Handbook of Logic in Artificial Intelligence and Logic Programming: Volume 5: Logic Programming Dov M. Gabbay, C. J. Hogger, J. A. Robinson, 1998-01-08 The Handbook of Logic in Artificial Intelligence and Logic Programming is a multi volume work covering all major areas of the application of logic to artificial intelligence and logic programming The authors are chosen on an international basis and are leaders in the fields covered Volume 5 is the last in this well regarded series Logic is now widely recognized as one of the foundational disciplines of computing It has found applications in virtually all aspects of the subject from software and hardware engineering to programming languages and artificial intelligence In response to the growing need for an in depth survey of these applications the Handbook of Logic in Artificial Intelligence and its companion the Handbook of Logic in Computer Science have been created The Handbooks are a combination of authoritative exposition

comprehensive survey and fundamental research exploring the underlying themes in the various areas Some mathematical background is assumed and much of the material will be of interest to logicians and mathematicians Volume 5 focuses particularly on logic programming The chapters which in many cases are of monograph length and scope emphasize possible unifying themes

Philosophical Logic and Artificial Intelligence Richmond H. Thomason, 2012-12-06 cians concerned with using logical tools in philosophy have been keenly aware of the limitations that arise from the original concentration of symbolic logic on the idiom of mathematics and many of them have worked to create extensions of the received logical theories that would make them more generally applicable in philosophy Carnap's Testability and Meaning published in 1936 and 1937 was a good early example of this sort of research motivated by the inadequacy of first order formalizations of dis This sugar cube is soluble in water positional sentences like And in fact there is a continuous history of work on this topic extending from Carnap's paper to Shoham's contribution to the present volume Much of the work in philosophical logic and much of what has appeared in The Journal of Philosophical Logic was motivated by similar considerations work in modal logic including tense deontic and epistemic logic intensional logics non declaratives presuppositions and many other topics In this sort of research since the main point is to devise new formalisms the technical development tends to be rather shallow in comparison with mathematical logic though it is seldom absent theorems need to be proved in order to justify the formalisms and sometimes these are nontrivial On the other hand much effort has to go into motivating a logical innovation

Logics in AI Jan van Eijck, 1991-02-26 The European Workshop on Logics in Artificial Intelligence was held at the Centre for Mathematics and Computer Science in Amsterdam September 10 14 1990 This volume includes the 29 papers selected and presented at the workshop together with 7 invited papers The main themes are Logic programming and automated theorem proving Computational semantics for natural language Applications of non
