Kevin T. Kelly, 1996-01-04 This illustrated work searches for the answers to such questions as whether standard methodological recommendations help or hinder the reliability of inquiry It uses techniques and concepts drawn from formal learning theory topology and the theory of computability **Philosophical Perspectives on Land Reform in Southern**

Africa Erasmus Masitera, 2020-11-27 This edited collection explores a variety of philosophical perspectives on land reform in Southern Africa Presenting an innovative focus on the philosophical themes in land reform the contributors reflect on traditional African conceptualisations of the land as well as Western interpretations introducing specifically Southern African approaches to a wide range of debates Rooted in questions of colonization and decolonization the chapters examine what reform ought to do for the people of Africa providing contemporary reflections on the different racial and cultural facets of the land Notably ideas of reconciliation compensation justice development emancipation Ubuntu and empowerment are explored Vigorous and interdisciplinary in their approach the fifteen original chapters tackle a range of questions such as What does land mean in Africa What ethical considerations are relevant Which mechanisms should be used in addressing injustice regarding land reform and redistribution Providing a comprehensive engagement with philosophical and political issues of land reform in Southern Africa this volume is an invaluable resource to scholars not only in Africa but wherever similar questions of land dispossession and justice arise **Philosophy of Statistics**, 2011-05-31 Statisticians and

philosophers of science have many common interests but restricted communication with each other This volume aims to remedy these shortcomings It provides state of the art research in the area of philosophy of statistics by encouraging numerous experts to communicate with one another without feeling restricted by their disciplines or thinking piecemeal in their treatment of issues A second goal of this book is to present work in the field without bias toward any particular statistical paradigm Broadly speaking the essays in this Handbook are concerned with problems of induction statistics and probability For centuries foundational problems like induction have been among philosophers favorite topics recently however non philosophers have increasingly taken a keen interest in these issues This volume accordingly contains papers by both philosophers and non philosophers including scholars from nine academic disciplines Provides a bridge between philosophy and current scientific findings Covers theory and applications Encourages multi disciplinary dialogue **A Logical Introduction to Probability and Induction** Franz Huber, 2019 A Logical Introduction to Probability and Induction is a textbook on the mathematics of the probability calculus and its applications in philosophy On the mathematical side the textbook introduces these parts of logic and set theory that are needed for a precise formulation of the probability calculus

On the philosophical side the main focus is on the problem of induction and its reception in epistemology and the philosophy of science Particular emphasis is placed on the means end approach to the justification of inductive inference rules In addition the book discusses the major interpretations of probability These are philosophical accounts of the nature of probability that interpret the mathematical structure of the probability calculus Besides the classical and logical interpretation they include the interpretation of probability as chance degree of belief and relative frequency The Bayesian interpretation of probability as degree of belief locates probability in a subject's mind It raises the question why her degrees of belief ought to obey the probability calculus In contrast to this chance and relative frequency belong to the external world While chance is postulated by theory relative frequencies can be observed empirically

A Logical Introduction to Probability and Induction aims to equip students with the ability to successfully carry out arguments It begins with elementary deductive logic and uses it as basis for the material on probability and induction Throughout the textbook results are carefully proved using the inference rules introduced at the beginning and students are asked to solve problems in the form of 50 exercises An instructor's manual contains the solutions to these exercises as well as suggested exam questions The book does not presuppose any background in mathematics although sections 10.3-10.9 on statistics are technically sophisticated and optional The textbook is suitable for lower level undergraduate courses in philosophy and logic

Modeling and Using Context Varol Akman, Paolo Bouquet, Richmond Thomason, Roger A. Young, 2003-06-30 Context has emerged as a central concept in a variety of contemporary approaches to reasoning The conference at which the papers in this volume were presented was the third international interdisciplinary conference on the topic of context and was held in Dundee Scotland on July 27-30 2001 The first conference in this series was held in Rio de Janeiro in 1997 and the second in Trento in 1999 Like the previous conferences CONTEXT 2001 was remarkably successful in bringing together representatives of many different fields spanning the entire range of the cognitive and informational sciences and with interests ranging from specific commercial applications to highly general philosophical and logical theories The papers collected here demonstrate well the range of context related research While foundational problems remain and continue to be discussed in many of the contributions collected in this volume the work shows increased sophistication about what forms of reasoning are important and what techniques are appropriate in accounting for them The papers themselves however do not convey the lively excitement of the conference itself and the continuing spirit of cooperation and communication across disciplines that has been the hallmark of these conferences We are very pleased that the field of context research has shown over four years intense sustained development while retaining this sense of interdisciplinary cooperation

New Essays on the Knowability Paradox Joe Salerno, 2009-06-04 The knowability paradox suggests that wherever there is empirical ignorance there is also logically unknowable truth This volume presents the original papers in which this notorious problem was first set out nineteen new papers seeking to resolve it and a helpful introduction It will be the definitive resource for study of the paradox

Handbook of Epistemology I. Niiniluoto, Matti Sintonen, Jan Wolenski, 2004-03-31 Epistemology or theory of knowledge has always been one of the most important if not the most important field of philosophy New arguments are constantly brought to bear on old views new variants are marshalled to revive ancient stands new concepts and distinctions increase the sophistication of epistemological theories There are a great many excellent textbooks monographs as well as anthologies consisting of articles in epistemology Similarly there are useful philosophical dictionaries which contain a great number of relatively short entries and general philosophical handbooks which also touch epistemological issues This volume of 27 essays grew out from the interest to see a handbook which is devoted entirely to the historical roots and systematic development of theory of knowledge It is not intended to compete but to supplement the already existing literature It aims at giving both beginners and more advanced students as well as professionals in epistemology and other areas of philosophy an overview of the central problems and solutions of epistemology The essays are self contained and still often rather extensive discussions of the chosen aspects of knowledge The contributions presuppose very little familiarity with previous literature and only a few of them require the mastery of even elementary logical notation This we hope makes the volume also accessible to the philosophically interested wider audience The contributors were asked to provide substantial up to date self contained and balanced surveys of the various subareas and more specific topics of epistemology with reference to literature

