Learner-Centered Design of Computing Education Mark Guzdial, 2022-05-31 Computing education is in enormous demand Many students both children and adult are realizing that they will need programming in the future This book presents the argument that they are not all going to use programming in the same way and for the same purposes What do we mean when we talk about teaching everyone to program When we target a broad audience should we have the same goals as computer science education for professional software developers How do we design computing education that works for everyone This book proposes use of a learner centered design approach to create computing education for a broad audience It considers several reasons for teaching computing to everyone and how the different reasons lead to different choices about learning goals and teaching methods The book reviews the history of the idea that programming isn't just for the professional software developer It uses research studies on teaching computing in liberal arts programs to graphic designers to high school teachers in order to explore the idea that computer science for everyone requires us to re think how we teach and what we teach The conclusion describes how we might create computing education for everyone

Logo Recognition Jingying Chen, Lizhe Wang, Dan Chen, 2011-08-12 Used by companies organizations and even individuals to promote recognition of their brand logos can also act as a valuable means of identifying the source of a document E business applications can retrieve and catalog products according to their logos Governmental agencies can easily inspect goods using smart mobile devices that use logo recognition techniques However

because logos are two dimensional shapes of varying complexity the recognition process can be challenging Although promising results have been found for clean logos they have not been as robust for noisy logos Logo Recognition Theory and Practice is the first book to focus on logo recognition especially under noisy conditions Beginning with an introduction to fundamental concepts and methods in pattern and shape recognition it surveys advances in logo recognition The authors also propose a new logo recognition system that can be used under adverse conditions such as broken lines added noise and occlusion The proposed system introduces a novel polygonal approximation a robust indexing scheme and a new line segment Hausdorff distance LHD matching method that can handle more distortion and transformation types than previous techniques In the first stage raw logos are transformed into normalized line segment maps In the second stage effective line pattern features are used to index the database to generate a moderate number of likely models In the third stage an improved LHD measure screens and generates the best matches A comprehensive overview of logo recognition the book also presents successful applications of the technology and suggests directions for future research
