed in the lambda calculus and may also include an unlabeled tree structuring over the sentence The major features of the research include the following We show how the assumption of a universal linguistic component the logic of language is not incompatible with the conviction that every language needs a different system of syntactic and semantic categories for its proper description The supposedly universal linguistic categories descending from antiquity noun verb etc are summarily discarded Languages are here modeled as consisting primarily of sentence trees labeled with semantic structures a new mathematical class of such term labeled tree languages is developed which cross cuts the well known Chomsky hierarchy and provides a formal restrictive condition on the nature of human languages The human language acquisition mechanism is postulated to be biased such that it assumes all input language samples are drawn from the above syntactically homogeneous class in this way the universal features of human languages arise not just from the innate logic of language but also from the innate biases which govern language learning This project represents the first complete explicit attempt to model the acquisition of human language since Steve Pinker's groundbreaking 1984 publication *Language Learnability and Language Development* *Categories and*

Types in Logic, Language, and Physics Claudia Casadio, Bob Coecke, Michael Moortgat, Philip Scott, 2014-04-03 For more than 60 years Jim Lambek has been a profoundly inspirational mathematician with groundbreaking contributions to algebra category theory linguistics theoretical physics logic and proof theory This Festschrift was put together on the occasion of his 90th birthday The papers in it give a good picture of the multiple research areas where the impact of Jim Lambek's work can be felt The volume includes contributions by prominent researchers and by their students showing how Jim Lambek's ideas keep inspiring upcoming generations of scholars

Logic, Language, and Computation Nick Bezhanishvili, Sebastian Löbner, Kerstin Schwabe, Luca Spada, 2011-07-18 Edited in collaboration with FoLLI the Association of Logic Language and Information this book constitutes the refereed proceedings of the 8th International Tbilisi Symposium on Logic Language and Computation TbiLLC 2009 held in Bakuriani Georgia in September 2009 The 20 revised full papers included in the book were carefully reviewed and selected from numerous presentations given at the symposium The focus of the papers is on the following topics natural language syntax semantics and pragmatics constructive modal and algebraic logic linguistic typology and semantic universals logics for artificial intelligence information retrieval query answer systems logic games and formal pragmatics language evolution and learnability computational social choice historical linguistics history of logic

The Logic of Language Pieter A. M. Seuren, 2009-10-29 The Logic of Language opens a new perspective on logic Pieter Seuren argues that the logic of language derives from the lexical meanings of the logical operators These meanings however prove not to be consistent Seuren solves this problem through an in-depth analysis of the functional adequacy of natural predicate logic and standard modern logic for natural linguistic interaction He then develops a general theory of discourse bound interpretation covering discourse incrementation anaphora presupposition and topic comment structure all of which the author claims form the cement of discourse structure This is the second of a two volume foundational study of language published under the title Language from Within Pieter Seuren discusses such apparently diverse issues as the ontology underlying the semantics of language speech act theory intensionality phenomena the machinery and ecology of language sentential and lexical meaning the natural logic of language and cognition and the intrinsically context sensitive nature of language and shows them to be intimately linked Throughout his ambitious enterprise he maintains a constant dialogue with established views reflecting their development from Ancient Greece to the present The resulting synthesis concerns central aspects of research and theory in linguistics philosophy and cognitive science

Logic, Language, Information, and Computation Lev D. Beklemishev, Ruy de Queiroz, 2011-05-02 This book constitutes the refereed proceedings of the 18th Workshop on Logic Language Information and Communication WoLLIC 2011 held in Philadelphia PA USA in May 2011 The 21 revised full papers presented were carefully reviewed and selected from 35 submissions Among the topics covered are various aspects of mathematical logic computer science logics philosophical logics such as complexity theory model theory partial order Hoare logics hybrid logics Turing machines etc

Logic, Language and Reasoning Hans Jürgen Ohlbach, U.

Reyle, 2012-12-06 This volume is dedicated to Dov Gabbay who celebrated his 50 birthday in October 1995. Dov is one of the most outstanding and most productive researchers we have ever met. He has exerted a profound influence in major fields of logic, linguistics and computer science. His contributions in the areas of logic, language and reasoning are so numerous that a comprehensive survey would already fill half of this book. Instead of summarizing his work, we decided to let him speak for himself. Sitting in a car on the way to Amsterdam airport, he gave an interview to Jelle Gerbrandy and Anne Marie Mineur. This recorded conversation with him, which is included, gives a deep insight into his motivations and into his view of the world, the Almighty and, of course, the role of logic. In addition, this volume contains a partially annotated bibliography of his main papers and books. The length of the bibliography and the broadness of the topics covered there speak for itself. Logic, Language, and the Structure of Scientific Theories Wesley C. Salmon, Gereon Wolters, 1994-01-15. Logic, Language, and the Structure of Scientific Theories the second book in the Pittsburgh Konstanz Series marks the centennial of the births of Rudolf Carnap and Hans Reichenbach. Original essays by internationally distinguished scholars range from epistemology and philosophy of language to logic, semantics, the philosophy of physics and mathematics. In the realm of philosophy of physics, it focuses upon such topics as space, time and causality, which play fundamental roles in relativity theory and quantum mechanics. **Logic, Language and Meaning** Maria Aloni, Harald Bastiaanse, Tjitze de Jager, Katrin Schulz, 2010-10-06. This book contains the revised papers presented at the Amsterdam Colloquium 2009 held in Amsterdam, The Netherlands, in December 2009. The 41 thoroughly refereed and revised contributions, presented together with the revised abstracts of 5 invited talks, are organized in five sections. The first section contains extended abstracts of the talks given by the invited speakers. The second, third and fourth sections contain invited and submitted contributions to the three thematic workshops hosted by the colloquium: the Workshop on Implicature and Grammar, the Workshop on Natural Logic and the Workshop on Vagueness. The final section consists of submissions to the general program. The topics covered range from descriptive syntactic and semantic analyses of all kinds of expressions to theoretical logical and computational properties of semantic theories, philosophical foundations, evolution and learning of language. **Logic, Language, and Probability** R. Bogdan, I. Niiniluoto, 2012-12-06. The Fourth International Congress for Logic, Methodology and Philosophy of Science was held in Bucharest, Romania, on August 29–September 4, 1971. The Congress was organized under the auspices of the International Union for History and Philosophy of Science, Division of Logic, Methodology and Philosophy of Science, by the Academy of the Socialist Republic of Romania, the Academy of Social and Political Sciences of the Socialist Republic of Romania and the Ministry of Education of Romania. With more than eight hundred participating scholars from thirty-four countries, the Congress was one of the major scientific events of the year 1971. The dedicated efforts of the organizers, the rich and carefully planned program and the warm and friendly atmosphere contributed to making the Congress a successful and fruitful forum of exchange of scientific ideas. The work of the Congress consisted of invited one-hour and half-hour addresses.

symposia and contributed papers The proceedings were organized into twelve sections of Mathematical Logic Foundations of Mathematical Theories Automata and Programming Languages Philosophy of Logic and Mathematics General Problems of Methodology and Philosophy of Science Foundations of Probability and Induction Methodology and Philosophy of Physical Sciences Methodology and Philosophy of Biological Sciences Methodology and Philosophy of Psychological Sciences Methodology and Philosophy of Historical and Social Sciences Methodology and Philosophy of Linguistics and History of Logic Methodology and Philosophy of Science Logic, Language, and Metaphysics Richard Milton Martin, 1971-01-01
