Immunocytochemistry Practical Applications In Pathology And Biology:

Theory and Practice of Histological Techniques John D. Bancroft, 2008-01-01 This leading reference work on histological techniques is an essential and invaluable resource no matter what part you play in histological preparations and applications whether you are a student or a highly experienced laboratory professional

Immunocytochemistry Julia M. Polak, Susan Van Noorden, 2014-05-12 *Immunocytochemistry Practical Applications in Pathology and Biology* focuses on the processes principles methodologies and approaches involved in the applications of immunocytochemistry in pathology and biology The selection first takes a look at the development and scope of immunocytochemistry techniques and practice used in immunocytochemistry and raising and testing antibodies for immunocytochemistry The book then ponders on raising antibodies to small peptides use of semithin frozen sections in immunocytochemistry and colloidal gold probes in immunocytochemistry Discussions focus on the production of gold probes localization of mouse serum albumin in the mammary gland immunogens and the immune response production of antisera and antibody specificity in immunocytochemistry The publication takes a look at double immunoenzymatic labelling lectin histochemistry immunocytochemical localization of noradrenaline adrenaline and serotonin and immunocytochemistry of cell and tissue cultures Immunocytochemistry in endocrine pathology and indirect immunofluorescence in the study and diagnosis of organ specific autoimmune diseases are also discussed The selection is a dependable source of information for researchers interested in the practical applications of immunocytochemistry in pathology and biology

Immunocytochemical Methods and Protocols Lorette C. Javois, 2008-02-02 The principle that antibodies can be used as cytochemical agents provided they are tagged with suitable markers has been evident for over 50 years During this time the use of immunocytochemical methods has spread to a wide array of biological disciplines Early applications focused on the detection of microbial antigens in tissues while more recent applications have used monoclonal antibodies to study cell differentiation during embryonic development For a select few disciplines volumes have been published focusing on the specific application of immunocytochemical techniques to that discipline What distinguishes the present book *Immunocytochemical Methods and Protocols* from earlier books is its broad appeal to researchers in all disciplines including those in both research and clinical settings The methods and protocols presented here are designed to be general in their application and the accompanying Notes provide invaluable assistance in adapting or troubleshooting the protocols Interspersed throughout the book are chapters providing overviews of select topics related to immunocytochemistry

Practical Electron Microscopy Elaine Evelyn Hunter, Peter Maloney, Moïse Bendayan, 1993-09-24 For this new edition the chapters on photography and the electron microscope have been completely rewritten and two new chapters have been added on immunoelectron microscopy using colloidal gold and on useful specialized techniques

Practice and Theory of Enzyme Immunoassays P. Tijssen, 1985-08-01 Enzyme immunoassays

have developed into a powerful assay technology transcending several discipline boundaries extensively applied as a tool in fields other than enzymology and immunology This volume reflects the rapid progress in the applications of this technique providing a basic understanding of these techniques and a practical guideline for the choice and experimental detail

Theory and Strategy in Histochemistry Hans Lyon, 2012-12-06 If you want practical information on how to use this book please refer to Note to the Readers p VII Histochemistry and cytochemistry are essential tools in biomedical research and routine service laboratories Most texts on histochemistry fall into one of two categories 1 Encyclopaedic texts covering all or nearly all information available on the whole or selected parts of histochemistry 2 Reviews or surveys of methods found to be useful by the author s While the former category often appeals to the more philosophically inclined reader direct guidance on the selection of technique may be difficult to find In contrast the latter category are often excellent sources for details on how to perform a particular method with a reasonable chance of success Consideration of the exact mechanism of staining of possible reasons for failure and of alternative techniques are however frequently lacking This book is an introduction to the scientific basis of histochemistry and is intended to provide a background for the selection and development of appropriate methods It is not a cook book and readers expecting exhaustive methodological descriptions will be disappointed Although most of the contributors to this book would not describe themselves as histochemists they have all at some time found it essential to develop a basic understanding of histochemistry This book contains the information they would have greatly appreciated ready access to at that time

