Journal of the Royal Society of New Zealand ,1988-12 *Medieval Adaptation, Settlement and Economy of a Coastal Wetland* Luke Barber,Greg Priestley-Bell,2008-10-08 Romney Marsh is the largest coastal lowland on the south coast of England Since 1991 excavations in advance of gravel extraction around Lydd on Romney Marsh have uncovered large areas

of medieval landscape one of the largest to be exposed in southern England Features uncovered include 12th 13th century drainage ditches ditched field systems and sea defences Also of particular significance is the identification of a series of occupation sites and their enclosures The excavation of dispersed settlements is particularly difficult because of the scale of work required to produce meaningful results In this case it has been possible to work on sufficiently large areas to allow significant conclusions to be drawn The excavations at Lydd Quarry have shown how dispersed settlement existed alongside the nucleated market settlements on Romney Marsh This extensive report details the archaeological investigations of the field systems and occupation sites finds and environmental material There is also a section by Sheila Sweetinburgh on the documentary evidence Two final chapters set out broader conclusions from the evidence for the field systems settlements and economy and set the area in its wider context The research has provided an unprecedented opportunity to study reclamation occupation and economy of a large tract of marginal landscape through a considerable period of time

Pilot Study of Sediment Accretion Methods and Rates in Prairie Potholes William N. Pizzolato, Barbara A. Kleiss, Miriam L. Fearn, 1995

Air Pollution and Forests William H. Smith, 2012-12-06 This series is dedicated to serving the growing community of scholars and practitioners concerned with the principles and applications of environmental management Each volume will be a thorough treatment of a specific topic of importance for proper management practices A fundamental objective of these books is to help the reader discern and implement human s stewardship of our environment and the world s renewable resources For we must strive to understand the relationship between humankind and nature act to bring harmony to it and nurture an environment that is both stable and productive These objectives have often eluded us because the pursuit of other individual and societal goals has diverted us from a course of living in balance with the environment At times therefore the environmental manager may have to exert restrictive control which is usually best applied to humans not nature Attempts to alter or harness nature have often failed or backfired as exemplified by the results of imprudent use of herbicides fertilizers water and other agents Each book in this series will shed light on the fundamental and applied aspects of environmental management It is hoped that each will help solve a practical and serious environmental problem

A Handbook of Geoarchaeological Approaches to Settlement Sites and Landscapes Charles French, 2015-11-30 Geoarchaeology is a major branch of archaeological science at the interfaces between geology geography and archaeology involving the combined study of archaeological soil and geomorphological records and the recognition of how natural climatic and human induced processes alter landscapes The formation and modification of past soils and occupation sequences can be examined primarily through the use of soil micromorphological techniques and various physical and geo chemical techniques This short text aims to explain some of the basics of geoarchaeological approaches and research design used to tackle the investigation of landscapes and settlement archaeology and the application of soil micromorphology to archaeological situations The intention is to present a basic handbook of good practice with case studies and examples that any archaeologist or aspiring