Abductive Reasoning Atocha Aliseda, 2006-02-16 Abductive Reasoning Logical Investigations into Discovery and Explanation is a much awaited original contribution to the study of abductive reasoning providing logical foundations and a rich sample of pertinent applications Divided into three parts on the conceptual framework the logical foundations and the applications this monograph takes the reader for a comprehensive and erudite tour through the taxonomy of abductive reasoning via the logical workings of abductive inference ending with applications pertinent to scientific explanation empirical progress pragmatism and belief revision

Scientific Evidence Peter Achinstein, 2005-06 Physicists think they have discovered the top quark Biologists believe in evolution But what precisely constitutes evidence for such claims and why Scientists often disagree with one another over whether or to what extent some evidence counts in favor of a theory because they are operating with different concepts of scientific evidence These concepts need to be critically explored Peter Achinstein has gathered some prominent philosophers and historians of science for critical and lively discussions of both general questions about the meaning of evidence and specific ones about evidence for particular scientific theories

The Provenance of Pure Reason William W. Tait, 2005 Publisher description

After Popper, Kuhn and Feyerabend R. Nola, H. Sankey, 2012-12-06 Some think that issues to do with scientific method are last century's stale debate Popper was an advocate of methodology but Kuhn Feyerabend and others are alleged to have brought the debate about its status to an end The papers in this volume show that issues in methodology are still very much alive Some of the papers reinvestigate issues in the debate over methodology while others set out new ways in which the debate has developed in the last decade The book will be of interest to philosophers and scientists alike in the reassessment it provides of earlier debates about method and current directions of research

Doing Mathematics Martin H. Krieger, 2003 This book discusses some ways of doing mathematical work and the subject matter that is being worked upon and created It argues that the conventions we adopt the subject areas we delimit what we can prove and calculate about the physical world and the analogies that work for mathematicians all depend on mathematics what will work out and what won't And the mathematics as it is done is shaped and supported or not by convention subject matter calculation and analogy The causes studied include the central limit theorem of statistics the sound of the shape of a drum the connection between algebra and topology the stability of matter the Ising model and the Langlands Program in number theory and representation theory Contents Convention How Means and Variances are Entrenched as Statistics

Observation and Experiment in the Natural and Social Sciences Maria Carla Galavotti, 2006-04-18 According to a long tradition in philosophy of science a clear cut distinction can be traced between a context of discovery and a context of justification This tradition dates back to the birth of the discipline in connection with the Circles of Vienna and Berlin in the twenties and thirties of last century Convinced that only the context of justification is pertinent to philosophy of science logical empiricists identified its goal with the rational reconstruction of scientific knowledge taken as the clarification of the logical structure of science through an analysis of its language and methods Stressing justification as the proper field of application of philosophy of science logical empiricists intended to leave discovery out of its remit The context of discovery was then discarded from philosophy of science and left to sociology psychology and history The distinction between context of discovery and context of justification goes hand in hand with the tenet that the theoretical side of science can and should be kept separate from its observational and experimental components Further the final abstract formulation of theories should be analysed apart from the process behind it resulting from a tangle of context dependent factors This conviction is reflected by the distinction between theoretical and observational sentences underpinning the Hempelian view of theories as nets whose knots represent theoretical terms floating on the plane of observation to which it is anchored by rules of interpretation *The Mathematics of Language* Makoto Kanazawa, Marcus Kracht, Hiroyuki Seki, András Kornai, 2011-10-01 This book constitutes the proceedings of the 12th Biennial Meeting on Mathematics in Language MOL 12 held in Nara Japan in September 2011 Presented in this volume are 12 carefully selected papers as well as the paper of the invited speaker Andreas Maletti The papers cover such diverse topics as formal languages string and tree transducers grammar independent syntactic structures probabilistic and weighted context free grammars formalization of minimalist syntax parsing and unification lexical and compositional semantics statistical language models and theories of truth **The Laws of Belief** Wolfgang Spohn, 2012-03-29 Wolfgang Spohn presents the first full account of the dynamic laws of belief by means of ranking theory This book is his long awaited presentation of ranking theory and its ramifications He motivates and introduces the basic notion of a ranking function which recognises degrees of belief and at the same time accounts for belief simpliciter He provides a measurement theory for ranking functions accounts for auto epistemology in ranking theoretic terms and explicates the basic notion of a deductive or non deductive reason The rich philosophical applications of Spohn's theory include a new account of lawlikeness an account of ceteris paribus laws a new perspective on dispositions a rich and detailed theory of deterministic causation an understanding of natural modalities as an objectification of epistemic modalities an

account of the experiential basis of belief and thus a restructuring of the debate on foundationalism and coherentism and externalism and contextualism and finally a revival of fundamental a priori principles of reason fathoming the basics of empiricism and the relation between reason and truth and concluding in a proof of a weak principle of causality All this is accompanied by thorough comparative discussions on a general level as well as within each topic and in particular with respect to probability theory *Degrees of Belief* Franz Huber, Christoph Schmidt-Petri, 2008-12-21 This anthology is the first book to give a balanced overview of the competing theories of degrees of belief It also explicitly relates these debates to more traditional concerns of the philosophy of language and mind and epistemic logic