Application of Monoclonal Antibodies in Tumor Pathology Dirk J. Ruiter, G.J. Fleuren, S.O. Warnaar, 2012-12-06 The development of monoclonal antibodies to human tumor associated antigens has greatly facilitated the application of immunohistochemical techniques to analyze surgically removed tissues During the last few years this approach has been utilized by a progressively increasing number of investigators to analyze malignant cells Although monoclonal antibodies to tumor associated antigens have not become yet routine reagents in immunopathology they have provided new information which could not be obtained with conventional antisera or histochemical procedures The following are representative examples Tumor associated antigens have been identified which display a restricted distribution in normal tissues and therefore may represent useful markers for radio imaging and appropriate targets for immunotherapy In spite of undetectable differences with conventional histopathological approaches heterogeneity has been found in the antigenic profile of tumor cells within a lesion in autologous lesions removed from different anatomic sites from a given patient and in lesions removed from different patients Phenotypes of tumor cells have been identified which correlate with the biology of tumor cells and with the clinical course of the disease From a practical view point the use of monoclonal antibodies in immunopathology has enhanced interactions between pathologists and immunologists as exemplified by the present book Such interactions have contributed to the application of basic research to clinical problems The chapter of this book discusses investigations performed with monoclonal antibodies to antigens expressed by various types of normal and

malignant human cells *Cellular Pathology Technique* C. F. A. Culling, R. T. Allison, W. T. Barr, 2014-05-19 Cellular Pathology Technique aims to maintain the twin objectives of producing a comprehensive bench book and a text for students that will take the Special Examination in Cellular Pathology of the Institute of Medical Laboratory Sciences The organization of this fourth edition has been reshaped Some sections were expanded such as those about the theory of staining and new chapters were added dealing with immunolocalization the endocrine system and quantification This book is organized into 10 parts The introductory part provides basic information on cells and tissues and outlines the methodology in cellular pathology techniques This is followed by chapters that deal with various aspects of cellular pathology including tissues cells and cell products of special interests electron microscopy and immunocytochemistry This book will be of interest to students of cellular pathology and those in the medical profession *Molecular Methods in Plant Pathology* U. S. Singh, Rudra P. Singh, 2017-12-14 Molecular Methods in Plant Pathology covers methods in phytopathology at the molecular level including PCR techniques electron microscopy tissue culturing and the cloning of disease resistant genes Phytopathologists botanists horticulturists and anyone working in agriculture will find this a useful reference on biophysical biochemical biomolecular and biotechnological methods **Introduction to the Cellular and Molecular Biology of Cancer** Leonard Maurice Franks, Natalie M. Teich, 1997 This new edition maintains the objective of the previous editions of providing a relatively brief but comprehensive introduction to the initiation development and treatment of cancer Current techniques in cell and molecular biology have been widely applied to the study of cancer and the resulting new developments are introduced here In areas such as genetic and chromosome changes growth factors and the biology of human leukemia where there has been great activity the relevant chapters have been extensively rewritten but all the chapters have been reviewed and brought up to date *Modern Trends in Human Leukemia VI* Rolf Neth, Robert C. Gallo, Melvyn F. Greaves, Gritta Janka, 2012-12-06 Organized on behalf of the Deutsche Gesellschaft für Hämatologie und Onkologie Wilsede June 17 20 1984 Wilsede Joint Meeting on Pediatric Oncology III Hamburg June 21 22 1984 *Retroviruses in Human Lymphoma/leukemia* Masanao Miwa, 1985-12 In the Proceedings of this Symposium papers are presented from leading laboratories worldwide studying human and animal retroviruses and their associated leukemias and other diseases including AIDS The volume provides an up to date review of the field and indicates possible future developments for cancer research in which multidisciplinary work ranging from molecular biology to epidemiology plays an important role The book contains 31 papers which are grouped into the following subject areas lectures clinical aspects epidemiology virus transmission characterization of viruses infected cells AIDS *Ophthalmic Histopathology* W.R. Lee, 2013-04-17 This book has been written to give guidance to histopathologists who are dealing with pathological specimens submitted by ophthalmologists whether in a general pathology laboratory or in a specialist ophthalmic pathology laboratory The bias has been given to the diseases encountered commonly in the routine service or in the autopsy room and the intention is to show how to achieve the maximum information from each specimen

