Immunologic Approaches To The Classification And Management Of Lymphomas And Leukemias:

Immunologic Approaches to the Classification and Management of Lymphomas and Leukemias John M. Bennett, Kenneth A. Foon, 2012-12-06 Where do you begin to look for a recent authoritative article on the diagnosis or management of a particular malignancy The few general oncology textbooks are generally out of date Single papers in specialized journals are informative but seldom comprehensive these are more often preliminary reports on a very limited number of patients Certain general journals frequently publish good indepth reviews of cancer topics and published symposium lectures are often the best overviews available Unfortunately these reviews and supplements appear sporadically and the reader can never be sure when a topic of special interest will be covered Cancer Treatment and Research is a series of authoritative volumes which aim to meet this need It is an attempt to establish a critical mass of oncology literature covering virtually all oncology topics revised frequently to keep the coverage up to date easily available on a single library shelf or by a single personal subscription We have approached the problem in the following fashion First by dividing the oncology literature into specific subdivisions such as lung cancer genitourinary cancer pediatric oncology etc Second by asking eminent authorities in each of these areas to edit a volume on the specific topic on an annual or biannual basis Each topic and tumor type is covered in a volume appearing frequently and predictably discussing current diagnosis staging markers all forms of treatment modalities basic biology and more **Current Catalog** National Library of Medicine (U.S.), First multi year cumulation covers six years 1965 70 **Journal of the National Cancer Institute**, 1989 **National Library of Medicine Current Catalog** National Library of Medicine (U.S.), 1989 **Molecular Genetics and Therapy of Leukemia** Emil J. Freireich, Hagop Kantarjian, 2012-12-06 Leukemia is a malignant disease which continues to play a cutting edge role in the discovery of new basic knowledge about the malignant process and about the potential for controlling these malignant diseases Molecular Genetics and Therapy of Leukemia presents contributions by leading investigators and scientific contributors to such topics as chromosome 16 chromosome 5 the BCL 2 gene 11q23 breakpoint leukemias the p 53 suppressor gene and oncogene hematopoietic stem cells cytokines detection of minimal residual disease in acute lymphoblastic leukemia autologous marrow transplantation the retinoblastoma gene allogeneic bone marrow transplant and chemotherapy of acute lymphoblastic leukemia *Leukemia: Advances in Research and Treatment* Emil J. Freireich, Hagop Kantarjian, 1993-03-31 Leukemia continues to offer the scientist a unique opportunity to gain new knowledge about the malignant transformation As a result this multi authored volume devoted to advances which have occurred over the last seven years provides the reader with an important new understanding of leukemia but perhaps even more important predicts analogous new developments in the other malignant diagnoses In this respect this volume represents the cutting edge of cancer research This text is unique in that it includes in a single volume the leading contributors to their respective fields covering what the editors feel are the major advances in our knowledge of the biology and therapy of leukemia over the last

