Immunopharmacology And The Regulation Of Leukocyte Function:

Immunopharmacology and the Regulation of Leukocyte Function David R. Webb, 1982 *Immunopharmacology and The Regulation of Leukocyte Function* David R. Webb, 1982 National Library of Medicine Current Catalog National Library of Medicine (U.S.), 1983 *Current Catalog* National Library of Medicine (U.S.), 1983 First multi year cumulation covers six years 1965-70 **Affect Regulation and the Origin of the Self** Allan N. Schore, 2015-11-19 For over three decades Allan N. Schore has authored numerous volumes, chapters, and articles on regulation theory, a biopsychosocial model of the development, psychopathogenesis, and treatment of the implicit subjective self. The theory is grounded in the integration of psychology, psychiatry, and neuroscience, and it is now being used by both clinicians to update psychotherapeutic models and by researchers to generate research. First published in 1994, this pioneering volume represented the inaugural expression of his interdisciplinary model and has since been hailed by a number of scientific and clinical disciplines as a groundbreaking and paradigm-shifting work. This volume appeared at a time when the problem of emotion, ignored for most of the last century, was finally beginning to be addressed by science, including the emergent field of affective neuroscience. After a century of the dominance of the verbal left brain, it presented a detailed characterization of the early-developing right brain and its unique social, emotional, and survival functions, not only in infancy but across all later stages of the human life span. It also offered a scientifically testable and clinically relevant model of the development of the human unconscious mind. *Affect Regulation and the Origin of the Self* acts as a keystone and foundation for all of Schore's later writings, as every subsequent book, article, and chapter that followed represented expansions of this seminal work. **Immunodiagnosis of Cancer** Ronald E. Herberman, Donald W. Mercer, 2017-11-22 Updated to reflect changes in the field since publication of the first edition in 1979. Provides a detailed review of the methodology available for assessing the diagnosis and prognosis of cancer patients, including data on the application of tumor marker assays and other immunodiagnostic procedures. **Bacterial Endotoxic Lipopolysaccharides** David C. Morrison, John L. Ryan, 1992-08-05 *Bacterial Endotoxic Lipopolysaccharides* provides an up-to-date two-volume review of the latest information regarding bacterial lipopolysaccharide structure and activities. These volumes cover the biochemistry, pharmacology, and pathophysiologic properties of endotoxins. The volumes also thoroughly discuss the strengths and weaknesses of new therapies for septic shock that are based on an immunological attack on endotoxins and the cytokines induced by endotoxins. All scientists involved in endotoxin research, clinical infectious disease specialists, and medical students interested in the pathogenesis of septic shock will find *Bacterial Endotoxic Lipopolysaccharides* invaluable as a reference resource. *The Lactoperoxidase System* Kenneth Pruitt, 2020-11-25 This book reviews the major biochemical and biological properties of the lactoperoxidase system, including both the bovine milk and human salivary enzymes. It focuses on the basic chemistry of peroxidase-catalyzed reactions and clinical applications of the peroxide system's antimicrobial effects. **Infection** M.R. Escobar, J.P. Utz, 2013-11-11 This comprehensive treatise on the

reticuloendothelial system is a project jointly shared by individual members of the Reticuloendothelial RE Society and biomedical scientists in general who are interested in the intricate system of cells and molecular moieties derived from those cells that constitute the RES. It may now be more fashionable in some quarters to consider these cells as part of what is called the mononuclear phagocytic system or the lymphoreticular system. Nevertheless, because of historical developments and current interest in the subject by investigators from many diverse areas, it seems advantageous to present in one comprehensive treatise current information and knowledge concerning basic aspects of the RES such as morphology, biochemistry, phylogeny and ontogeny, physiology and pharmacology, as well as clinical areas including immunopathology, cancer, infectious diseases, allergy and hypersensitivity. It is anticipated that by presenting information concerning these apparently heterogeneous topics under the unifying umbrella of the RES, attention will be focused on the similarities as well as interactions among the cell types constituting the RES from the viewpoint of various disciplines. The treatise editors and their editorial board, consisting predominantly of the editors of individual volumes, are extremely grateful for the enthusiastic cooperation and enormous task undertaken by members of the biomedical community in general and especially by members of the American as well as European and Japanese Reticuloendothelial Societies.

Immunopharmacology Peter A. Miescher, Liana Bolis, M. Ghione, 1985 Antibiosis and Host Immunity Andor Szentivanyi, Herman Friedman, Günther Gillissen, 2012-12-06. This book contains 32 chapters based on the corresponding papers delivered at the International Symposium on Antimicrobial Agents and Immunity held in Siena, Italy, on May 2-4, 1985, as a Satellite Symposium of the Third International Conference on Immunopharmacology held in Florence, Italy, on May 6-10, 1985. As editors, we express our profound appreciation and gratitude to the authors who have contributed so richly to this volume and we think that it may not be too much to hope that a new cadre of investigators and students will share this gratitude for these records of experience and insight into antibiotic and host-parasite interactions. We owe a very special gratitude to Mrs. Christine Abarca for her outstanding editorial assistance in the preparation of this book.

Molecular Aspects of Inflammation Helmut Sies, Leopold Flohe, Guido Zimmer, 2012-12-06

Understanding the molecular basis of complex biological processes has been a major goal of biological chemistry from early on. Inflammation is such one entity and recent years have seen exciting progress in the understanding of molecular interactions. There has been a long way from *dolor rubor calor* and tumor as a fundamental description of the phenomenon to current knowledge on e.g. the control of the respiratory burst of the granulocyte, the atomic details of protease regulation or the interaction of cytokines. The book is organized in the order of increasing complexity starting out with the key phenomena of the inflammatory response and its modulation by cytokines to intravascular events and shock and sepsis. Thus the current attempts to apply basic knowledge on mediators of inflammation to the clinical situation were also considered.

Psychoneuroimmunology Robert Ader, 2014-06-28 Psychoneuroimmunology Second Edition presents reports on the relationship between the nervous and immune systems. The book is divided into four sections. The first section details the role of neural structures and neurotransmitter signals in communication with the immune system. It documents the extensive neural connections with organs of the immune system, the dynamics of noradrenergic sympathetic innervation of spleen and thymus and the evidence for immune signaling of the CNS. Part II elaborates the role of hormones in the modulation of immune functions, the basis for bidirectional communication between the neuroendocrine and immune systems and the potential physiological implications of these neuroendocrine-immune system interactions. The third part addresses behavioral influences on immune response, the effects of conditioning stress and social interactions in modulating immune responses and the behavioral consequences of experimentally altered or genetically determined immunologic states. The final section presents the effects of psychosocial factors on immune responses and the potential impact of behavioral interventions in modulating immunity in healthy human subjects and in patients with AIDS. Neuroscientists, endocrinologists and immunologists will find the book interesting.

Animal Stress Gary P Moberg, 2013-05-27 Based on a recent symposium that brought together experts in behavior, nutrition, physiology, immunology and human and animal medicine, this volume presents an up-to-date discussion of the problems and methods of studying animal stress today. Section one reviews the evolutionary and ontogenetic determinants of animal suffering and the assessment of well-being. The second section examines biological responses to stress and methods of monitoring stress in animals. Section three shows how stress can threaten animal health, disrupt normal reproduction and influence growth and metabolism. The final section relates the importance of animal stress to developing guidelines on the use of animals in scientific research. This is an invaluable reference for exploring these complex responses.
