

The infographic features a central illustration of a multi-story building with a grey facade and white window frames. A blue water line with yellow circular nodes at various points connects the building to the surrounding landscape. The landscape includes green trees, a grassy area with people, a decorative fountain, and a hot tub. The background is a light blue sky. Six purple circular callouts with teal borders are connected to the water line nodes. Each callout contains an icon in a teal teardrop shape, a title, and a description. The nodes are located at: the top of the building (Cooling Tower), a middle floor (Unoccupied Floor), the bottom of the building (Municipal Water Supply), a showerhead (Shower), a hot tub (Hot Tub), and a decorative fountain (Decorative Fountain).

Cooling Tower

When disinfectant levels are low, cooling tower fans can spray contaminated water droplets.

Shower

Legionella can grow in and spread through showerheads if a building's water has low disinfectant levels.

Unoccupied Floor

Low occupancy decreases water flow and disinfectant levels, increasing risk of *Legionella* growth.

Hot Tub

If hot tubs are not well maintained, the warm temperature supports growth of *Legionella*, which can spread through water jets.

Decorative Fountain

Legionella can grow in warm areas of a fountain and splashing can spread this contaminated water.

Municipal Water Supply

Events that interrupt the delivery of municipal water to a building, such as nearby construction, allow dirt to enter the system and use up disinfectant.
