## **Labor In Action:**

Labor in Action Adrian A. Paradis, 1975      *Transforming Organizations* Thomas A. Kochan, Michael Useem, 1992 This book examines how organizations can and should transform their practices to compete in a world economy. Research results from a multi-disciplinary team of MIT researchers along with the experiences and insights of a select group of industry practitioners are integrated into a model that stresses the need for systemic and transformative rather than piecemeal or incremental changes in organization practices and public policy. This integration of research and experience results in an argument for a new organizational learning model, one capable of gaining advantage from employee diversity, cooperation across organizational boundaries, strategic restructuring, and advanced technology. The book begins with a foreword by Lester C. Thurow.

**Speaking Code** Geoff Cox, Alex McLean, 2012-11-09 The aesthetic and political implications of working with code as procedure, expression, and action. *Speaking Code* begins by invoking the Hello World convention used by programmers when learning a new language, helping to establish the interplay of text and code that runs through the book. Interweaving the voice of critical writing from the humanities with the tradition of computing and software development, *Speaking Code*. Geoff Cox formulates an argument that aims to undermine the distinctions between criticism and practice and to emphasize the aesthetic and political implications of software studies. Not reducible to its functional aspects, program code mirrors the instability inherent in the relationship of speech to language; it is only interpretable in the context of its distribution and network of operations. Code is understood as both script and performance. Cox argues and is in this sense like spoken language, always ready for action. *Speaking Code* examines the expressive and performative aspects of programming alternatives to mainstream development, from performances of the live coding scene to the organizational forms of peer production, the democratic promise of social media, and their actual role in suppressing political expression and the market's emptying out of possibilities for free expression in the public realm. Cox defends language against its invasion by economics, arguing that speech continues to underscore the human condition, however paradoxical this may seem in an era of pervasive computing.

**The American**, 1897      Our Journal, 1920      **The Railway Clerk**, 1908      *Third Camp Socialism*, 2025-04-17 *Third Camp Socialism* collects Phyllis and Julius Jacobson's major writings on civil rights, Stalinism, the Cold War, and the New York Intellectuals. It makes a powerful case for revisiting the Jacobsons' contributions to socialist thought. The Jacobsons advanced a militant, small-d democratic perspective on the landmark events of their era, from the New Deal and World War II to sixties protests and the War on Terror. Today they are best remembered for founding *New Politics* and defending a third camp perspective that resists capitalism as well as all varieties of progressive authoritarianism.
