Impossible Objects:

Special Objects Maria J. García-Encinas, Fernando Martínez-Manrique, 2025-03-05 This book proposes a different perspective on actual queries within the field of ontology Focusing on non standard objects it offers original answers to classic problems in metaphysics such as individuation reference existence and non existence The chosen ontological fields are for this purpose ontologies that essentially involve human social practices such as intentional objects fictions mental illnesses or social entities Even though the papers can be read independently readers will discover a number of original intersections that provide fresh points of entry to contemporary metaphysical issues By dealing with entities that are not so frequently addressed in related works the book also contributes to broaden their perspective on ontology Both scholars and students will find it particularly useful to have a survey about non standard abstract entities that can provide new topics for their research

Subjects and Objects Jeffrey Strayer, 2007-04-30 The subject matter of *Subjects and Objects* is the limits of Abstraction in art The notion of Abstraction its development in art history and the relation of art and philosophy regarding Abstraction are considered in addition to identifying and examining things that are essential to artworks Any artwork has an identity and comprehension of that identity depends on a perceptual object A subject's apprehension of such an object creates an artistic complex of which the object the subject and the apprehension are constituents The essential elements of this kind of complex are the subject of the final part of the work Its concluding section considers these elements as material to be used to determine the limits of Abstraction

Philosophical Analysis in Latin America J.J. Gracia, E. Rabossi, Enriq Villanueva, Marcelo Dascal, 2012-12-06 Historians of Latin American philosophy have paid relatively little attention to the development of philosophical analysis in Latin America There are two reasons for this neglect First they have been primarily concerned with the formative period of philosophical development in particular with the so called founders of Latin American philosophy And second philosophical analysis did not become a noticeable philosophical trend in Latin America until recent years True a number of Latin American philosophers took notice of Moore Russell the members of the Vienna Circle and other important figures in the analytic movement quite early But these were isolated instances that lacked the sustained effort and broad base indispensable to make a serious impact in the development of Latin American philosophy That has changed now There are not only good numbers of philosophers who work within the analytic tradition but also some journals and institutes dedicated to the analytic mode of philosophizing It is therefore most appropriate to publish a collection of articles which would introduce the reader of philosophy to the most representative analytic material produced so far in Latin America Indeed it is not only appropriate but also necessary since most of the published analytic literature to date is scattered in various journals sometimes of difficult access Moreover not all that has been published is representative of the best already produced and of the potential that the movement has in Latin America

Possible Worlds Rod Girle, 2014-12-18 Ever since Saul Kripke and others developed a semantic interpretation for modal logic possible worlds has been a much debated issue in contemporary metaphysics To propose the idea of a possible world that differs in some way from our actual world for example a world where the grass is red or where no people exist can

help us to analyse and understand a wide range of philosophical concepts such as counterfactuals properties modality and of course the notions of possibility and necessity This book examines the ways in which possible worlds have been used as a framework for considering problems in logic and argument analysis The book begins with a non technical introduction to the basic ideas of modal logic in terms of Kripke's possible worlds and then moves on to a discussion of possible for and possible that The central chapters examine questions of meaning epistemic possibility temporal logic metaphysics and impossibility Gärdenfors also investigates how the idea of a possible world can be put to use in different areas of philosophy the problems it may raise and the benefits that can be gained *Being* Peter van Inwagen, 2022-11-24 For millennia philosophers have debated about the existence of things not only the existence of things like God demons and the soul but things like mathematical objects qualities and attributes or merely possible states of affairs and people Ontology is the present day name for the part of philosophy that addresses such questions Being attempts to answer these old questions and the question of how one should go about attempting to answer them This book presents and defends a meta ontology and an ontology Quine has taught us to use the word ontology as a label for the part of philosophy that addresses the ontological question What is there Meta ontology then is the part of philosophy that addresses two questions What is it to be or to exist and How should one attempt to answer the ontological question Chapters 1 and 5 are devoted to meta ontology Chapter 1 to a defense of the neo Quinean meta ontology Chapter 5 to an examination of various alternative meta ontologies The essence of neo Quineanism is that x exists and Something is x and The number of things that are x is not 0 mean more or less the same thing Neo Quineanism obviously entails that there are no non-existent things for nothing is such that nothing is it and everything is such that the number of things identical with it is 1 Chapter 2 is an examination of various positions that imply that there are non-existent things The topic of Chapter 3 is the ancient problem of universals or the problem of the existence and nature of abstract objects Chapter 4 is devoted to questions concerning possible worlds and other objects belonging to the ontology of modality Math Insights Tb S1b S/e, 2007 The School of Alexius Meinong Liliana Albertazzi, Dale Jacquette, 2017-07-05 This book presents an historical and conceptual reconstruction of the theories developed by Meinong and a group of philosophers and experimental psychologists in Graz at the turn of the 19th century Adhering closely to original texts the contributors explore Meinong's roots in the school of Brentano complex theories such as the theory of intentional reference and direct reference and ways of developing philosophy which are closely bound up with the sciences particularly psychology Providing a faithful reconstruction of both Meinong's contributions to science and the school that arose from his thought this book shows how the theories of the Graz school raise the possibility of engaging in the scientific metaphysics and ontology that for so long have been considered off limits *ICGG 2024 - Proceedings of the 21st International Conference on Geometry and Graphics* Kazuki Takenouchi, 2024-09-26 This three volume book gathers peer reviewed papers presented at the 21st International Conference on Geometry and Graphics ICGG 2024 held in Kitakyushu Japan on August 5-9 2024 The

conference started in 1978 and is promoted by the International Society for Geometry and Graphics which aims to foster international collaboration and stimulate the scientific research and teaching methodology in the fields of Geometry and Graphics The ICGG 2024 covered the following five topics taken over from ICGG 2022 Theoretical Graphics and Geometry Applied Geometry and Graphics Engineering Computer Graphics Graphics Education Geometry and Graphics in History to which a Related Topic section was added in response to the growing body of research on Geometry and Graphics Volume 1 collects papers on three of these topics Theoretical Graphics and Geometry Graphics Education and Related Topics Given its breadth of coverage the book introduces engineers architects and designers interested in computer applications graphics and geometry to the latest advances in the field with a particular focus on science the arts and mathematics education
