Racial Science and Human Diversity in Colonial Indonesia Fenneke Sysling, 2016-07-15 Indonesia is home to diverse peoples who differ from one another in terms of physical appearance as well as social and cultural practices The way such matters are understood is partly rooted in ideas developed by racial scientists working in the Netherlands Indies beginning in the late nineteenth century who tried to develop systematic ways to define and identify distinctive races Their work helped spread the idea that race had a scientific basis in anthropometry and craniology and was central to people's identity but their encounters in the archipelago also challenged their ideas about race In this new monograph Fenneke Sysling draws on published works and private papers to describe the way Dutch racial scientists tried to make sense of the human diversity in the Indonesian archipelago The making of racial knowledge it contends cannot be explained solely in terms of internal European intellectual developments It was on the ground that ideas about race were made and unmade with a set of knowledge strategies that did not always combine well Sysling describes how skulls were assembled through the colonial infrastructure how measuring sessions were resisted what role photography and plaster casting played in racial science and shows how these aspects of science in practice were entangled with the Dutch colonial Empire