seven years *Regulatory Mechanisms in Breast Cancer* Marc E. Lippman, Robert B. Dickson, 2012-12-06 In *Breast Cancer Cellular and Molecular Biology* Kluwer Academic Publishers 1988 we tried to present an introduction to the emerging basic studies on steroid receptors oncogenes and growth factors in the regulation of normal and malignant mammary epithelium The response to this volume was superb indicating a tremendous interest in basic growth regulatory mechanisms governing breast cancer and controlling its malignant progression In the two years since its publication much new and exciting information has been published and the full interplay of regulatory mechanisms is now beginning to emerge We have divided this book into four sections that we hope will unify important concepts and help to crystallize areas of consensus and or disagreement among a diverse group of basic and clinical scientists working on the disease The first section is devoted to studies on oncogenes antioncogenes proliferation and tumor prognosis The first chapter by Sunderland and McGuire introduces the characteristics of breast cancer as studied by pathologists to establish prognostic outcome Of particular interest is a new proto oncogene called HER 2 or neu which is rapidly becoming accepted as a valuable new tumor marker of poor prognosis The second chapter by Lee Bookstein and Lee introduces the best known antioncogene the retinoblastoma antioncogene whose expression is sometimes lost in breast cancer Malignant progression appears to be influenced by the balance of proto oncogene and antioncogene expression Recent Advances in Cell Biology of Acute Leukemia Wolf-Dieter Ludwig, Eckhard Thiel, 2012-12-06 The development of new techniques such as immunophenotyping cytogenetic investigations and more recently molecular studies has considerably increased our diagnostic repertoire and broadened our ideas about the biology of acute leukemias While immunophenotyping with monoclonal antibodies has yielded increased diagnostic precision and made it possible to develop a highly reproducible classification of acute leukemias based on cell biological features further insights have been gained into the pathogenetic mechanisms involved in leukemogenesis by means of cytogenetic detection of acquired structural chromosomal abnormalities Analysis of the leukemia associated chromosomal breakpoints using molecular techniques can now pinpoint many genomic sites essential for normal development and maturation of hematopoietic cells but functionally disrupted in leukemic cells The main goal of the international workshop that we held in Berlin with a select group of scientists and clinicians involved in leukemia research was to describe the state of the art and new developments in the immunologic cytogenetic and molecular characterization of acute leukemias and to discuss the clinical importance of cell biological features After introductory survey lectures dealing with the immunological and molecular biological characteristics of normal vs malignant lymphatic and myeloid progenitor cells the workshop centered on contributions characterizing the immunophenotype and both numerical and structural chromosomal abnormalities in acute leukemias **New Drugs, Concepts and Results in Cancer Chemotherapy** Franco M. Muggia, 2012-12-06 *Adjuvant Therapy of Breast Cancer* I. Craig Henderson, 2012-12-06 The results of randomized trials evaluating the use of early or adjuvant systemic treatment for patients with resectable breast cancer provide an eloquent

rebuttal to those who would argue that we have made no progress in the treatment of cancer Many of the tumors that we have been most successful in curing with chemotherapy and other newer forms of treatment are relatively uncommon In contrast breast cancer continues to be the single most common malignancy among women in the western world is increasingly a cause of death throughout Asia and Third World countries and remains one of the most substantial causes of cancer mortality world wide The use of mammography as a means of early detection has been shown to reduce breast cancer mortality by 25 35% among those populations in which it is utilized The use of adjuvant systemic treatment in appropriate patients provides a similar and additional reduction in breast cancer mortality Few subjects have been so systematically studied in the history of medicine and it seems fair to conclude that the value to adjuvant systemic therapy in prolonging the lives of women with breast cancer is more firmly supported by empirical evidence than even the more conventional or primary treatments using various combinations of surgery and radiotherapy *Cumulated Index Medicus* ,1977

Childhood Leukemias Ching-Hon Pui,1999-08-13 Childhood Leukemias edited by Dr Ching Hon Pui is the most clinically oriented and authoritative reference dedicated to these diseases **Bone Marrow Transplantation** Richard Champlin M.D.,2012-12-06 Bone marrow transplantation has emerged as a major form of treatment for a broad range of human diseases Marrow transplantation has many unique biologic features and its principles differ markedly from the transplantation of solid organs This volume overviews the present status of bone marrow transplantation and summarizes recent progress and controversies Advances in defining the underlying biology of marrow transplantation are discussed The current status of several major clinical problem areas are reviewed including engraftment acute and chronic graft versus host disease immunodeficiency and opportunistic infections The therapeutic role of allogeneic and autologous bone marrow transplantation is discussed and results are compared with alternative therapies IX List of contributors ANASETII CLAUDIO M D Fred Hutchinson Cancer Research Center 1124 Columbia Street Seattle Washington 98104 APPELBAUM FRED M D Fred Hutchinson Cancer Research Center 1124 Columbia Street Seattle Washington 98104 ARMITAGE JAMES O M D Department of Internal Medicine University of Nebraska Medical Center 42nd and Dewey Avenue Omaha Nebraska 68105 BEATY PATRICK G M D Fred Hutchinson Cancer Research Center 1124 Columbia Street Seattle Washington 98104 BIERMAN PHILIP J M D Department of Internal Medicine University of Nebraska Medical Center 42nd and Dewey Avenue Omaha Nebraska 68105 BUTTURINI ANNA M D Department of Pediatrics University of Parma School of Medicine Parma Italy CHAMPLIN RICHARD M D **Oncogenes and Tumor Suppressor Genes in Human Malignancies** Christopher Benz,E.T. Liu,2012-12-06 The first edition of Oncogenes 1989 focused on several of the better known transforming mechanisms and surveyed a spectrum of solid tumors and hematologic malignancies Several of the nearly 50 known oncogenes most relevant to human disease were examined In contrast this volume presents a very different profile and balance of subject material that reflects the rapidly changing field of molecular oncology and its newly emerging concepts

