design and organize moderate to large Prolog programs providing a collection of eight programming projects each with a particular application and illustrating how a Prolog program was written to solve the application. These range from a simple learning program to designing a database for molecular biology to natural language generation from plans and stream data analysis. Leon Sterling is Associate Professor in the Department of Computer Engineering and Science at Case Western Reserve University. He is the coauthor along with Ehud Shapiro of *The Art of Prolog*. Contents: A Simple Learning Program; Richard O. Keefe, Designing a Prolog Database for Molecular Biology; Ewing Lusk, Robert Olson, Ross Overbeek, Steve Tuecke, Parallelizing a Pascal Compiler; Eran Gabber, PREDITOR: A Prolog Based VLSI Editor; Peter B. Art of Prolog Leon Sterling, Ehud Y. Shapiro, 1994. This second edition contains revised chapters taking into account recent research advances. More advanced exercises have been included and Part II The Prolog Language has been modified to be compatible with the new Prolog standard. This is a graduate level text that can be used for self study. **Abductive**

Reasoning and Learning Dov M. Gabbay, Philippe Smets, 2013-04-17. This book contains leading survey papers on the various aspects of Abduction both logical and numerical approaches. Abduction is central to all areas of applied reasoning including artificial intelligence, philosophy of science, machine learning, data mining, and decision theory as well as logic itself.

Logic-Based Program Synthesis and Transformation Pierre Flener, 1999-03-24. This book presents the thoroughly refereed post-workshop proceedings of the 8th International Workshop on Logic Based Program Synthesis and Transformation LOPSTR 98 held in Manchester UK in June 1998. The 16 revised full papers presented were carefully reviewed and selected during three rounds of inspection from a total of initially 36 extended abstracts submitted. Also included are eight short papers. Among the topics covered are logic specification, mathematical program construction, logic programming, computational logics, inductive program synthesis, constraint logic programs, and mathematical foundations. **Concurrent**

Constraint Programming Vijay Saraswat, 1993. Concurrent Constraint Programming introduces a new and rich class of programming languages based on the notion of computing with partial information or constraints that synthesize and extend work on concurrent logic programming and that offer a promising approach for treating thorny issues in the semantics of concurrent nondeterministic programming languages. Saraswat develops an elegant and semantically tractable framework for computing with constraints, emphasizing their importance for communication and control in concurrent programming languages. He describes the basic paradigm, illustrates its structure, discusses various augmentations, gives a simple implementation of a concrete language, and specifies its connections with other formalisms. In this framework, concurrently executing agents communicate by placing and checking constraints on shared variables in a common store. The major form of concurrency control in the system is through the operations of Atomic Tell: an agent may instantaneously place constraints

only if they are consistent with constraints that have already been placed and Blocking Ask an agent must block when it checks a constraint that is not yet known to hold Other operations at a finer granularity of atomicity are also presented Saraswat introduces and develops the concurrent constraint family of programming languages based on these ideas shows how various constraint systems can naturally realize data structures common in computer science and presents a formal operational semantics for many languages in the concurrent constraint family In addition he provides a concrete realization of the paradigm on a sequential machine by presenting a compiler for the concurrent constraint language Herbrand and demonstrates a number of constraint based concurrent programming techniques that lead to novel presentations of algorithms for many concurrent programming problems

Knowledge Incorporation in Evolutionary Computation Yaochu Jin, 2013-04-22 Incorporation of a priori knowledge such as expert knowledge meta heuristics and human preferences as well as domain knowledge acquired during evolutionary search into evolutionary algorithms has received increasing interest in the recent years It has been shown from various motivations that knowledge incorporation into evolutionary search is able to significantly improve search efficiency However results on knowledge incorporation in evolutionary computation have been scattered in a wide range of research areas and a systematic handling of this important topic in evolutionary computation still lacks This edited book is a first attempt to put together the state of art and recent advances on knowledge incorporation in evolutionary computation within a unified framework Existing methods for knowledge incorporation are divided into the following five categories according to the functionality of the incorporated knowledge in the evolutionary algorithms 1 Knowledge incorporation in representation population initialization combination and mutation 2 Knowledge incorporation in selection and reproduction 3 Knowledge incorporation in fitness evaluations 4 Knowledge incorporation through life time learning and human computer interactions 5 Incorporation of human preferences in multi objective evolutionary computation The intended readers of this book are graduate students researchers and practitioners in all fields of science and engineering who are interested in evolutionary computation The book is divided into six parts Part I contains one introductory chapter titled A selected introduction to evolutionary computation by Yao which presents a concise but insightful introduction to evolutionary computation

Abduction and Induction P.A. Flach, Antonis Hadjiantonis, 2013-04-18 From the very beginning of their investigation of human reasoning philosophers have identified two other forms of reasoning besides deduction which we now call abduction and induction Deduction is now fairly well understood but abduction and induction have eluded a similar level of understanding The papers collected here address the relationship between abduction and induction and their possible integration The approach is sometimes philosophical sometimes that of pure logic and some papers adopt the more task oriented approach of AI The book will command the attention of philosophers logicians AI researchers and computer scientists in general
