Just A Thought Understanding The Subtleties Of Life:

Critical Conditions Horace L. Fairlamb, 1994-05-26 The postmodern debate has been heavily influenced by often contradictory conclusions about the foundations of knowledge hermeneutics challenges epistemology politics challenges science identity theory challenges critical theory pragmatism challenges formalism and so on Horace Fairlamb contends that philosophy's foundationist quest has usually been misconceived as a choice between a super science and theoretical anarchy Through an examination of the history of foundationism and detailed analysis of the work of leading theorists including Fish Foucault Derrida Gadamer and Habermas Dr Fairlamb argues for a less reductive and less arbitrary conception of knowledge and meaning The result in this 1994 book is a sophisticated critique of contemporary theory with implications for philosophers as well as literary theorists and an important contribution to the re evaluation of theoretical discourse

ULTIMATE THOUGHT - Life in a bicausal univers A. R. Bordon, Scientific and Technological Thinking

Michael E. Gorman, Ryan D. Tweney, David C. Gooding, Alexandra P. Kincannon, 2004-09-22 At the turn of the 21st century the most valuable commodity in society is knowledge particularly new knowledge that may give a culture company or laboratory an adaptive advantage Knowledge about the cognitive processes that lead to discovery and invention can enhance the probability of making valuable new discoveries and inventions Such knowledge needs to be made widely available to ensure that no particular interest group corners the market on techno scientific creativity Knowledge can also facilitate the development of business strategies and social policies based on a genuine understanding of the creative process Furthermore through an understanding of principles underlying the cognitive processes related to discovery educators can utilize these principles to teach students effective problem solving strategies as part of their education as future scientists This book takes the reader out onto the cutting edge of research in scientific and technological thinking The editors advocate a multiple method approach chapters include detailed case studies of contemporary and historical practices experiments computational simulations and innovative theoretical analyses The editors attempt a provocative synthesis of this work at the end In order to achieve true scientific and technological progress an understanding of the process by which species are transforming the world is needed This book makes an important step in that direction by leading to breakthroughs in the understanding of discovery and invention

The Ethics Class Bob Hausladen, 2003 Within the United States and throughout the world there is an abundance of rhetoric about the importance of education The idea that education is vitally important seems obvious However often missing in the rhetoric is a true appreciation of the depth and complexity of what it actually means to be educated How does education happen The Ethics Class offers no clear cut answers What it does offer is an open ended exploration of this depth and complexity through conversation poetry and metaphor It is simply one possible exploration Topics include among others responsibility character indoctrination acting vs being emotion spirituality relationship and rationality At this moment in human history basic questions about humanity and the state of the world seem particularly

poignant Addressing these questions intelligently may be necessary for all of our survival The Ethics Class ponders what it might mean to intelligently address **The saints' everlasting rest; The divine life; and Dying thoughts; also, A call to the unconverted; and Now or never.
