Handbook of Spin Transport and Magnetism Evgeny Y. Tsymbal, Igor Zutic, 2016-04-19 In the past several decades the research on spin transport and magnetism has led to remarkable scientific and technological breakthroughs including Albert Fert and Peter Grunberg's Nobel Prize winning discovery of giant magnetoresistance GMR in magnetic metallic multilayers. *Handbook of Spin Transport and Magnetism* provides a comprehensive balance of theory and experiment. **Constitutive Models for Rubber IV** Per-Erik Austrell, 2017-12-04 The unique properties of elastomeric materials offer numerous advantages in many engineering applications. Elastomeric units are used as couplings or mountings between rigid components for example in shock absorbers, vibration insulators, flexible joints, seals and suspensions etc. However, the complicated nature of the behaviour of such material makes it difficult to accurately predict the performance of these units using finite element modelling for example. It is imperative that constitutive models accurately capture relevant aspects of mechanical behaviour. The latest developments concerning constitutive modelling of rubber is collected in these Proceedings. Topics included in this volume are: Hyperelastic models, Strength, fracture, fatigue, Dynamic properties, the Fletcher-Gent effect, Micro-mechanical statistical approaches, Stress softening, iscoelasticity, Filler reinforcement and Tyres, fibre cord reinforced rubber. [Handbook of Dynamic Data Driven Applications Systems](#) Erik Blasch, Sai Ravela, Alex Aved, 2018-11-13 The *Handbook of Dynamic Data Driven Applications Systems* establishes an authoritative reference of DDDAS pioneered by Dr Darema and the co-authors for researchers and practitioners developing DDDAS technologies. Beginning with general concepts and history of the paradigm, the text provides 32 chapters by leading experts in 10 application areas to enable an accurate understanding, analysis and control of complex systems, be they naturally engineered or societal. Earth and Space Data Assimilation, Aircraft Systems Processing, Structures Health Monitoring, Biological Data Assessment, Object and Activity Tracking, Embedded Control and Coordination, Energy Aware Optimization, Image and Video Computing, Security and Policy Coding, Systems Design. The authors explain how DDDAS unifies the computational and instrumentation aspects of an application system, extends the notion of Smart Computing to span from the high end to the real time data acquisition and control, and manages Big Data exploitation with high dimensional model coordination. **Handbook of Numerical Simulation of In-Flight Icing** Wagdi George Habashi, 2023-12-11 This *Handbook of Numerical Simulation of In-Flight Icing* covers an array of methodologies and technologies on numerical simulation of in-flight icing and its applications. Comprised of contributions from internationally recognized experts from the Americas, Asia and the EU, this authoritative self-contained reference includes best practices and specification data spanning the gamut of simulation tools available internationally that can be used to speed up the certification of aircraft and make them safer to fly into known icing. The collection features nine sections concentrating on aircraft, rotorcraft, jet engines, UAVs, ice protection systems including hot air, electrothermal and others, sensors and probes, CFD in the aid of testing, flight simulators and certification process acceleration methods. Incorporating perspectives from
