Angiogenesis: In Vivo Systems, Part A David A. Cheresh, 2009-02-12 Angiogenesis is the growth of new blood vessels and is an important natural process in the body A healthy body maintains a perfect balance of angiogenesis modulators In many serious disease states however the body loses control over angiogenesis Diseases that are angiogenesis dependent result when blood vessels either grow excessively or insufficiently Understanding how angiogenesis works and how to control it will have massive implications on the management treatments and ultimately the prevention of many common and not so common diseases Angiogenesis cuts across virtually every discipline The Angiogenesis Foundation identified angiogenesis as a common denominator in our most serious diseases Excessive angiogenesis occurs in diseases such as cancer diabetic blindness age related macular degeneration rheumatoid arthritis psoriasis and many other conditions Insufficient angiogenesis occurs in diseases such as coronary artery disease stroke and delayed wound healing Tried and tested techniques written by researchers that developed them used them and brought them to fruition Provides the builder s manual for essential techniques This is a one stop shop that eliminates needless searching among untested techniques Includes step by step methods for understanding the cell and molecular basis of wound healing vascular integrin signaling mechanical signaling in blood vessels and vascular proteomics
