*The Nature of Empire* Andrea Duffy, 2025-09-15 The Nature of Empire exposes the central role of modern imperialism in the development of contemporary environmentalism and environmental science It builds this case through an investigation of five major modern empires Britain France Russia the Ottoman Empire and Japan This book offers readers a global environmental history of modern imperialism that actively engages Western based and non Western based empires As this study shows imperialism ultimately transformed human perceptions of nature and the environment in significant lasting and conflicting ways It both inspired modern conservationist practices and fueled opposition to environmental policies in colonial contexts It also spurred the development of climate science which helped reveal the environmental toll of imperial exploitation and drive efforts to fight it The environmental and political legacies of empire remain evident today through unmitigated anthropogenic climate change and the increasing incidence of extreme weather which tends to disproportionately impact marginalized peoples This book stands as a useful and accessible resource for students scholars and all those seeking to better understand environmental history imperial legacies and the roots of contemporary climate challenges

ways of being and seeing their experiences and knowledge and their relationships with each other continue to be ignored discounted written over and destroyed by anthropocentric practices and endeavours Within the vestiges of colonialism this silence and occlusion co opts and consumes animals physically and culturally into the servitude of human interests and selective narratives of history and progress Decolonising Animals brings together critical interrogations case studies and creative explorations that identify and examine how non human animals are affected by and respond to colonial structures and processes This collection includes the perspectives of Indigenous and non Indigenous scholars artists and activists

detailing the ways in which they question colonial ways of knowing engaging with and representing animals. Importantly the book offers suggestions for how we might decolonise our relationships with non human animals and with each other. *The Common Worlds of Children and Animals* Affrica Taylor, Veronica Pacini-Ketchabaw, 2018-10-08 The lives and futures of children and animals are linked to environmental challenges associated with the Anthropocene and the acceleration of human caused extinctions. This book sparks a fascinating interdisciplinary conversation about child animal relations calling for a radical shift in how we understand our relationship with other animals and our place in the world. It addresses issues of interspecies and intergenerational environmental justice through examining the entanglement of children's and animals' lives and common worlds. It explores everyday encounters and unfolding relations between children and urban wildlife. Inspired by feminist environmental philosophies and indigenous cosmologies the book poses a new relational ethics based upon the small achievements of child animal interactions. It also provides an analysis of animal narratives in children's popular culture. It traces the geo historical trajectories and convergences of these narratives and of the lives of children and animals in settler colonised lands. This innovative book brings together the fields of more than human geography childhood studies multispecies studies and the environmental humanities. It will be of interest to students and scholars who are reconsidering the ethics of child animal relations from a fresh perspective. *Darwinism, War and History* David Paul Crook, 1994-03-17 An exciting reinterpretation of Social Darwinism questioning conventional assumptions and proffering an alternative reading of a discourse of peace biology. **Animals and Women** Carol J. Adams, Josephine Donovan, 1995-11-14 *Animals and Women* is a collection of pioneering essays that explores the theoretical connections between feminism and animal defense. Offering a feminist perspective on the status of animals this unique volume argues persuasively that both the social construction and oppressions of women are inextricably connected to the ways in which we comprehend and abuse other species. Furthermore it demonstrates that such a focus does not distract from the struggle for women's rights but rather contributes to it. This wide ranging multidisciplinary anthology presents original material from scholars in a variety of fields as well as a rare early article by Virginia Woolf. Exploring the leading edge of the species gender boundary it addresses such issues as the relationship between abortion rights and animal rights the connection between woman battering and animal abuse and the speciesist basis for much sexist language. Also considered are the ways in which animals have been regarded by science literature and the environmentalist movement. A striking meditation on women and wolves is presented as is an examination of sexual harassment and the taxonomy of hunters and hunting. Finally this compelling collection suggests that the subordination and degradation of women is a prototype for other forms of abuse and that to deny this connection is to participate in the continued mistreatment of animals and women. **Popular Mechanics**, 1933-11 *Popular Mechanics* inspires instructs and influences readers to help them master the modern world.
