Williams,2000-04-28 Combining Artificial Neural Networks to Symbolic and Algebraic computation **David Makinson on Classical Methods for Non-Classical Problems** Sven Ove Hansson,2013-12-20 The volume analyses and develops David Makinson s efforts to make classical logic useful outside its most obvious application areas The book contains chapters that analyse appraise or reshape Makinson s work and chapters that develop themes emerging from his contributions These are grouped into major areas to which Makinsons has made highly influential contributions and the volume in its entirety is divided into four sections each devoted to a particular area of logic belief change uncertain reasoning normative systems and the resources of classical logic Among the contributions included in the volume one chapter focuses on the inferential preferential method i e the combined use of classical logic and mechanisms of preference and choice and provides examples from Makinson s work in non monotonic and defeasible reasoning and belief revision One chapter offers a short autobiography by Makinson which details his discovery of modern logic his travels across continents and reveals his intellectual encounters and inspirations The chapter also contains an unusually explicit statement on his views on the limited but important role of logic in philosophy Artificial Intelligence for Advanced Problem Solving Techniques Vlahavas, Ioannis,Vrakas, Dimitris,2008-01-31 One of the most important functions of artificial intelligence automated problem solving consists mainly of the development of software systems designed to find solutions to problems These systems utilize a search space and algorithms in order to reach a solution Artificial Intelligence for Advanced Problem Solving Techniques offers scholars and practitioners cutting edge research on algorithms and techniques such as search domain independent heuristics

scheduling constraint satisfaction optimization configuration and planning and highlights the relationship between the search categories and the various ways a specific application can be modeled and solved using advanced problem solving techniques

Building Bridges between Soft and Statistical Methodologies for Data Science Luis A. García-Escudero, Alfonso Gordaliza, Agustín Mayo, María Asunción Lubiano Gomez, Maria Angeles Gil, Przemyslaw Grzegorzewski, Olgierd Hryniewicz, 2022-08-24 Nowadays data analysis is becoming an appealing topic due to the emergence of new data types dimensions and sources This motivates the development of probabilistic statistical approaches and tools to cope with these data Different communities of experts namely statisticians mathematicians computer scientists engineers econometricians and psychologists are more and more interested in facing this challenge As a consequence there is a clear need to build bridges between all these communities for Data Science This book contains more than fifty selected recent contributions aiming to establish the above referred bridges These contributions address very different and relevant aspects such as imprecise probabilities information theory random sets and random fuzzy sets belief functions possibility theory dependence modelling and copulas clustering depth concepts dimensionality reduction of complex data and robustness Evolving Knowledge Bases João Alexandre Leite, 2003 An Evolving Knowledge Base EKB is capable of self evolution by means of its internally specified behaviour In this thesis the author incrementally specifies semantically characterizes and illustrates with examples the concepts and tools necessary to the development of EKBs Hybrid Intelligent Systems Larry R. Medsker, 2012-12-06 Hybrid Intelligent Systems summarizes the strengths and weaknesses of five intelligent technologies fuzzy logic genetic algorithms case based reasoning neural networks and expert systems reviewing the status and significance of research into their integration Engineering and scientific examples and case studies are used to illustrate principles and application development techniques The reader will gain a clear idea of the current status of hybrid intelligent systems and discover how to choose and develop appropriate applications The book is based on a thorough literature search of recent publications on research and development in hybrid intelligent systems the resulting 50 page reference section of the book is invaluable The book starts with a summary of the five major intelligent technologies and of the issues in and current status of research into them Each subsequent chapter presents a detailed discussion of a different combination of intelligent technologies along with examples and case studies Four chapters contain detailed case studies of working hybrid systems The book enables the reader to Describe the important concepts strengths and limitations of each technology Recognize and analyze potential problems with the application of hybrid systems Choose appropriate hybrid intelligent solutions Understand how applications are designed with any of the approaches covered Choose appropriate commercial development shells or tools An invaluable reference source for those who wish to apply intelligent systems techniques to their own problems Abduction in Cognition and Action John R. Shook, Sami Paavola, 2021-05-29 This book gathers together novel essays on the state of the art research into the logic and practice of abduction In many ways abduction has

become established and essential to several fields such as logic cognitive science artificial intelligence philosophy of science and methodology In recent years this interest in abduction s many aspects and functions has accelerated There are evidently several different interpretations and uses for abduction Many fundamental questions on abduction remain open How is abduction manifested in human cognition and intelligence What kinds or types of abduction can be discerned What is the role for abduction in inquiry and mathematical discovery The chapters aim at providing answer to these and other current questions Their contributors have been at the forefront of discussions on abduction and offer here their updated approaches to the issues that they consider central to abduction s contemporary relevance The book is an essential reading for any scholar or professional keeping up with disciplines impacted by the study of abductive reasoning and its novel development and applications in various fields

