ZB 2000: Formal Specification and Development in Z and B Jonathan P. Bowen, Steve Dunne, Andrew Galloway, Steve King, 2000-08-16 This book constitutes the refereed proceedings of the First International Conference of B and Z Users ZB 2000 held in York UK in August September 2000 The 25 revised full papers presented together with four invited contributions were carefully reviewed and selected for inclusion in the book The book documents the recent advances for the Z formal specification notion and for the B method the full scope ranging from foundational and theoretical issues to advanced applications tools and case studies is covered *Proof, Language, and Interaction* Robin Milner, 2000 This collection of essays reflects the breadth of research in computer science Following a biography of Robin Milner it contains sections on semantic foundations programming logic programming languages concurrency and mobility **Logic and Specification** Cornelis A. Middelburg, 1993 *Engineering Trustworthy Software Systems* Jonathan P. Bowen, Zhiming Liu, Zili Zhang, 2018-11-12 This volume contains a record of some of the lectures and seminars delivered at the Third International School on Engineering Trustworthy Software Systems SETSS 2017 held in April 2017 at Southwest University in Chongqing China The six contributions included in this volume provide an overview of leading edge research in methods and tools for use in computer system engineering They have been distilled from six original courses delivered at the school on topics such as rely guarantee thinking Hoare style specification and verification of object oriented programs with JML logic specification verification and interactive proof software model checking with Automizer writing programs and proofs engineering self adaptive software intensive systems and with an additional contribution on the challenges for formal semantic description The material is useful for postgraduate students researchers academics and industrial engineers who are interested in the theory and practice of methods and tools for the design and programming of trustworthy software systems Specification of Abstract Data Types Jacques Loeckx, Hans-Dieter Ehrich, Markus Wolf, 1996-12-11 Specification of Abstract Data Types provides an authoritative introduction to the mathematical foundations of algebraic program specification Unlike most other publications on the subject this book does not draw on category theory but instead tries to demystify the topic and promote its use in practical applications It clearly distinguishes between the study of algebras logic specification methods and specification languages and it avoids focusing on a particular logic or a particular specification method After an informal discussion on the design of reliable software the book presents the main notions and properties of algebras Next it investigates logic introducing a general notion of logic encompassing those commonly used On the basis of these fundamentals it describes in some detail three specification methods and the principles of specification languages It concludes with a case study illustrating the use of abstract data type specification in software design While treating the subject with mathematical precision the book contains numerous examples exercises and comments to provide a deeper understanding of concepts discussed It was conceived as a student textbook but will also be a useful source of reference for

Documentation Abstracts, 1993 Conference Proceedings, 1992 Combining VDM-SL Specifications with C++ Code Brigitte Fröhlich, Peter Gorm Larsen, 1995 Abstract Experience shows that it is not economically feasible to formally specify all parts of a system in an industrial application Either one already has a number of existing components which are trusted and therefore desirable for reuse or components are so simple that there is no gain in formally specifying their behaviour In both cases it may be felt that it is not worth spending time on developing a detailed formal specification of the entire system This raises two important questions 1 what skills are required to be able to select the parts of a system for which a formal specification is beneficial and 2 what tools should be provided for the analysis of the entire system in which actual code is combined with specifications In this paper we propose a solution to the second question by extending the IFAD VDM SL Toolbox such that heterogeneous models can be interpreted *A Modern Isabelle-based Prover for VDM's Logic of Partial Functions* George Karabotsos, 2005 Specification and verification tools often employ theorem proving technology This technology encompasses an underlying logic encoded in a theorem prover VDM LPF first developed by Sten Agerholm and Jacob Frost in 1996 encodes VDM's Logic of Partial Functions LPF by extending the generic theorem prover Isabelle Because of Isabelle's powerful syntax facilities terms in this logic are written using a subset of the VDM SL specification language In this thesis we provide the reader with a detailed description of the steps we undertake to revive the VDM LPF logic by upgrading it to the latest Isabelle version namely Isabelle2005 and by using its latest Intelligible Semi Automated Reasoning Isar theory syntax We first provide a description of the Isabelle theorem prover its generic design and the unique facilities it provides for extending itself and developing new object logics We then explain in detail the original VDM LPF system as developed for the Isabelle94 8 We describe all the necessary modifications that were needed to perform the upgrade Finally

a number of proofs are performed using the upgraded VDM LPF system that form a case study The VDM-SL Reference Guide John Dawes, 1991-12-31 The readership will not just consist of programmers It will also appeal to system designers to customers wishing to specify their requirements to evaluators of systems and to lecturers and software engineering students In short anyone who wants to read a VDM specification More with understanding 2nd 3rd year computer science courses particularly software engineering It is anticipated as the first book on the new BSI ISO standard for VDM the author is secretary to BSI committee and the VD is the leading European formal method in practice The use of formal methods of system specification and design ie methods based on mathematical principles is spreading out from the specialised areas of extremely high reliability security and life critical systems as the advantages of unambiguous specification and verifiable design are becoming more and more widely appreciated This increased use is paralleled by the growth of the infrastructure of computer based tools books courses conferences and standardisation efforts The Vienna Development Method is a formal method for the specification and design of systems It was devised in the IBM Vienna laboratory It is the leading general purpose formal method in Europe its only serious rival is Z from the programming research group at Oxford This book forms a comprehensive and accessible reference to the features methodology and application of the BSI ISO standard for VDM
