**Computational Logic** Dov M. Gabbay, Jörg H. Siekmann, John Woods, 2014-12-09 Handbook of the History of Logic brings to the development of logic the best in modern techniques of historical and interpretative scholarship Computational logic was born in the twentieth century and evolved in close symbiosis with the advent of the first electronic

computers and the growing importance of computer science informatics and artificial intelligence With more than ten thousand people working in research and development of logic and logic related methods with several dozen international conferences and several times as many workshops addressing the growing richness and diversity of the field and with the foundational role and importance these methods now assume in mathematics computer science artificial intelligence cognitive science linguistics law and many engineering fields where logic related techniques are used inter alia to state and settle correctness issues the field has diversified in ways that even the pure logicians working in the early decades of the twentieth century could have hardly anticipated Logical calculi which capture an important aspect of human thought are now amenable to investigation with mathematical rigour and computational support and fertilized the early dreams of mechanised reasoning *Calculus* The Dartmouth Conference in 1956 generally considered as the birthplace of artificial intelligence raised explicitly the hopes for the new possibilities that the advent of electronic computing machinery offered logical statements could now be executed on a machine with all the far reaching consequences that ultimately led to logic programming deduction systems for mathematics and engineering logical design and verification of computer software and hardware deductive databases and software synthesis as well as logical techniques for analysis in the field of mechanical engineering This volume covers some of the main subareas of computational logic and its applications Chapters by leading authorities in the field Provides a forum where philosophers and scientists interact Comprehensive reference source on the history of logic

pragmatics frames in natural language semantics linguistic typology and discourse phenomena The papers in the Logic and Computation section cover such topics as constructive modal algebraic and philosophical logic as well as logics for computer science applications

**The Essence of Computation** Torben Mogensen, David Schmidt, I. Hal Sudborough, 2003-07-01 By presenting state of the art aspects of the theory of computation this book commemorates the 60th birthday of Neil D Jones whose scientific career parallels the evolution of computation theory itself The 20 reviewed research papers presented together with a brief survey of the work of Neil D Jones were written by scientists who have worked with him in the roles of student colleague and in one case mentor In accordance with the Festschrift's subtitle the papers are organized in parts on computational complexity program analysis and program transformation

**Adapting Proofs-as-Programs** Iman Poernomo, John N. Crossley, Martin Wirsing, 2007-04-27 This monograph details several important advances in the direction of a practical proofs as programs paradigm which constitutes a set of approaches to developing programs from proofs in constructive logic with applications to industrial scale complex software engineering problems One of the book's central themes is a general abstract framework for developing new systems of programs synthesis by adapting proofs as programs to new contexts

**Computational Logic: Logic Programming and Beyond** Antonis C. Kakas, Fariba Sadri, 2003-08-02 Alan Robinson This set of essays pays tribute to Bob Kowalski on his 60th birthday an anniversary which gives his friends and colleagues an excuse to celebrate his career as an original thinker a charismatic communicator and a forceful intellectual leader The logic programming community hereby and herein conveys its respect and thanks to him for

his pivotal role in creating and fostering the conceptual paradigm which is its *raison d'être*. The diversity of interests covered here reflects the variety of Bob's concerns. Read on! It is an intellectual feast. Before you begin, permit me to send him a brief personal but public message: Bob, how right you were and how wrong I was! I should explain. When Bob arrived in Edinburgh in 1967, resolution was as yet fairly new, having taken several years to become at all widely known. Research groups to investigate various aspects of resolution sprang up at several institutions, the one organized by Bernard Meltzer at Edinburgh University being among the first. For the half-dozen years that Bob was a leading member of Bernard's group, I was a frequent visitor to it and I saw a lot of him. We had many discussions about logic, computation and language.

**Computing Meaning** Harry Bunt, Reinhard Muskens, 2008-07-03. This book provides an in-depth view of the current issues, problems and approaches in the computation of meaning as expressed in language. Aimed at linguists, computer scientists and logicians with an interest in the computation of meaning, this book focuses on two main topics in recent research in computational semantics. The first topic is the definition and use of underspecified semantic representations, i.e. formal structures that represent part of the meaning of a linguistic object while leaving other parts unspecified. The second topic discussed is semantic annotation. Annotated corpora have become an indispensable resource both for linguists and for developers of language and speech technology, especially when used in combination with machine learning methods. The annotation in corpora has only marginally addressed semantic information, however, since semantic annotation methodologies are still in their infancy. This book discusses the development and application of such methodologies.

**Categories and Types in Logic, Language, and Physics** Claudia Casadio, Bob Coecke, Michael Moortgat, Philip Scott, 2014-04-03. For more than 60 years, Jim Lambek has been a profoundly inspirational mathematician with groundbreaking contributions to algebra, category theory, linguistics, theoretical physics, logic and proof theory. This *Festschrift* was put together on the occasion of his 90th birthday. The papers in it give a good picture of the multiple research areas where the impact of Jim Lambek's work can be felt. The volume includes contributions by prominent researchers and by their students, showing how Jim Lambek's ideas keep inspiring upcoming generations of scholars.

[The Handbook of Contemporary Semantic Theory](#) Shalom Lappin, Chris Fox, 2019-02-12. The second edition of *The Handbook of Contemporary Semantic Theory* presents a comprehensive introduction to cutting-edge research in contemporary theoretical and computational semantics. Features completely new content from the first edition of *The Handbook of Contemporary Semantic Theory*. Features contributions by leading semanticists who introduce core areas of contemporary semantic research while discussing current research. Suitable for graduate students for courses in semantic theory and for advanced researchers as an introduction to current theoretical work.

*Computation, Physics and Beyond* Michael J. Dinneen, Bakhadyr Khoussainov, Prof. Andre Nies, André Nies, 2012-01-17. This *Festschrift* volume has been published in honor of Cristian Calude on the occasion of his 60th birthday and contains contributions from invited speakers and regular papers presented at the International Workshop on Theoretical

Computer Science WTCS 2012 held in Auckland New Zealand in February 2012 Cristian Calude has made a significant contribution to research in computer science theory Along with early work by Chaitin Ku era Kurtz Solovay and Terwijn his papers published in the mid 1990s jointly with Khoussainov Hertling and Wang laid the foundation for the development of modern theory of algorithmic randomness His work was essential for establishing the leading role of New Zealand in this area The research interests of Cristian Calude are reflected in the topics covered by the 32 papers included in this book namely algorithmic information theory algorithms automata and formal languages computing and natural sciences computability and applications logic and applications philosophy of computation physics and computation and unconventional models of computation They have been organized into four parts The first part consists of papers discussing his life achievements This is followed by papers in the three general areas of complexity computability and randomness physics philosophy and logic and computation and algorithms automata and formal models including unconventional computing