New Learning Paradigms in Soft Computing Lakhmi C. Jain,Janusz Kacprzyk,2002 Learning is a key issue in the analysis and design of all kinds of intelligent systems In recent time many new paradigms of automated machine learning have been proposed in the literature Soft computing that has proved to be an effective and efficient tool in so many areas of science and technology seems to offer new qualities in the realm of machine learning too The purpose of this volume is to present some new learning paradigms that have been triggered or at least strongly influenced by soft computing tools and techniques mainly related to neural networks fuzzy logic rough sets and evolutionary computations

Scientific Data Mining and Knowledge Discovery Mohamed Medhat Gaber,2009-09-19 Mohamed Medhat Gaber It is not my aim to surprise or shock you but the simplest way I can summarise is to say that there are now in the world machines that think that learn and that create Moreover their ability to do these things is going to increase rapidly until in a visible future the range of problems they can handle will be coextensive with the range to which the human mind has been applied by Herbert A Simon 1916 2001 1Overview This book suits both graduate students and researchers with a focus on discovering knowledge from scienti c data The use of computational power for data analysis and knowledge discovery in scienti c disciplines has found its roots with the re lution of high performance computing systems Computational science in physics chemistry and biology represents the rst step towards automation of data analysis tasks The rational behind the developmentof computationscience in different eas was automating mathematical operations performed in those areas There was no attention paid to the scienti c discovery process Automated Scienti c Disc ery ASD 1 3 represents the second natural step ASD attempted to automate the process of theory discovery supported by studies in philosophy of science and cognitive sciences Although early research articles have shown great successes the area has not evolved due to many reasons The most important reason was the lack of interaction between scientists and the automating systems

Semantic Computing Phillip C.-Y. Sheu,Heather Yu,C. V. Ramamoorthy,Arvind K. Joshi,Lotfi A. Zadeh,2011-07-05 Presents the state of the technology and points to future directions for semantic computing Semantic computing a rapidly evolving interdisciplinary field seeks to structure design and manipulate computer content to better satisfy the needs and intentions of

users and create a more meaningful user experience This remarkable contributed work examines the art engineering technology and applications of the field Moreover it brings together researchers from such disciplines as natural language processing software engineering multimedia semantics semantic Web signal processing and pattern recognition in order to provide a single source that presents the state of the technology and points to new breakthroughs on the horizon Semantic Computing begins with an introduction that explores the concepts technology applications and future of semantic computing Next the book is divided into four parts Part One Semantic Analysis Part Two Semantic Languages and Integration Part Three Semantic Applications Part Four Semantic Programming and Interface As readers progress through the book they ll learn not only the underlying science but also the fundamental technological building blocks of semantic computing Moreover they ll discover a variety of cross disciplinary solutions to current computing and communication problems Throughout the book references to the primary literature enable further investigation of each individual topic Semantic Computing is ideal for industrial managers researchers and engineers seeking to design the next generation of computing systems in order to better meet user needs It is also recommended as a textbook for senior undergraduate and graduate level semantic computing courses

Logical Modeling of Biological Systems Luis Fariñas del Cerro, Katsumi Inoue, 2014-08-08 Systems Biology is the systematic study of the interactions between the components of a biological system and studies how these interactions give rise to the function and behavior of the living system Through this a life process is to be understood as a whole system rather than the collection of the parts considered separately Systems Biology is therefore

more than just an emerging field it represents a new way of thinking about biology with a dramatic impact on the way that research is performed The logical approach provides an intuitive method to provide explanations based on an expressive relational language This book covers various aspects of logical modeling of biological systems bringing together 10 recent logic based approaches to Systems Biology by leading scientists The chapters cover the biological fields of gene regulatory networks signaling networks metabolic pathways molecular interaction and network dynamics and show logical methods for these domains based on propositional and first order logic logic programming answer set programming temporal logic Boolean networks Petri nets process hitting and abductive and inductive logic programming It provides an excellent guide for all scientists biologists bioinformaticians and engineers who are interested in logic based modeling of biological systems and the authors hope that new scientists will be encouraged to join this exciting scientific endeavor
