Immune Recognition In Focus:

Structural Glycobiology Elizabeth Yuriev, Paul A. Ramsland, 2012-09-27 Structural Glycobiology covers the experimental theoretical and alternative technologies used in the study of the structural basis for the diverse biological roles of carbohydrates The book overviews the application of specialized technologies to the study of carbohydrates in biology reviews relevant and current research in the field and is illustrated throughout by specific examples of how research investigations have yielded key structural and associated biological data on carbohydrates and glycolipids In particular the book focuses on X ray crystallography and small angle scattering NMR and cryo electron microscopy techniques Theoretical modeling based approaches such as molecular mechanics molecular dynamics free energy calculations and carbohydrate docking Alternative techniques for yielding structural information on carbohydrates from complex biological samples Carbohydrates in medicine specifically in areas that have been directly impacted by our understanding of the structural role of carbohydrates in immune recognition cancer organ transplantation and infection **Nanomedicine** Kenneth A. Howard, Thomas Vorup-Jensen, Dan Peer, 2016-05-27 This title is a comprehensive text that addresses key aspects of nanomedicine such as properties occurring at the nanoscale that have unique medical effects great molecular knowledge of the human body and disease processes and apparent clinical translation as opposed to narrow insufficient texts that address only a few topics and attempt to rebrand established drug delivery It will clearly define the field which is needed due to the immaturity and broad nature of the field The book is aligned with both the USA and European roadmaps for nanomedicine and will address initiatives taken in Asia that ensures timely and relevant content In depth chapters ensure each section is adequately covered The nanopharmaceutical section focuses on novel drug delivery systems relevant to nanomedicine and the book has an extensive section on immune recognition at the nanoscale which has implications for in vivo applications of nanomedicines **Advances in Immunology** , 1999-12-06 Advances in Immunology presents current developments as well as comprehensive reviews in immunology Articles address the wide range of topics that comprise immunology including molecular and cellular activation mechanisms phylogeny and molecular evolution and clinical modalities Edited and authored by the foremost scientists in the field each volume provides up to date information and directions for future research

Immunopathology in Toxicology and Drug Development George A. Parker, 2017-03-28 This book provides a fundamental understanding of immunopathology and immunopathologic processes with particular attention to nonclinical toxicology studies Chapters provide an overview of general immunobiology cells of the immune system signaling and effector molecules and immunopathology assays A companion volume Immunopathology in Toxicology and Drug Development Volume 2 Organ Systems offers summaries of organ specific immunobiology and immunopathology as well as common responses to xenobiotics These informative and strategic books were created in response to the large segment of drug development that focuses on chronic diseases many of which involve alterations to the immune system Therapies that target these diseases

commonly involve some form of immunomodulation As a result the two volumes of Immunopathology in Toxicology and Drug Development are critical texts for individuals involved in diverse aspects of drug development Readers will acquire a thorough understanding of immunopathology for detection and accurate interpretation of pathologic effects of xenobiotics on the immune system Proceedings of the First Workshop on Biological Physics 2000 Virulh Sa-yakanit,Hans Frauenfelder,Stig Lundqvist,2001 This book is devoted to the broad subject of flavor physics embracing the question of what distinguishes one type of elementary particles from another The articles range from the forefront of formal theory treating the physics of extra dimensions to details of particle detectors Although special emphasis is placed on the physics of kaons charmed and beauty particles top quarks and neutrinos the articles also dealing with electroweak physics quantum chromodynamics supersymmetry and dynamical electroweak symmetry breaking Violations of fundamental symmetries such as time reversal invariance are discussed in the context of neutral kaons beauty particles electric dipole moments and parity violation in atoms The physics of the Cabibbo Kobayashi Maskawa matrix and of quark masses are described in some detail both from the standpoint of present and future experimental knowledge and from a more fundamental viewpoint where physicists are still searching for the correct theory Developments Of Artificial Intelligence Technologies In Computation And Robotics - Proceedings Of The 14th International Flins Conference (Flins 2020) Zhong Li,Chunrong Yuan,Jie Lu,Etienne E Kerre,2020-08-04 FLINS an acronym introduced in 1994 and originally for Fuzzy Logic and Intelligent Technologies in Nuclear Science is now extended into a well established international research forum to advance the foundations and applications of computational intelligence for applied research in general and for complex engineering and decision support systems The principal mission of FLINS is bridging the gap between machine intelligence and real complex systems via joint research between universities and international research institutions encouraging interdisciplinary research and bringing multidiscipline researchers together FLINS 2020 is the fourteenth in a series of conferences on computational intelligence systems **Biological Physics 2000, Proceedings Of The First Workshop** Hans Frauenfelder,Leif Matsson,Virulh Sa-yakanit,2001-09-20 Like inanimate matter biological matter is condensed though it may be more complex However a living cell is a chemically open system with biological functions that are often a nonstationary nonlinear type of collective phenomena driven by chemical reactants e g ATP GTP ligands and receptors The living cell and many of its subsystems are hence lyotropic systems depending on various reactant concentrations rather than the temperature Nonlocal and local correlations of the interacting molecules become the prerequisites for signal transduction This book constitutes the proceedings of the workshop entitled Biological Physics 2000 *The Fungal Cell Wall* Jean-Paul Latgé,2020-08-12 This book illustrates that the fungal cell wall is critical for the biology and ecology of all fungi and especially for human fungal pathogens Readers will learn that the composition of the fungal cell wall is a unique structure which cannot be found in the human host Consequently the chapters outline how the immune systems of both animals and humans have evolved to

recognize conserved and unique elements of the fungal cell wall As an application example the authors also show that the three dimensional structures of the cell wall are excellent targets for the development of antifungal agents and chemotherapeutic strategies With the combination of biological findings and medical outlooks this volume is a fascinating read for scientists clinicians and biomedical students Epstein Barr Virus Volume 2 Christian Münz,2015-10-01 Epstein Barr virus EBV was discovered as the first human tumor virus around 50 years ago Since its discovery in Burkitt s lymphoma it has been associated with various other malignancies infectious mononucleosis and even autoimmune diseases The two book volumes on EBV summarize the first 50 years of research on this tumor virus starting with historical perspectives on discovery oncogenicity and immune control reviewing the role that the virus plays in the various associated diseases and concluding with a discussion on how the immune system keeps persistent EBV infection under control in healthy EBV carriers and can be used to treat EBV associated diseases The respective 32 chapters are written by international experts from three continents for health care providers biomedical researchers and patients that are affected by EBV The assembled knowledge should help to understand EBV associated diseases better and to develop EBV specific vaccination in the near future Annual Research Directory National Cancer Institute (U.S.).