Conventional textbooks deal with diseases of the eye on an anatomical basis but this is inappropriate for a histopathologist who is studying a globe in which the disease has varying effects on each of the individual tissue components While unconventional it seemed more acceptable to lay the book out under the relatively limited and broad headings which ophthalmologists use as indications for enucleation trauma tumour endophthalmitis vascular disease etc It also seemed logical to include a separate chapter on ocular disease as it is encountered in the autopsy room and continuing the theme to consider a keratoplasty specimen and the topics of orbital biopsy and conjunctival biopsy in separate chapters In each pathological process whenever appropriate it was important to include the effects of modern therapeutic measures because this is one of the main features of interest for the clinician For the beginner an introductory chapter on the techniques and rationale of the preliminary systematic macroscopic examination of a globe has been included with an account of the supplementary techniques which are essential for an accurate diagnosis

In Vitro Methods in Toxicology C. K.

Atterwill, C. E. Steele, 1987-10-22 The volume brings together the once disparate knowledge of cultural techniques and thus provides an important reference work for industrial and academic toxicologists

Regulation of Hepatic Metabolism K.

Jungermann, F.C. Kauffman, R.G. Thurman, 2012-12-06 The liver is an exceptionally complex and diverse organ that functions both as an exocrine and an endocrine gland It secretes bile which contains many constituents in addition to bile salts and it synthesizes and releases many substances in response to the body's demands including prohormones albumin clotting factors glucose fatty acids and various lipoproteins It has a dual blood supply providing a rich mixture of nutrients and other absorbed substances via the portal vein and oxygen rich blood via the hepatic artery This functional heterogeneity is accompanied by cellular heterogeneity The liver contains many cell types including hepatic parenchymal cells Kiipffer cells Ito cells and endothelial cells The most abundant cell type the parenchymal cells are biochemically and structurally heterogeneous The cells in the oxygen rich areas of the portal triad appear more dependent on oxidative metabolism whereas those around the central vein pericentral perivenous or centrolobular areas are more dependent upon an anaerobic mechanism Throughout this volume the latter three terms are used synonymously by various authors to indicate the five to eight layers of cells radiating from the central vein Structural and metabolic heterogeneity of hepatic parenchymal cells has been demonstrated by a variety of approaches including histochemical ultra structural and ultramicrobiochemical studies This microheterogeneity is linked to the physiological functions of the liver and its response to injurious substances

Endocrinology I. Chester-Jones, P.M. Ingleton, J.G. Phillips, 2013-12-14 Endocrinology as a discipline was a late arrival in the corpus of established subjects Its growth in recent years has been prodigious extending from morphology to molecular levels Most of the major endocrine glands were noted by the early anatomists although the adrenal glands were not described until 1563 by Bartholomaeus Eustachius 1520 1574 On the other hand elucidation of the function of these glands was extremely

slow Key work by A A Berthold 1849 although overlooked at the time showed that comb atrophy in castrated fowl was prevented by testis transplantation The idea that glands produced substances reaching the bloodstream directly and not via excretory ducts stemmed from Claude Bernard who first used the term internal secretion in 1855 The clinical observations of Thomas Addison at Guy's Hospital published as a monograph in 1855 entitled The Constitutional and Local Effects of Disease of the Suprarenal Capsules were seminal However the stimulus of this early research did not bring immediate widespread further investigations Upon the discovery of secretin in 1902 Bayliss and Starling considered the term internal secretion to be clumsy and the term hormone was coined from OQ UW 1 excite or arouse and it was first used by Starling in his Croonian of 1905