geoarchaeologist can use *Fluvial-Tidal Sedimentology*, 2015-11-26 Fluvial Tidal Sedimentology provides information on the Tidal Fluvial Transition the transition zone between river and tidal environments and includes contributions that address some of the most fundamental research questions including how the morphology of the tidal fluvial transition zone evolves over short days and long decadal time periods and for different tidal and fluvial regimes the structure of the river flow as it varies in its magnitude over tidal currents and how this changes at the mixing interface between fresh and saline water and at the turbidity maximum the role of suspended sediment in controlling bathymetric change and bar growth and the role of fine grained sediment muds and flocs whether it is possible to differentiate between fluvial and tidally influenced bedforms as preserved in bars and within the adjacent floodplain and what are the diagnostic sedimentary facies of tidal fluvial deposits and how are these different from pure fluvial and tidal deposits amongst other topics The book presents the latest research on the processes and deposits of the tidal fluvial transition documenting recent major field programs that have quantified the flow sediment transport and bed morphology in tidal fluvial zones It uses description of contemporary environments and ancient outcrop analogues to characterize the facies change through the tidal fluvial transition Presents the latest outcomes from recent large integrated field programs in estuaries around the world Gives detailed field descriptions outcrop borehole core contemporary sediments of tidal fluvial deposits Accesses new models and validation datasets for estuarine processes and deposits Presents descriptions of contemporary environments and ancient outcrop analogues to characterize the facies change through the tidal fluvial transition *Reproductive Ecology of Flowering Plants: A Manual* K.R. Shivanna, Rajesh Tandon, 2014-09-01 Successful reproduction is the basis not only for the stability of the species in their natural habitat but also for productivity of our crop plants Therefore knowledge on reproductive ecology of wild and cultivated plants is important for effective management of our dwindling biodiversity and for the sustainability and improvement of the yield in crop species Conservation and management of our plant diversity is going to be a major challenge in the coming decades particularly in the tropical countries which are rich in biodiversity Reproductive failure is the main driver for pushing a large number of tropical species to vulnerable category Available data on reproductive ecology on tropical species is very limited and there is an urgent need to initiate research on these lines A major limitation for the beginners to take up research is the absence of simple concise work manuals that provide step wise procedures to study all aspects of reproductive ecology The Manual fills this void Over 60 protocols described in the manual cover the whole spectrum of reproductive ecology study sites and species phenology floral morphology and sexuality pollen and pistil biology pollination ecology breeding system seed biology seed dispersal and seedling recruitment Each chapter gives a concise conceptual account of the topic before describing the protocols The Manual caters to researchers teachers and students who are interested in any aspect of reproductive ecology of flowering plants botanists ecologists agri horticulturists foresters entomologists plant breeders and conservation biologists *Introduction to World Vegetation* P.E. Collinson, 2012-12-06 A textbook 1st ed 1978 presenting a

wide range of information for students of ecology geography and biogeography *Handbook of Plant Palaeoecology* R. T. J. Cappers, R. Neef, 2012-07-03 Plant palaeoecologists use data from plant fossils and plant subfossils to reconstruct ecosystems of the past This book deals with the study of subfossil plant material retrieved from archaeological excavations and cores dated to the Late Glacial and Holocene One of the main objectives of this book is to describe the processes that underlie the formation of the archaeobotanical archive and the ultimate composition of the archaeobotanical records being the data that are sampled and identified from this immense archive Our understanding of these processes benefits from a knowledge of plant ecology and traditional agricultural practices and food processing This handbook summarizes the basic ecological principles that relate to the reconstruction of former vegetations and of agricultural practices in particular We hope this book will help palaeobotanists environmental archaeologists and colleagues from related disciplines optimize inferences based on what we could term old style archaeobotany And we hope that our observations will serve as an eye opener and improve future research not only as it is practised in our laboratories but also as it is practised in the field *Paleoclimatology* Raymond S. Bradley, 2013-12-28 Paleoclimatology Reconstructing Climates of the Quaternary Third Edition winner of a 2015 Textbook Excellence Award Texty from The Text and Academic Authors Association provides a thorough overview of the methods of paleoclimatic reconstruction and of the historical changes in climate during the past three million years This thoroughly updated and revised edition systematically examines each type of proxy and elucidates the major attributes and the limitations of each Paleoclimatology Third Edition provides necessary context for those interested in understanding climate changes at present and how current trends in climate compare with changes that have occurred in the past The text is richly illustrated and includes an extensive bibliography for further research Winner of a 2015 Texty Award from the Text and Academic Authors Association A comprehensive overview of the methods of paleoclimate reconstruction and the record of past changes in climate during the last 3 million years Addresses all the techniques used in paleoclimatic reconstruction from climate proxies With full color throughout and thoroughly revised chapters on dating methods climate forcing ice cores marine sediments pollen analysis dendroclimatology and historical records Includes new chapters on speleothems loess and lake sediments More than 1 000 new references and 190 new figures Essential reading for those interested in how present trends in climate compare with changes that have occurred in the past Science-Based Dating in Archaeology M.J. Aitken, 2014-02-25 Archaeologists and archaeology students have long since needed an authoritative account of the techniques now available to them designed to be understood by non scientists This book fills the gap and it offers a two tier approach to the subject The main text is a coherent introduction to the whole field of science based dating written in plain language for non scientists Additional end notes however offer a more technical understanding and cater for those who have a scientific and mathematical background