Among the most important discoveries of the past 4 years are the identification of nearly a dozen different tumor suppressor genes and the finding of an entirely new class of cancer causing gene bcl 2 that acts by inhibiting cell death rather than stimulating cell proliferation This edition begins by reviewing selected malignancies in which our earlier search for clinically relevant oncogenes has led to more focused studies on gain of function and loss of function genetic abnormalities as well as autocrine and paracrine growth factor loops known to regulate tumor physiology and malignant cell behavior Curiously many of these genetic and functional abnormalities are shared by several different tumor types and are not uniformly present in all tumors of the same type This observation brings up molecular questions about the tissue specific determinants that underlie individual cancers and also gives added impetus to the suggestion that molecular abnormalities referred to as tumor markers be included among the histopathologic features used for clinical diagnosis and management

Biomedical Platforms

Peter Keating,Alberto Cambrosio,2003 An examination of postwar medicine based on the notion of the biomedical platform the theoretical and clinical meeting ground between the normal and the pathological Soft Tissue Sarcomas: New Developments in the Multidisciplinary Approach to Treatment H.M. Sugarbaker,2012-12-06 Gastric cancer has been one of the great malignant scourges affecting mankind for as long as medical records have been kept Until operative resection pioneered by Bilioth and others became available no effective treatment was feasible and death from cancer was virtually inevitable Even with resection by total gastrectomy the chances of tumor eradication remained small Over recent years however the situation has been changing Some changes have resulted from better understanding of the disease early detection and better management techniques with applied clinical research but the reasons for other changes are poorly

understood For example the incidence of gastric cancer is decreasing especially in westernized societies where it has fallen from one of the most common cancers to no longer being in the top five causes of cancer death Still it remains the number one killer of adult males in Japan and Korea Whether the reduced incidence in western societies is a result of dietary changes or methods of food preservation or some other reason is as yet uncertain Improvements in outcome have been reported from mass screening and early detection more refined techniques of establishing early diagnosis tumor type and tumor extent more radical surgical resection and resection at earlier stages of disease

Oncogenes C.C. Benz, E.T. Liu, 2012-12-06 Where do you begin to look for a recent authoritative article on the diagnosis or management of a particular malignancy The few general oncology text books are generally out of date Single papers in specialized journals are informative but seldom comprehensive these are more often preliminary reports on a very limited number of patients Certain general journals frequently publish good in depth reviews of cancer topics and published symposium lectures are often the

best overviews available Unfortunately these reviews and supplements appear sporadically and the reader can never be sure when a topic of special interest will be covered Cancer Treatment and Research is a series of authoritative volumes that aim to meet this need It is an attempt to establish a critical mass of oncology literature covering virtually all oncology topics revised frequently to keep the coverage up to date and easily available on a single library shelf or by a single personal subscription We have approached the problem in the following fashion first by dividing the oncology literature into specific subdivisions such as lung cancer genitourinary cancer pediatric oncology etc and second by asking eminent authorities in each of these areas to edit a volume on the specific topic on an annual or biannual basis Each topic and tumor type is covered in a volume appearing frequently and predictably discussing current diagnosis staging markers all forms of treatment modalities basic biology and more
